## Survey of Individual Users of MEDLINE® Available

NLM conducted a survey (from October 2, 1987 to December 10, 1987) of its end-user population. This survey was an initial attempt to determine the characteristics of individual users of MEDLINE, their methods of access to the system, their reasons for searching, and their level of satisfaction with current system features and capabilities. The information gathered will be used to identify improvements that can provide a better level of information service to U.S. health professionals.

The results of this survey have been published and are available from the National Technical Information Service. The publication number is PB-89-133722/GBB. The price is \$21.95 (\$43.90 non-U.S.); there is a \$3.00 (U.S./Canada) shipping and handling charge required for each order (\$4.00 non-U.S.). Please send remittance with orders to:

National Technical Information Service (NTIS)

## Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual, 1988 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections as well.

### GRATEFUL MED<sup>®</sup>, VERSION 4.0

Distribution of GRATEFUL MED, Version 4.0 began on December 19, 1988. New versions have been sent free of charge to all who purchased earlier versions of

the program. All new orders for GRATEFUL MED are now being filled with Version 4.0. If an earlier version was purchased, but Version 4.0 has not been received, please contact NTIS at (703) 487-4660.

### DATABASES AVAILABLE WITH 1989 MESH<sup>®</sup>

The following databases should now be searched using the 1989 MeSH<sup>®</sup> vocabulary:

- MEDLINE<sup>®</sup> (and its Backfiles), HEALTH<sup>®</sup>, CATLINE<sup>®</sup>, and AVLINE<sup>®</sup> were updated with 1989 MeSH effective December 12.
- AIDSLINE was made available with 1989 MeSH on December 23.
- CANCERLIT<sup>®</sup> was made available with 1989 MeSH effective December 15. The searching default in CANCERLIT is now MeSH Headings (MH). Searchers no longer need to qualify MeSH Headings. Text Words (TW), however, will now need to be qualified in CANCERLIT.
- BIOETHICSLINE<sup>®</sup> was made available with 1989 MeSH on February 8.

The following databases will be regenerated with MeSH headings in the next month:

- The TOXLINE<sup>®</sup> family of databases will be regenerated in early March 1989. TOXLINE still has 1988 MeSH on most records in the TOXBIB subfile. The TOXLINE updates from 8812 (EM) forward include TOXBIB records with 1989 MeSH Vocabulary. Users need to plan search strategies that allow for the existence of both 1988 and 1989 indexing terms in TOXLINE until the files are regenerated.
- POPLINE is scheduled to be available with 1989 MeSH in February or March. The online NEWS will have further information.

### CUMULATED INDEX MEDICUS

The 1988 *Cumulated Index Medicus*, volume 29 may now be ordered from the U.S. Government Printing Office. Delivery is expected in late April. The stock number is S/N 617-052-00276-1; the U.S. price is \$250 (\$312.50 non-U.S.). Orders should be sent to:

Superintendent of Documents  
 U.S. Government Printing Office  
 Washington, DC 20402  
 (202) 783-3238

**INDEX MEDICUS, MeSH, LJI 1989**

As announced in the October *NLM Technical Bulletin*, *Index Medicus* monthly issues will be bound in two parts beginning with the January 1989 issue. The annual subscription rate is \$230 (\$287.50 non-U.S.); GPO List ID: IM89. In addition to the monthly issues, subscribers also receive *Medical Subject Headings* and the *List of Journals Indexed in Index Medicus* ("LJI") as part of the January issue. Information for ordering separate copies of these titles appears below. Order from: Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, (202) 783-3238.

o *Medical Subject Headings*, 1989 ("Black and White" MeSH). The price is \$42 (\$52.50 non-U.S.). Order after February 1. This publication is for use with the printed *Index Medicus*. Online searchers should use the *Medical Subject Headings--Annotated Alphabetic List*, 1989 instead. (Ordering information for the *Annotated MeSH* was provided in the September 1988 issue of the *NLM Technical Bulletin*.)

o *List of Journals Indexed in Index Medicus*, 1989. The price is \$11.00 (\$13.75 non-U.S.). Order after February 1. Online searchers may want to use the *List of Serials Indexed for Online Users* instead.

**IMPORTANT NOTICE FOR INDEX MEDICUS SUBSCRIBERS**

The January 1989 *Index Medicus* issue, Part 1 (Subject Section) and Part 2 (Author/Bibliography of Medical Reviews Section) has been delayed. Mailing is now scheduled for early March. It is expected that the regular issues for February and March will follow soon thereafter.

**LIST OF SERIALS INDEXED FOR ONLINE USERS 1989**

The *List of Serials Indexed for Online Users*, 1989 may now be ordered from the National Technical

Information Service (NTIS). Delivery is expected in March. The publication number is PB89-135610/GBB. The hardcopy price is \$20.50 (\$41.00 non-U.S.); the microfiche price is \$6.95 (\$13.90 non-U.S.). There is a \$3.00 (U.S./Canada) shipping and handling charge required for each order (\$4.00 non-U.S.). Please send remittance with orders to:

National Technical Information Service (NTIS)  
 5285 Port Royal Road  
 Springfield, VA 22161  
 (703) 487-4650 (for telephone orders with deposit account or credit card)

**NEW PRINT FORMAT FOR SERLINE®**

A new print format, PRINT FILM, has been added for the SERLINE database. PRINT FILM or PRT FI includes the following data elements: TI, FL, PL, PU, GN, QDA, QV, QY, FDA, FMR, FV, FY, FNO, UI.

**NEW DBIR DATABASE AVAILABLE ON TOXNET**

A new database, the Directory of Biotechnology Information Resources (DBIR), was mounted on the TOXNET system on January 23. This file is produced by the Bioinformatics Department of American Type Culture Collection in Rockville, Maryland under contract with NLM. DBIR is a multi-component databank containing information on a wide range of resources related to biotechnology. These resources include online databases and networks, organizations, collections, and repositories of cells and subcellular elements, and selected publications. DBIR also identifies groups and agencies working on issues of nomenclature in biotechnology and molecular biology. The database now contains about 400 records, but it is expected that this number will grow to nearly 1,000 within two years. DBIR will also soon be publicly available as a subset of the Library's DIRLINE file. The February issue of the *NLM Technical Bulletin* will contain a detailed article about this new file.

**ETICBACK DATABASE AVAILABLE ON TOXNET**

On January 30 ETICBACK, the backfile of the Environmental Teratology Information Center database became available on TOXNET. ETICBACK is a

bibliographic database which includes references to articles on birth defects and reproductive and developmental toxicology from 1950-1988. Some older references are included, as well. Records include complete bibliographic citations, specialized indexing keywords, and Chemical Abstracts Service Registry Numbers for chemicals. Current teratology references will be included in the ETIC database which will become available on TOXNET in the Spring. The ETIC database is produced by the Environmental Mutagen, Carcinogen, and Teratogen Information Program of the Oak Ridge National Laboratory and is funded by several agencies of the federal government. ETICBACK can be accessed by typing FILE ETICBACK at any TOXNET user prompt. More information on ETIC and ETICBACK will be found in the February issue of the *NLM Technical Bulletin*.

#### VIDEOCASSETTES AVAILABLE ON CD-ROM

The National Library of Medicine (NLM) recently released copies of a number of videocassettes derived from a meeting held at the NLM in September 1988 to evaluate MEDLINE on CD-ROM. The evaluation forum, "MEDLINE on CD-ROM," included research reports from 21 evaluation sites. It provided an opportunity for CD-ROM users and vendors to explore issues of common interest. The presentations were made primarily in panel format. The videotapes which document this meeting are available as a group or individually for loan from the

Regional Medical Libraries (RML). All have been issued in both 3/4" and 1/2" formats, so be sure to specify the desired format in the request. Call numbers are included.

#### MEDLINE on CD-ROM

- o Rose Marie Woodsmall, Becky Lyon-Hartman. MEDLINE on CD-ROM: introduction. Z 699.5.M39 VC no.4.1 1988
- o Nancy K. Roderer. CD-ROM in the health sciences library: users and uses. Z 699.5.M39 VC no.4.2 1988
- o Prudence W. Dalrymple. CD-ROM in the clinical setting: users and uses. Z 699.5.M39 VC no.4.3 1988
- o Paul B. Kantor. Assessing the costs. Z 699.5.M39 VC no.4.4 1988
- o Nancy N. Woelfl. Systems: features and capabilities. Z 699.5.M39 VC no.4.5 1988
- o William David Penniman. Vendors: lessons learned and future plans here and abroad. Z 699.6.M39 no.4.6 1988
- o William David Penniman. Putting it all in perspective. Z 699.5.M39 VC no.4.7 1988.

# Payments for MEDLARS Service

Walter L. Finch, Director, Office of Product Management, NTIS

The National Technical Information Service (NTIS) has made a number of improvements in its accounting system for MEDLARS users. Major enhancements to the system allow payments to be posted within 24 hours of receipt and invoices to be mailed promptly. Every MEDLARS user should now be receiving complete, accurate and up-to-date information. Figure 1 represents the invoice form that was slightly changed when the new system became active. Statements for deposit accounts reflect similar changes.

Although the system has been operating effectively for many months, the timely processing of payments is dependent upon NTIS receiving complete information from the user. Unfortunately, NTIS is continuing to receive payments for online services that cannot be processed because of insufficient information. To insure that payments are promptly and correctly credited to the NTIS account, please send the upper portion of the invoice with the payment or write the User ID code which appears directly above the agency/institution name and address (see Figure 1) on the payment. If payment is sent for more than one account, indicate the amount to be applied to each individual account. A properly identified payment will be entered into the system within 24 hours of receipt and will be reflected on the next invoice. Therefore, please supply sufficient identifying information with payments. For questions about the account please contact NTIS Billing at (703) 487-4770.

Figure 1

**VERSION 4.0**

[Editor's Note: Each month the NLM Technical Bulletin features a column concerning GRATEFUL MED, often consisting of questions/answers. Contributions for this column will be appreciated.]

*I've been using Version 3.0 quite happily. Do I have to install my Version 4.0 when I receive it?*

We believe that it is important for users to install Version 4.0 as soon as possible. And, when it is up and running you should delete any previous versions so you or other users do not use them accidentally. This is necessary because Version 4.0 has numerous enhancements which make it an even better searching aid (see November issue). Prior versions of GRATEFUL MED are not like old versions of other types of software. Using an older version of GRATEFUL MED, could cause you to miss information. Here are some of the reasons for installing Version 4.0 as soon as possible:

1. Version 4.0 comes with the 1989 MeSH vocabulary. This includes new terms and also terms that replaced other terms.
2. Version 4.0 includes access to the new MEDLINE backfile, BACK86 (1986 & 1987 years of publication).
3. Version 4.0 includes access to both SDILINE (citations from the current month of MEDLINE) and AIDSLINE (AIDS-related citations.)
4. Version 4.0 is FREE to anyone who purchased an earlier version and is easy to install.
5. Technical support for Version 3.0 will be phased out.

*I haven't been able to connect to the computer to do a search. GRATEFUL MED dials and seems to connect but then I get the message, "Not Responding." I'm using TELENET with a 2400 baud modem.*

The problem may be an incompatibility between the speed of transmission and the network number you are using. There are two things a user with a 2400 baud modem can check on the Dialing Directory of the Telecommunications Data Entry Screen. (To get to this screen select: "CHANGE" from the ACTION screen and "Telephone numbers" from the list of "Selections.")

1. Be sure you are using a 2400 baud number if one is available for your city. 2400 baud numbers are noted in the Phones List by the dollar sign (\$). The Phones List is sent to each new user and is included quarterly with this publication.
2. Make sure the baud rate is set for 2400.

If not, you will need to select "Change or view an existing entry" and enter the number for the service you are trying to modify on your Dialing Directory. When you get to the "Change A Service" screen, change the communications speed to H meaning High which is 2400 baud.

If 2400 baud is not a choice, i.e., the choices for baud rate are: 300 baud/1200 baud, you will need to exit the program in order to "upgrade" this parameter. This is done by erasing your current parameters and starting again with the default values for Version 4.0 which include parameters for 2400 baud. Be sure you have your User ID, Password and network telephone numbers at hand in order to re-enter this information.

Steps: Exit the program.  
 Stay in the GM subdirectory and at the DOS prompt enter: DEL BLOGIN  
 At the next DOS prompt enter: SEARCH

You will then be led through SETUP, which is the part of the program where you input the network numbers, etc.

This brings up another point. Most cities have network numbers for both TELENET and TYMNET. Users should include telephone numbers for both in the dialing directory. This way if GRATEFUL MED cannot get through on one network, it can try the other.

Note: 2400 baud modem users can also operate at 1200 baud communications. If you elect to include 1200 baud numbers in your Dialing Directory, be sure to select L for low speed. The lower speed will not significantly increase the cost of your searches (see Sept. '88 column).

## TRI (Toxic Release Inventory) on TOXNET

Philip Wexler

Dorothy Stroup, Ph.D.

Toxicology Information Program, NLM

Scheduled to become part of NLM's TOXNET system sometime in the late Spring of 1989 is the TRI (Toxic Chemical Release Inventory) file. It will contain industry data submitted to the EPA (Environmental Protection Agency) on the amounts of toxic chemicals released to the environment or transferred to waste sites. This article will review the legislation leading up to TRI and outline, in general terms, the content of the file. A follow-up article will present the full unit record, discuss search strategies, and include sample searches.

TRI falls under Section 313 of the Emergency Planning and Community Right-to-Know Act, Title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA). The Right-to-Know concept first surfaced at the workplace. The Occupational Safety and Health Administration's (OSHA) Hazard Communication Rule was the culmination of much effort to improve worker safety. This rule emphasized the workers' rights to know about their exposures to hazardous chemicals, and provided for the means of guaranteeing these rights. A heightened awareness that the general public was also being exposed to potentially hazardous chemicals in the environment suggested that further legislation was necessary. The urgency of disclosing to citizens more information about chemicals in their communities reached a peak after the Bhopal, India, incident of 1984 in which the release of methyl isocyanate resulted in the deaths of 2500 people and the injury of many more. Two years later, SARA and the Emergency Planning and Community Right-to-Know Act, were in place.

Title III calls for the establishment of State Emergency Response Commissions and Local Emergency Planning Committees to develop comprehensive plans to deal with chemical emergencies. It also requires facilities to provide notification of emergency releases and make available to the EPA information on the hazardous chemicals they store and use. Section 313, which mandates the TRI file, contains provisions for reporting routine or accidental toxic chemical releases to the air, water, and soil. This reporting of any of some 320 chemicals is required of facilities which manufacture, process, or use more than certain "threshold" amounts of

the chemicals and which employ more than ten people. Many of the chemicals covered by TRI could pose long-term, chronic, health hazards. The law further required EPA to establish and maintain a publicly accessible computer file, based upon this data. After examining various alternatives, the EPA settled on NLM's TOXNET as the system of choice.

The file structure of TRI on TOXNET is generally based on Form R, the form on which industry is required to submit TRI data to EPA. Because each facility must submit a separate form for any of the listed chemicals, there will likely be many records for any given chemical or facility. In this respect, TRI differs from current TOXNET databanks, which contain one record per chemical. In addition to a category for administrative information, the TRI file will consist of the following five subject categories. Listed next to each is some of the data that will be included.

0 Facility Identification - Name and address of facility. Public contact and phone numbers. Other ID data such as Dun and Bradstreet Number and EPA Identification Number.

0 Substance Identification - Chemical-specific information including name of substance, CAS Registry Number, uses, and maximum amount on site.

0 Environmental Release of Chemical - Estimates of the amounts of chemicals released into the air (point and non-point emission), water, land, and by underground injection. The bases (e.g., monitoring data, mass balance calculations) of these estimates are also provided.

0 Waste Treatment - State of matter (e.g., gaseous, wastewater) of the general wastestream, method (e.g., flare, aerobic biological treatment), treatment efficiency, and waste minimization data.

0 Off-Site Waste Transfer - Names and addresses of publicly owned treatment works and other off-site locations to which chemical wastes are transferred, estimated amounts transferred, and bases of estimates.

TRI will be updated annually. The initial public file coming up this Spring will contain submissions for the 1987 reporting year. An estimated 74,000 records representing some 17,500 facilities will constitute this first-year file. TRI users will also have access to the entire family of TOXNET files, including the Hazardous Substances Data Bank, and NLM files outside of TOXNET, such as the TOXLINE/TOXLIT group,

which contain some 2.5 million references on literature related to toxic chemicals.

Users will be able to pose questions such as the following to TRI:

0 How much benzene was reported released to waterways in 1987 by Virginia industrial plants?

0 What waste minimization methods are reported by Marin County manufacturers of toluene?

0 What are the names and addresses of Baltimore Steel Plants importing vanadium?

The complete unit record, to appear in a later issue of this Bulletin, will look familiar to TOXNET users. The hierarchical category-header-field structure is retained. Subfields, used in existing TOXNET files only as organizing dividers (and known in those files as data tabs), will become individually searchable and printable in TRI. Commands for sorting, ranging and numerical manipulation of data will become available on TRI, and a menu-driven search package for inexperienced users is being developed. The TRI file will offer TOXNET users an opportunity to access unique and previously unavailable "chemical demographics" data.

## Serials Update

### INDEXED TITLES UPDATE, JANUARY 1989

The following titles cited in MEDLINE, HEALTH, and POPLINE have recently been selected for indexing, undergone a title change, or ceased publication. This list is not cumulative; the information provided is only for titles whose status has changed since the

last UPDATE. More detailed information may be found in SERLINE. For further information, please contact MMS or Ms. Esther Baldinger, (301) 496-1276, Technical Services Division, NLM.

January 31, 1989

Dear Domestic MEDLARS User:

This is to notify you that on March 1, 1989, the pricing structure of CHEMLINE and the TOXLIT files (TOXLIT and TOXLIT65) will be modified in response to changes in the 1989 royalty rates charged by Chemical Abstracts Service (CAS), the supplier of proprietary data for these files. The prices for these files also reflect the movement of BIOSIS and ASHP data from TOXLIT to the TOXLINE files.

To accommodate these changes, the NLM Online Pricing Algorithm has been updated in the Connect Charge, Search Statement Charge, and Citation Charge components. Based on usage patterns in 1988, we estimate that the approximate average hourly rate in Prime Time for CHEMLINE will be \$95, and that for TOXLIT and TOXLIT65 will be \$165. An individual's actual hourly rate will vary, of course, based on total resources used.

This year CAS has lowered its Connect Charge royalty, and raised its Online Citation Charge and Search Statement Charge royalties. The latter serves as an estimate of the number of Search Terms used. These changes are reflected in the updated NLM Online Pricing Algorithm.

Please see Table I on the reverse side of this letter for the new NLM rates for the six components of the online algorithm. Additionally, note that offline page charges have been increased due to royalty charges. NLM has not increased any of its component charges for these files. The NLM portion of the total price reflect the rate established for the October 1, 1987 MEDLARS Pricing Structure.

Sincerely yours,

Lois Ann Colaianni  
Associate Director  
Library Operations

Henry M. Kissman, Ph.D.  
Associate Director  
Specialized Information Services.

| TOXLIT & TOXLIT65 | \$44.10**                 | \$46.85** | \$0.54**                | \$0.41**               | \$0.01                                | \$0.07                                       | \$0.13 | \$0.08                              | \$0.12 |

\* Includes Royalties of \$39.00 Per Connect Hour, \$0.262 per Search Statement, \$0.39 per Online Citation.

\*\* Includes Royalties of \$39.00 Per Connect Hour, \$0.52 per Search Statement, \$0.40 per Online Citation.

NLM OFFLINE CHARGES TO DOMESTIC USERS 1/

|                   | Per Page |                                  |
|-------------------|----------|----------------------------------|
| CHEMLINE          | \$1.77   | (Includes \$1.52 Royalty Charge) |
| TOXLIT & TOXLIT65 | \$1.20   | (Includes \$0.95 Royalty Charge) |

AUTOMATIC SDI SEARCHES (plus page charges)

|        |        |   |
|--------|--------|---|
| TOXLIT | \$5.00 | Per search (Includes \$4.00 Royalty Charge) |
|--------|--------|---|

Current prime time is 10:00 AM to 5:00 PM Eastern Time, Monday through Friday.

All other time is non-prime.

1/ Non-U.S. online users incur charges under the online pricing algorithm and are charged \$3.00 extra on the connect charge (per hour) portion, and \$0.10 extra per offline printed page.

Attachment: License Agreement Change

Notice of CANCERLIT Lease Availability

Effective immediately the National Cancer Institute (NCI) will license CANCERLIT as well as PDQ to domestic licensees. New potential licensees should contact the following for information about the NCI license:

Dr. Dianne Tingley  
R.A. Bloch International Cancer Information Center  
9030 Old Georgetown Road  
Bethesda, MD 20852  
301-496-7403

Existing CANCERLIT licensees will be transitioned from the NLM license to the NCI license and tape shipments effective October 1, 1989. NLM will continue to license CANCERLIT to the non-U.S. International Centers, and to provide online MEDLARS access to CANCERLIT both to U.S. and non-U.S. users.

MEDLARS® PRICING SCHEDULE

|  |                        |                                      | Backfile:<br>(1965-80)<br>\$2,500/yr<br>minimum  | Backfile:<br>(1965-80)<br>\$2,500/yr<br>minimum  |
| TOXNET®<br>Databases   | 8/Online<br>Algorithm  | 9/\$5,000/yr<br>minimum              | See individual database names.   |  |

NOTES: In addition to the above rates, the following charges apply to each Domestic and Non-U.S. Online Center: \$1 per Offsearch per file and \$1 per Automatic SDI. Automatic SDI searches on the TOXLIT database are \$4.00 for domestic users (\$1.00 plus \$3.00 royalty). In general, non-U.S. online users incur charges under the online pricing algorithm and are charged \$3.00 extra on the connect charge portion and \$0.10 extra per offline page.

A Tape License Agreement packet is available upon written request to the Associate Director, Library Operations, National Library of Medicine, Bethesda, MD 20894. For a fee of \$25.00, a sample tape is also available upon written request in advance of signing a license agreement. In addition, NLM offers a Subset Tape Program; see Note 17.

Replacement Tape Policy: All replacement tapes should be requested within 30 days of the original shipment date.

1. If a licensee notifies NLM that a tape is unreadable, the tape should be returned to NLM for testing.
2. If the returned tape is read and found to have errors or is found to be unreadable, NLM will produce and send a replacement tape at no charge.
3. If the tape is read and found to have no errors, NLM will produce and send a replacement tape. There will be a \$75.00 charge per tape.
4. If a licensee notifies NLM that the tape is unreadable but the tape is not returned to NLM for testing, there will be a \$75.00 charge for each replacement tape NLM produces and sends to the licensee.

- 
- 1/ ELHILL online charges for domestic users are calculated by using an algorithm which includes connect hour charges and charges for search statements, citations, interactions (i.e., carriage returns), computer resources (i.e., disk accesses), and characters transmitted to the user's terminal. Unless otherwise noted, the connect hour charge portion of the algorithm is \$7.85/hour prime time and \$5.10/hour non-prime time, and the offline print charge is \$0.25 per page. Details of the entire algorithm follow these notes.
  - 2/ ELHILL online charges for non-U.S. users are calculated by using an algorithm which includes connect hour charges and charges for search statements, citations, interactions (i.e., carriage returns), computer resources (i.e., disk accesses), and characters transmitted to the user's terminal. Each database, except the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY file, MEDLEARN and the INFORM databases, has a minimum against which usage is charged. Unless otherwise noted, the connect hour charge portion of the algorithm is \$10.85/hour prime time and \$8.10/hour non-prime time, and the offline print charge is \$0.35 per page. Usage over the minimum will be calculated at the rate of the file being accessed. The dollar equivalent of usage over the minimum on one file will be applied to the minimum for the other file(s). Usage on technical databases, the MESH VOCABULARY File, MEDLEARN, and INFORM may not be applied to minimums on other databases. Details of the entire algorithm follow these notes.
  - 3/ ELHILL tape charges for domestic users consist of an annual minimum charge for each database except the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), the MESH VOCABULARY File, and MEDLEARN. Unless otherwise noted, usage charges of \$4.00/connect hour and \$0.01/offline citation are applied to the annual minimum. (The use charge is \$3.00/connect hour between 6:00 p.m. and 6:00 a.m. local time Monday through Friday, and all day Saturday and Sunday. This time period is referred to as tape non-prime time.)

Usage over the minimum will be charged the rate of the file being accessed. For institutions or organizations leasing two or more files with a minimum plus usage, the dollar equivalent of usage over the minimum for one file may be applied to the minimum for the other files(s).

An annual flat fee, with no usage charges, will be charged for each of the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), and the MESH VOCABULARY File. Usage on other leased databases may not be applied to these annual flat rate fees.

Domestic centers providing service to non-U.S. users will be charged at the non-U.S. rate for this portion of their service.

Extra charges are levied for Class Maintained files or special formats. Prices for files and formats currently available are:

|                                      |              |
|--------------------------------------|--------------|
| SDILINE GENER FORMAT                 | \$1,000/year |
| CLASS MAINTAINED MEDLINE DATA:       |              |
| Complete Database Replacement Copies | \$3,000/year |
| Changed Records Only                 | \$1,000/year |

Charges for physical tapes and shipping are included in the minimum charges for each database.

4/ Tape charges for non-U.S. users and the portion of non-U.S. use provided by domestic centers consist of an annual minimum charge for each database except the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), and the MESH VOCABULARY File. Unless otherwise noted, usage charges of \$7.00/connect hour and \$0.03/offline citation are applied to the annual minimum. (The use charge is \$6.00/connect hour between 6:00 p.m. and 6:00 a.m. local time Monday through Friday, and all day Saturday and Sunday. This time is referred to as tape non-prime time.) Usage over the minimum will be charged the rate of the file being accessed. For institutions or organizations leasing two or more files with a minimum plus usage, the dollar equivalent of usage over the minimum for one file may be applied to the minimum for the other file(s).

An annual flat fee, with no usage charges, will be charged for each of the technical databases (AVLINE, CATLINE, NAME AUTHORITY, and SERLINE), and the MESH VOCABULARY File. Usage on other leased databases may not be applied to these annual flat-rate fees.

Extra charges are levied for Class-Maintained files or special formats. Prices for files and formats currently available are:

|                                      |              |
|--------------------------------------|--------------|
| SDILINE GENER FORMAT                 | \$1,000/year |
| CLASS MAINTAINED MEDLINE DATA:       |              |
| Complete Database Replacement Copies | \$3,000/year |
| Changed Records Only                 | \$1,000/year |

Charges for physical tapes and shipping are included in the minimum charges for each database.

5/ Available in ELHILL or MARC version except for weekly updates of the current-year CATLINE file which are available only in MARC.

- 6/ CHEMLINE royalty charges of \$0.29 per online citation, \$0.08 per search statement, and \$54.00 per hour of connect time are added to the algorithm. Offline page charges of \$1.65 per page include \$1.40 per page royalty. Effective March 1, 1989, CHEMLINE royalty charges of \$0.39 per online citation, \$0.262 per search statement, and \$39.00 per hour of connect time are added to the algorithm. Offline page charges of \$1.77 per page include \$1.52 per page royalty. Royalty charges are subject to change without advance notice.
- 7/ CHEMLINE, TOXLIT, and TOXLIT65 tape royalties are not paid to NLM but are negotiated with and paid directly to the file content provider, Chemical Abstracts Service (CAS). TOXLINE, and TOXLINE65 tape royalties are not paid to NLM but are negotiated with and paid directly to the file content providers, BioSciences Information Service (BIOSIS) and the American Society of Hospital Pharmacists (ASHP). TOXLINE and TOXLINE65 are available March 1, 1989 for leasing in their 1989 NLM configuration which includes the royalty-based subfiles BIOSIS and IPA and requires separate arrangements with those data suppliers in advance.
- A second leasing option is available for NLM tape TOXLINE and TOXLINE65 which includes all subfiles except BIOSIS and IPA. The charges are the same as for the full files because the same number of update tapes are sent. Please specify which TOXLINE version is to be licensed.
- 8/ TOXNET (HSDB, CCRIS, & RTECS) online charges are calculated for domestic users by using an algorithm which includes connect hour charges and charges for search statements, interactions (i.e., carriage returns), and characters created for transmission to the user's terminal. Unless otherwise noted, the connect hour portion of the algorithm is \$10.00/hour prime time and \$8.00/hour non-prime time, and the offline print charge is \$0.25 per page.
- 9/ TOXNET (HSDB, CCRIS, & RTECS) online charges are calculated for non-U.S. users by using an algorithm which includes connect hour charges and charges for search statements, interactions (i.e., carriage returns), and characters created for transmission to the user's terminal. For Fiscal Year 1988, one minimum of \$5,000 will be charged for all TOXNET databases. Unless otherwise noted, the connect hour portion of the algorithm is \$13.00/hour prime time and \$11.00/hour non-prime time, and the offline print charge is \$0.35 per page. Usage over the minimum charges will be calculated at the rate of the file being accessed. The dollar equivalent of usage over the minimum on TOXNET may be applied to the minimum for other MEDLARS databases on ELHILL.
- 10/ Available in ELHILL, Card Image, or MARC format. ELHILL format is updated either monthly or annually; Card Image and MARC formats are updated annually.
- 11/ Usage is charged separately, i.e., usage on this file may not be applied to the aggregate minimum charges.
- 12/ Effective January 1988, NLM negotiates with and collects royalties for the Chemical Abstracts Service for CHEMLINE, TOXLIT, and TOXLIT65 from the non-U.S. Online Center. Separate agreements between the non-U.S. Online Center and BIOSIS or ASHP are no longer necessary.
- 13/ Certain SERLINE data elements related to holdings information are considered proprietary data and are not distributed via tape copies.

- 14/ TOXNET tape charges for domestic users consist of an annual minimum charge for each database. Included are usage charges of \$4.00/connect hour for prime time and \$3.00/connect hour for non-prime time (between 6:00 P.M. and 6:00 A.M. ET, Monday-Friday and all day Saturday and Sunday). Usage over the minimum will be charged at the rate of the file being accessed. A charge of \$1.00 per 1000 characters printed offline is included in the annual minimum charge.
- 15/ TOXNET tape charges for non-U.S. users consist of an annual minimum charge for each database. Unless otherwise noted, usage charges of \$7.00/connect hour for prime time and \$6.00/connect hour for non-prime time will be established. Usage over the minimum will be charged at the rate of the file being accessed. A charge of \$1.25 per 1000 characters printed offline is included in the annual minimum charge.
- 16/ TOXLIT royalty charges of \$0.24 per online citation, \$0.15 per search statement, and \$69.11 per hour of connect time are added to the basic online algorithm. Offline page charges of \$0.98 per page include \$0.73 per page royalty. Effective March 1, 1989, TOXLIT royalty charges of \$0.40 per online citation, \$0.52 per search statement and \$39.00 per hour of connect time are added to the basic online algorithm. Offline page charges of \$1.20 per page include \$0.95 per page royalty. Royalty charges are subject to change without advance notice.
- 17/ MEDLINE data are also available under the NLM Subset Program for domestic users. A subset information packet is available upon request from MEDLARS Management Section, National Library of Medicine, Bethesda, MD 20894. Prices are prorated on the amount of data received and a flat-rate option is also available to qualified users. The detailed "Charges for Subsets" is included at the end of this pricing schedule.

SUMMARY FEE SCHEDULE FOR LEASING NLM DATA IN MACHINE-READABLE FORM:  
MEDLINE, ITS BACKFILES, AND SDILINE\*

In general there are two types of charges associated with licensing machine-readable data from NLM. These are:

1. License fee to obtain the data. This is either a minimum amount, which is offset by a use charge, or a flat rate; and
2. A charge for the use and/or redistribution of the data. Some NLM databases do not require a use charge.

Domestic licensees who do not obtain data directly from NLM but actually receive the NLM data reformatted from a third party that itself is licensed to receive NLM data, are charged a reduced license fee.

Licensees in foreign countries, or domestic licensees who provide data outside the United States and its Territories pay a surcharge for foreign usage. This surcharge was established to recover the portion of the costs of creating the database attributable to non-U.S. use.

License Fee: For licensees providing online services and/or redistributing data. Fee includes monthly MEDLINE/SDILINE updates, and annual or monthly copies of the MeSH Vocabulary File.

For Licensees receiving the data from NLM:

|   | <u>Domestic</u> | <u>Non-U.S.</u> |
|---|-----------------|-----------------|
| 1. Annual minimum for Complete Current Year |                 |                 |
| Monthly Updates                             | \$5,000         | \$5,000         |
| Semi-Monthly Updates                        | \$8,000         | \$8,000         |
| 2. Annual minimum for Complete Older Data   | \$10,000        | \$10,000        |

For Licensees receiving reformatted data from a third party:

|   | <u>Domestic</u> | <u>Non-U.S.</u> |
|---|-----------------|-----------------|
| 1. Annual minimum for Complete Current Year | \$5,000         | N/A             |
| 2. Annual minimum for Complete Older Data   | \$5,000         | N/A             |

Use Charge: For licensees providing online services.

|                | <u>Domestic</u>                    | <u>Non-U.S.</u>                   |
|----------------|------------------------------------|-----------------------------------|
| 1. Prime time  | \$4.00/hr.<br>+\$0.01/offline cit. | \$7.00/hr.<br>\$0.03/offline cit. |
| 2. Non-prime** | \$3.00/hr.<br>+\$0.01/offline cit. | \$6.00/hr.<br>\$0.03/offline cit. |

Redistribution Charge: For licensees redistributing the data.

|  | <u>Domestic</u>       | <u>Non-U.S.</u>       |
|--|-----------------------|-----------------------|
| Redistribution on<br>laser optical discs | \$100/subscription*** | \$125/subscription*** |

\* Charges for SDILINE are the same as those for the current year of MEDLINE.

\*\*Non-prime time is defined as between 6:00 P.M. and 6:00 A.M. local time, Monday through Friday and all day Saturday, Sunday, and holidays.

\*\*\*Multiple subscriptions are \$100 and \$125 each.

**Charges For Subsets**

Subsets are available on magnetic tape from the MEDLINE database and its Backfiles. All charges include a copy of the MESH Vocabulary File if requested.

**"Personal Use" Subsets:** There is an annual limit of 150,000 citations.

I. Individualized Subsets: annual subscription to the current year and Backfiles. Charges include monthly updates and annual replacement tape(s) for which maintenance and error correction have been performed.

|   | <u>Domestic</u> | <u>Non-U.S.</u> |
|---|-----------------|-----------------|
| A. Licensee receiving data from NLM           | \$1,500         | N/A             |
| B. Licensee receiving data from a third party | N/A             | N/A             |

II. Custom Subsets: one-time retrieval from current year and Backfiles -- \$500 flat rate; no updates provided.

|   | <u>Domestic</u> | <u>Non-U.S.</u> |
|---|-----------------|-----------------|
| A. Licensee receiving data from NLM           | \$500           | N/A             |
| B. Licensee receiving data from a third party | \$250           | N/A             |

**"Individualized Multiple Use" Subsets:** Charges include monthly updates and annual replacement tape(s) for which maintenance and error correction have been performed.

I. Option A: Annual minimum with use charge. (The use charge offsets the annual minimum charge. If the use is a dollar equivalent less than the minimum, the minimum is paid. If the actual use is a dollar equivalent more than the minimum, the dollar equivalent is paid.)

A. Current Year Annual Subscription

1. Annual Minimum Charge is dependent upon the percentage of the current year's MEDLINE data received:

|                   | <u>Monthly Updates</u> | <u>Semi-Monthly Updates</u>   |
|-------------------|------------------------|---|
| up to 25% file:   | \$1,250                | N.A.  |
| 26% to 50% file:  | 2,500                  | N.A.  |
| 51% to 75% file:  | 3,750                  | N.A.  |
| 76% to 100% file: | 5,000                  | \$8,000 - all records,<br>(100% of the file)<br>only all data elements. |

2. Use charges offset annual minimum: \$4 per connect hour during prime time and \$3 per hour during non-prime time (6:00 pm to 6:00 am local time Monday through Friday, and Saturday, Sunday, and holidays) PLUS \$0.01 for each citation printed offline at the host computer.

B. Backfiles Annual Subscription

1. Annual Minimum Charge is dependent upon the percentage of data from 1966 up to the current year received:

|                   |         |
|-------------------|---------|
| up to 25% file:   | \$2,500 |
| 26% to 50% file:  | 5,000   |
| 51% to 75% file:  | 7,500   |
| 76% to 100% file: | 10,000  |

2. Use charges offset annual minimum: as described for Current Year Annual Subscription

II. Option B: Flat Rate, Domestic (U.S.) Only

Under certain circumstances, a flat rate pricing option is available for a domestic institution/organization which does not vend a database service. In order to qualify for the flat rate, the institution/organization must limit access to either academically affiliated institutions or corporate members of the organization which are located within a "reasonable geographic distance" (usually interpreted to be within the confines of the local region's telephone area code). Alternatively, if the institution/organization does not anticipate having sufficient use to warrant paying the flat rate, it may offset the minimum annual charge by \$4 per connect hour with no charges for citations printed offline (as a second option to the annual minimum use charges described in Section I.A.2 above).

A. Current Year Annual Subscription from NLM

Charges are not dependent upon the size of the file. There is a \$10,000 annual flat rate which includes one academically affiliated institution for a subscription updated monthly; \$13,000 annual flat rate which includes one academically affiliated institution for a subscription updated semi-monthly. The semi-monthly update option is defined to include all records (100% of the file) and all data elements. An additional annual charge of \$1,000 is made for each additional academically affiliated institution to which service is provided.

B. Backfiles Annual Subscription from NLM

Annual flat rate is dependent upon the size of the subset licensed. For MEDLINE data from 1966 up to the current year:

|                   |         |
|-------------------|---------|
| up to 25% file:   | \$2,500 |
| 26% to 50% file:  | 5,000   |
| 51% to 75% file:  | 7,500   |
| 76% to 100% file: | 10,000  |

C. Current Year Annual Subscription to Reformatted Data from a Third Party: \$5,000

D. Backfiles Annual Subscription to Reformatted Data from a Third Party:

|                   |         |
|-------------------|---------|
| up to 25% file:   | \$1,250 |
| 26% to 50% file:  | \$2,500 |
| 51% to 75% file:  | \$3,750 |
| 76% to 100% file: | \$5,000 |

## Using GRATEFUL MED's Editing Capability for Searches

Carolyn B. Tilley  
Head, MEDLARS Management Section

The new Version 4.0 GRATEFUL MED<sup>®</sup> program includes an EDIT feature which allows you to modify a previous search without complete re-keying on an Input Form screen. This feature can be used immediately after running a search. The option is not available if you choose to review the results of a search at a later time. Although the GRATEFUL MED *User's Guide* offers a more thorough review of this subject (pages 2-38 and 2-39), here is a brief walk-through of this feature.

We'll assume, for this example, that the searcher is interested in articles on use of shock waves to dissolve stones in the gallbladder. We will also assume that the searcher does not know the proper MeSH<sup>®</sup> headings to use to describe these concepts. The steps described here (the examples begin on page 8) represent a useful approach for subjects where the appropriate MeSH headings are more difficult to envision and a first search leads to the identification of headings to use in a subsequent search to increase retrieval.

Continued on page 8.

## Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual, 1988 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections as well.

### REVISED BASICS AVAILABLE

The revised edition of the *Basics of Searching MEDLINE* will be available for purchase from the National Technical Information Service (NTIS) in early April. This *Guide* is designed to acquaint the health professional and other novice searchers with the basic concepts and skills involved in using MEDLARS® to retrieve information directly from its primary database, MEDLINE®. It may be used in a formal training course or as a self-paced learning tool. The publication number is PB89-146179/GBB. The price is \$20.50. There is a \$3.00 (U.S. and Canada) shipping and handling charge required for each order. Please send remittance with orders to:

National Technical Information Service  
5285 Port Royal Road  
Springfield, VA 22161  
(703) 487-4650 (for telephone orders with deposit account or credit card)

### 1989 INDEX MEDICUS® SUBSCRIPTION PRICE CHANGE ANNOUNCED; PRODUCTION DELAYS

As announced in the October 1988 *NLM Technical Bulletin*, the 1989 monthly *Index Medicus* will begin to be issued in two parts because of the increasing number of pages in the monthly issues. This change, plus dramatic increases in paper and manufacturing costs, has led GPO to reprice the 1989 *Index Medicus* subscription at \$297 (\$371.25 non-U.S.). The new price will apply to orders received after January 30, 1989; orders received earlier will be honored at the previously announced rate of \$230 (\$287.50 non-U.S.).

There have been unusual delays in producing this year's January issue of *Index Medicus*, parts 1 and 2, and these books are scheduled to be shipped to customers in early March. The February issue will appear in early April, with March following shortly thereafter.

### PDQ® CHANGES

Myeloproliferative Disorders state-of-the-art statement:

The state-of-the-art statement on polycythemia vera has been incorporated into a new statement titled "Myeloproliferative Disorders." In addition to polycythemia vera, the new statement contains information about agnogenic myeloid metaplasia and essential thrombocythemia. The fourth myeloproliferative disorder, chronic myelogenous leukemia, continues to be discussed in a separate statement.

Cancer Prevention and Detection:

A new menu option is available which allows one to select protocols that deal with aspects of cancer prevention and detection. This option is described in the PDQ news.

### NLM TECHNICAL BULLETIN INDEX

Enclosed with this issue is a copy of the latest index to the *NLM Technical Bulletin*, covering the January 1988 through December 1988 issues.

### TRI FACT SHEET

Enclosed with this issue please find the TRI Fact Sheet.

Please access **FILE INFORM** and type **NEWS** to see the most recent news items online!

## TOXLINE<sup>®</sup> Regenerated

Ready? The reconfiguration of the TOXLINE family of databases first announced last Fall has been completed, with the new files released to the public on March 5, 1989. The regenerated TOXLINE file now has Class Maintained 1989 MeSH on the Toxicity Bibliography (TOXBIB) portion of TOXLINE and its new backfile, TOXLINE65. The latter covers publication years 1980 and earlier.

### FILE CONFIGURATION

The biggest change in the newly-reconfigured TOXLINE file is that NLM has returned to the practice of including bibliographic information in toxicology from BioSciences Information Service (i.e., the Toxicological Aspects of Environmental Health subfile, with the subfile acronym BIOSIS) and from the American Society of Hospital Pharmacists (i.e., the International Pharmaceutical Abstracts subfile, with the subfile acronym IPA) in the TOXLINE and TOXLINE65 databases. Accordingly, NLM has negotiated licenses with the suppliers of these files allowing payment of flat fees by NLM for all online use of their data in the TOXLINE files without any additional royalty charges based on usage. This means that the charge to users for accessing the new TOXLINE and TOXLINE65 files will be the same as that for searching MEDLINE and most other MEDLARS files. The list of TOXLINE subfiles as of the March 1989 regeneration is shown in Table I.

The new TOXLINE files will thus include all the subfiles in the collection of toxicology bibliographic information except the subfile from Chemical Abstracts Service (CAS). This subfile, known as Chemical-Biological Activities (subfile acronym CA), will constitute the content of the TOXLIT and TOXLIT65 files. The 1989 prices for using the TOXLIT files, which will continue to have royalty fees included in their use charges, were announced in the January 1989 *NLM Technical Bulletin*.

Other details about the regenerated TOXLINE files are:

#### **BIOSIS SUBFILE: BIOSYSTEMATIC CODES, CONCEPT CODES, AND MeSH HEADINGS**

The BIOSIS subfile records added to TOXLINE since August of 1985 now contain the textual equivalents of the Biosystematic Codes and Concept Codes from BIOSIS in the TOXLINE keyword field. These keywords are searchable directly (the first thirty-nine characters) with the Keyword (KW) qualifier; they are, of course, also searchable as Text Words (TW) following

ELHILL's textracting rules. In addition - and this is really BIG NEWS - for these approximately 120,000 BIOSIS records with keywords, we have used a mapping program that links these keywords to MeSH Headings! This is the first step in a long-term effort to provide MeSH vocabulary for all TOXLINE subfiles. The presence of these MeSH terms on the BIOSIS records should make searching for broad concepts more efficient. While this mapping approach does not yield the same level of detail as actual indexing with MeSH terms, it does provide a consistent searching vocabulary across more of TOXLINE. Look for a March *NLM Technical Bulletin* article on this project.

#### **TSCATS SUBFILE: SEARCHABLE EPA SUBMISSION NUMBERS**

The TSCATS subfile will be reloaded in order to make the EPA submission types searchable. These submission types will appear in the Classification Code (CC) data field. In addition, this reload includes many additional abstracts. TOXLINE users should use the Order Number (OD) field to get the number needed to order copies of these EPA submissions from the National Technical Information Service (NTIS).

#### **TOXBIB SUBFILE: SI DATA INCLUDED**

Contrary to what was reported in the September 1988 *NLM Technical Bulletin*, the MEDLINE-assigned molecular sequence data bank numbers will be reported in TOXLINE's ID Number (ID) data field. The Secondary Source ID (SI), which serves as the unique identifier for records in TOXLINE, will continue to have only a single occurrence per record.

#### **CRISP SUBFILE: COVERAGE**

The Toxicology Research Projects subfile (subfile acronym CRISP) was replaced during the regeneration with a new version of this subfile that contains Public Health Service toxicology research projects for fiscal years 1986, 1987, and 1988. Even though some of the 1988 projects do not yet have abstracts, they have been included in the interest of more timely access to these important references to current research efforts. During next year's TOXLINE regeneration, the 1988 reports will be replaced with a new file containing all the abstracts for this period.

#### **EPIDEM SUBFILE: UPDATED**

The Epidemiology Information System subfile (EPIDEM) was also reloaded with this regeneration. This allowed the Food and Drug Administration,

supplier of this subfile, to provide updated versions of their records as well as additional records.

**EMIC AND ETIC SUBFILES**

The Environmental Mutagen and Teratology Information Center Files (EMIC and ETIC subfiles) are still included in TOXLINE and TOXLINE65. As explained in another article in this issue, substantial changes have occurred in the way these files are created and managed. Neither subfile has been updated recently in TOXLINE, but we are anticipating an update sometime this year once all the EMIC and ETIC files are up on TOXNET.

**HMTC SUBFILE: ACCESS TO MORE RNs**

Finally, the Hazardous Materials Technical Center File

(HMTC subfile) has been reloaded following a modification to our program for bringing these records into TOXLINE. Users will notice additional CAS Registry Numbers in this subfile.

**SUMMARY AND MULTIFILE EXAMPLE**

In summary, we hope that the new configuration of the TOXLINE files, with substantially more records available at the usual MEDLARS searching rates, will increase the utilization of this information. Users are reminded that the toxicology bibliographic files are particularly well-suited to searching with the new ELHILL Multifile Search (MFS) command. This allows efficient processing of search strategies across databases, with the flexibility of intervening when specific files or output are needed. An example of such a MFS search is shown in Figure 1.

```

Abstract:

1206 patients with gallstone disease were treated between January 1985 and December 1987, using an interdisciplinary concept that included surgery, endoscopic sphincterotomy, and extracorporeal shock-wave lithotripsy (ESWL). Twenty-five per cent of the patients who were admitted for gallbladder stones were treated by ESWL, whereas 75% underwent surgery. Mortality of elective treatment for gallbladder stones amounted to 0.25% (0.4% in surgery, 0% in ESWL). Postoperative complication rate was low (4.2% in surgery, 7.0% in ESWL). After ESWL treatment, 80% of the patients were free of stones after a follow-up period of 1 year. Recurrence rate in these patients amounted up to 10%; in seven of 70 patients, mean follow-up period was 6 months after complete disappearance of stones. Twenty-seven per cent of all patients who were admitted for bile duct stones underwent surgery, whereas in the other 73%, calculi were removed via endoscopy. ESWL treatment was used additionally, if necessary. Fragments were left behind in three of 75 patients (4.0%) after surgical treatment, and in 7 of 200 patients (3.5%) after endoscopic and ESWL treatment, respectively. In the latter group, three patients (1.5%) required an additional operation. There were no deaths in either of the groups. The use of ESWL for treatment of gallbladder stones needs to be evaluated in long-term follow-up studies. Thus far, surgery remains the dominating method. Endoscopic procedures, eventually combined with ESWL, represent the preferred treatment for patients with bile duct stones.

Medical Subject Headings:

Aged  
Cholelithiasis--SURGERY--THERAPY  
Follow-Up Studies  
Human  
Lithotripsy  
Male  
Postoperative Complications  
Recurrence

:  
:

STEP 2. - After reviewing several references, two MeSH headings are suggested by the program. GRATEFUL MED will only suggest MeSH headings for searches where at least 3 references were found and if a pattern of headings in the citations indicated as relevant:

If you searched on a subject and did not find all you want your relevancy judgments indicate that you might try again using these headings:

CHOLELITHIASIS  
LITHOTRIPSY

CHOLELITHIASIS is the MeSH heading for the presence of gallstones.

LITHOTRIPSY is the MeSH heading used to represent the use of sound waves to dissolve stones or "calculi."

TERMS ARE SHOWN ABOVE IN THE FORMAT THEY SHOULD BE ENTERED ON A SUBJECT LINE.

PRESS ENTER TO GO ON.

STEP 3. - Answer 'N' to the question on searching for older material. (Or, press ENTER as the default answer is indicated by the capitalized 'N'.)

DO YOU WANT TO RUN THE SAME SEARCH AGAINST OLDER MATERIAL (y/N)?

STEP 4. - Answer 'Y' to the question on whether you wish to continue. (Or, just press ENTER, as the default is 'Y'.)

DO YOU WANT TO CONTINUE SEARCHING (Y/n)?  
ANSWERING NO WILL RETURN YOU TO DOS.

STEP 5. - Answer 'N' or just press ENTER in response to the question on changing databases.

DO YOU WANT TO CHANGE DATABASES (y/N)?

IF YOU DON'T CHANGE, YOU WILL BE SEARCHING MEDLINE.

STEP 6. - Answer 'Y' or press ENTER in response to the EDIT question.

DO YOU WANT TO EDIT YOUR LAST SEARCH (Y/n)?

STEP 7. - You will then see the Input Form Screen with the entries for the previous search. Also, the postings for each line of the search will be shown in the Found column on the right side of the screen.

INPUT YOUR SEARCH MEDLINE  
 FILL IN THE APPLICABLE LINES, E.G., TYPE AUTHOR'S NAME IN THE AUTHOR LINE.

                                                DO YOU WANT TO RETRIEVE THE ABSTRACTS (y/N)?

```

Postings "gone."

B. Make a selection regarding the ABSTRACTS? question and run the search. In this example, the search retrieval was increased to 47 references. Other parameters, such as starring (\*) the MeSH headings or using subheadings, can be employed to restrict the search and increase precision.

GRATEFUL MED

YOUR SEARCH FOUND 47 REFERENCES.  
YOU SAVED 14 OF THESE TO REVIEW NOW.  
THE COST OF THIS SEARCH WAS \$3.41

DO YOU HAVE A PRINTER AND WANT TO PRINT RELEVANT CITATIONS (y/N/f)?

[Editor's Note: Each month the NLM Technical Bulletin features a column concerning GRATEFUL MED, often consisting of questions/answers. Contributions for this column will be appreciated.]

*I installed Version 4.0 and have not been able to connect to the NLM computer. Version 3.0 worked fine. What should I do? TYMNET is the only service in my area.*

Users who installed Version 4.0 on top of Version 3.0 may have a problem using TYMNET access. This is because part of the program that deals with login procedures is retained from Version 3.0 and is not fully compatible with the rest of Version 4.0. Fortunately, it's easy to make things agree.

Go into the program and select CHANGE from the ACTION screen. Then select Telephone numbers, followed by Change or view an existing directory. When GRATEFUL MED asks what service you want to change, enter the service number for TYMNET from your Dialing Directory (probably number 1 if TYMNET is your only service). You will then go to the CHANGE A SERVICE screen. You won't need to actually change anything on this screen; simply hit <Enter> to take the cursor down to the bottom of the screen and then hit the END key. In fact, hit END until you are all the way back to the initial screen and continue the program as usual. Stepping through SETUP for TYMNET like this will change your program so that connecting to the NLM computer will work properly.

*I have a monitor that is designed to go blank if the keyboard is not touched every few minutes. This is a problem when I'm downloading citations because I like to watch them as they appear on the screen. However, if I touch the keyboard to bring back the video when it disappears, the downloading stops.*

This is because GRATEFUL MED interprets any keystroke as a signal to abort the search. Fortunately, there is a "safe" key you can touch to bring back your

video without aborting your search -- this is the SHIFT key.

*I want to update my searches. How can I run a search that will only give me citations that I haven't seen?*

The best way to do this is to plan to update your searches once a month. That way you can run your searches in SDILINE® (the database that carries the current month's citations) and only retrieve citations that have been most recently added to MEDLINE. The steps to set up a search that will be used for updating are as follows:

Select SDILINE from the list of Other Databases. (SDILINE stands for Selective Dissemination of Information onLINE.)

Enter your strategy on the SDILINE Input form screen. For an example see Figure 1. The search strategy is now saved as an SDILINE search. Note that a search that will be used for MEDLINE updates is not saved in MEDLINE. This is important because you will want to execute this strategy in SDILINE (the small subset of MEDLINE containing only one month's citations) and the screen on which it is saved determines where the search can be used later.

Once a month you will want to use this SAVED search to do your update.

To do an update:

Select USE from the ACTION screen. You will see a display of the names of the searches you have saved along with the date each was saved.

| <u>FILE</u>  | <u>SAVED ON</u>          |
|--------------|--------------------------|
| LASTSRCH.MED | Wed Feb 08 10:58:25 1989 |
| MELANOMA.MED | Fri Feb 03 11:24:34 1989 |
| PARKINSN.MED | Mon Feb 06 16:34:18 1989 |
| BYPASS.MED   | Tue Feb 07 10:58:25 1989 |

Note: The first name is always LASTSRCH because the last search executed is automatically SAVED. All SAVED search names are given the extension "MED" and you can't tell from the name what database input screen was used to save the strategy.

Move the cursor to highlight the name of the search, you want to run, in this example, "BYPASS," and hit <Enter>.

The Input screen for this SDILINE search will appear. Hit <Enter> to move to the bottom of the screen and then ..GO ON TO SEARCH. In this example, the BYPASS strategy will run in SDILINE retrieving citations added to MEDLINE in the past month. When should you update?

The following schedule shows when SDILINE will be reloaded with new citations for the remainder of 1989. You will want to USE your SAVED SDILINE searches to do updates after the date shown.

Mar 25 Apr 22 May 27 Jun 29

Jul 29 Aug 26 Sep 23 Oct 28

Editor's note:

A number of problems with version 4.0 have arisen which, fortunately, can be corrected by using special "fix" programs. These fixes are available on the Bulletin Board System (Choice BBS on the ACTION Screen) and can be downloaded and applied to your GRATEFUL MED program. Each fix consists of two files, \_\_\_fix.BAT and \_\_\_fix.ARC. At the time we go to press there are four fixes available. NOTE: not every user will need to make every fix.

1. GMFIX.BAT & GMFIX.ARC

- error EXPLODING (+) a MeSH term that contains the character string, "ALL."
- year and date missing from USELOG file.
- minor MeSH problems

2.\* MONOFIX.BAT & MONOFIX.ARC

- dim display of online interaction on monochrome composite monitors

3.\* AFFIX.BAT & AFFIX.ARC

- incompatibility with AT&T modems used at NIH

4.\* EVERFIX.BAT & EVERFIX.ARC

- adds a necessary pause for Evercom and other modems

\*These fixes are appropriate for a small number of users only.

Instructions for applying these fixes are found in Bulletin #33, "Downloading and Applying Fixes to GRATEFUL MED." Users who installed with a 3.5 inch disk should pay special attention to the note at the end of Bulletin #33. Instructions for downloading files are found in Bulletin #15, "Downloading Files Using GRATEFUL MED." Be sure to read both bulletins (15 and 33) before attempting to download or use fixes.

*I've tried downloading from the GRATEFUL MED Bulletin Board. However, according to bulletin #15 I need to use the F8 key, and when I do my computer freezes up. What do I do now?*

A small number of users will have this problem with the F8 key when downloading from the BBS. You can correct this particular problem using instructions posted in bulletin #37, "Help for modems that don't send break."

Users should also be aware that they can use any telecommunications software to access the BBS using TELENET address c 301 535. This way a user can download files from the BBS using a more familiar method.

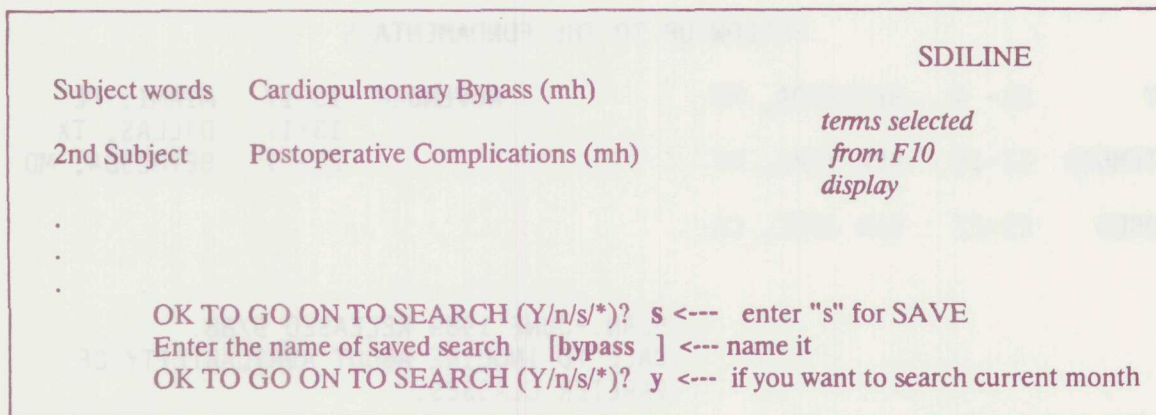

Figure 1

# NLM Online Training Classes Announced for July - December 1989

Patricia C. Buchan  
MEDLARS Management Section, NLM

The schedule for the second half of 1989 has been announced and is printed below. Please refer to the September 1988 *NLM Technical Bulletin* for the "Request for Training" application form. The January through June portion of the 1989 schedule was

announced in that issue. Few classes during that time period remain available. Please call the MEDLARS Service Desk for the most up-to-date class status information.

All classes are considered "tentative" pending sufficient enrollment (a minimum of 12 attendees) by approximately one month before the class.

## HEALTH Unique Identifiers in DOCLINE

Beginning March 1, 1989 most HEALTH file Unique Identifiers (UIs) may be used in DOCLINE® for automatic routing of journal requests.

The HEALTH file currently consists of citations taken primarily from MEDLINE (80%) and citations to articles from Special List Health journals (18%) indexed and added by the American Hospital Association (AHA). Requests for these articles will route based on the UI of the serial title from SERLINE® and serial holdings information in SERHOLD.

There are also some citations to non-journal material (2%) from 1975-1981, added by the National Health Planning Information Center (NHPIC). These documents are mainly technical reports, monographs, monograph chapters and theses. Since there are no holdings for this type of material, requests cannot route automatically.

The user may print the UI field separately or use the standard print command in HEALTH which will display the Secondary Source ID (SI) field.

SI - MED/89023308  
 AU - Lowe-Phelps K  
 TI - Dismantling the Medicare home health benefit.  
 SO - Am J Nurs. 1988 Oct;88(10):1364-7.

SI - AHA/77248998  
 AU - Gent DI  
 TI - Energy crunch hits hospitals.  
 SO - Hosp Financ Manage. 1977 Jan;31(1):22-6.

The new prompt MEDLINE/HEALTH UI > will appear in the BORROW function of DOCLINE for requests for journal photocopies.

Users may enter the 8-digit number that follows the slash (/) in the SI field. This is the UI for citations with MED or AHA in this field. Do not include "AHA", "MED" or a slash after the DOCLINE prompt.

### Example for SI - AHA/77248998:

LIBID [34567Z] > (CR)  
 TYPE (J,M,A) [J] > (CR)  
 MEDLINE/HEALTH UI > 77248998  
 TI: Energy crunch hits hospitals.  
 AU: Gent DI;  
 SO: Hosp Financ Manage 1977 Jan;31(1):22-6

IS THIS CORRECT? (Y,N) [Y] > (CR)  
 Citation accepted.

A Secondary Source ID (SI) with NP preceding the slash indicates that the record is derived from NHPIC. The number following the slash is a number for NHPIC records only and is not the UI, which may be printed out separately:

### PRT INCLUDE UI:

SI - NP/023182  
 AU - Mechanic D  
 TI - Future Issues in Health Care -- Social Policy and the Rationing of Medical Services.  
 UI - 05009445  
 SO - 1979;New York: Free Press, 1979 194 p.

In any case, these records are for monographic material. If the UI is entered into DOCLINE at the MEDLINE/HEALTH UI > prompt, the user will receive a message to enter the request as a monograph.

### Example for SI - NP/023182:

LIBID [34567Z] > (CR)  
 TYPE (J,M,A) [J] > (CR)  
 FORM (P,L) [P] >  
 MEDLINE/HEALTH UI > 05009445

This HEALTH file citation is not a journal.

If desired, request may be entered as a monograph(M).

TYPE (J,M,A) [J] > M

## ETICBACK - A New Bibliographic Database on TOXNET®

Stacey J. Arnesen

Specialized Information Services Division, NLM

John Wassom

Oak Ridge National Laboratory

On January 30, 1989, TOXNET® featured its first bibliographic database. ETICBACK, the backfile for the Environmental Teratology Information Center (ETIC) database, contains over 46,000 references to publications from 1950-1988 on chemical, biological, or physical agents that may cause birth defects. To a lesser extent, the database also includes references to publications on other aspects of developmental and reproductive toxicology. Some references earlier than 1950 are included, as well. Records include complete bibliographic citations, specialized indexing keywords, chemical names, and Chemical Abstract Service Registry Numbers (CAS RN). ETICBACK can be accessed in TOXNET by typing FILE ETICBACK at any user prompt. References to more recent (1989-) teratology information will be included in another file, the ETIC database which will be added to TOXNET this spring.

ETIC and ETICBACK are produced by the Environmental Mutagen, Carcinogen, and Teratogen Information Program (EMCTIP) of the Oak Ridge National Laboratory in Oak Ridge, Tennessee. Founded in 1975, the Environmental Teratology Information Center (a component of the EMCTIP), has devoted its efforts to creating a bibliographic database for researchers, health professionals, and others interested in the scientific discipline of teratology. The Center also maintains a collection of all papers cited in the database. The EMCTIP also produces the Environmental Mutagen Information Center (EMIC) database which will become available on TOXNET later this year.

In the past, funding for the ETIC database came primarily from the National Institute of Environmental Health Sciences. Recently, the Agency for Toxic Substances and Disease Registry (ATSDR) and the Environmental Protection Agency (EPA) also have contributed to this project.

Citations from the ETIC and ETICBACK databases will continue to be found in TOXLINE and TOXLINE65 (labeled as the ETIC subfile in the Secondary Source Identifier field). In order to conform to the TOXLINE unit record structure, the information in the TOXLINE

version of the ETIC databases has been condensed and some of the data fields have been excluded.

Records in the ETICBACK database contain 28 data fields which provide bibliographic citations to and related information on journal articles, technical reports, dissertations, meeting abstracts, and symposia proceedings. The data fields are divided among five categories of information (Figure 1): ADMINISTRATIVE INFORMATION (record number, record length, entry date, revision dates), BASIC BIBLIOGRAPHIC INFORMATION (unique identifier, authors, title, and source), OTHER BIBLIOGRAPHIC INFORMATION (language, publication type, journal title abbreviation, year of publication, etc.), SPECIAL KEYWORDS (taxonomic name, sex, assay method, maternal effects, etc.), and SUBSTANCE IDENTIFICATION (name of agents, CAS RNs, etc.).

ETIC indexing is very different from the type of indexing used in MEDLINE®. Whereas MeSH® is used to describe the predominant subjects of the article, ETIC indexing extracts predefined types of data, as can be seen in the Special Keywords category (Figure 1). The taxonomic name (TAX) field gives the genus and species of the organism(s) tested in the study. In addition to the taxonomic name, the common name of the organism(s) is also given in the test object field (OT). For example, a study on humans would be indexed as *Homo sapiens* in the TAX field and mammal, human in the OT field. The Assay Method (AY) field describes systems, processes, or other factors tested to determine the possible teratogenic effects of agents in the fetus or offspring. Examples of terms in this field include nervous system, digestive system, and drug distribution. The Maternal Effects field (MAT) describes effects on the mother that are of importance to the outcome and assessment of the fetal effects. Examples of terms in this field include fetal loss, maternal fertility, and maternal digestive system. Some of the other Special Keyword fields are the Route of Administration (RA), Cells Cultured (CUL) and Sex Treated (SEX).

The specific chemicals that have been tested for teratogenic activity are extremely important to researchers and health professionals concerned with the potential toxicity of chemicals. In order to meet the needs of these users, all chemicals mentioned in a publication are indexed in the ETICBACK database. In addition, every possible effort is made to list the CAS RN for the chemical.

The ETICBACK database can be searched in a variety of ways including by author, special keywords, CAS RNs, and journal titles. A sample record from the database is shown in Figure 2.

For more information about ETICBACK please contact:

Specialized Information Services

**The ETICBACK Unit Record**

The following is the Unit Record description for the ETICBACK (Environmental Teratology Information Center) back file. Names and mnemonics are listed for each category, header, and data field. A name preceded by a double asterisk is a category, while headers are marked by a single asterisk. Data fields, the basic information units, have no asterisks. All of the data fields indented below a category or header can be referenced for the purposes of searching or printing with the mnemonic for that particular category or header.

## DBIR: A New Database Containing Information About Biotechnology Resources

James J. Ferguson, Jr., M.D.

Specialized Information Services Division, NLM

As of January 23, 1989, entering the command FILE DBIR while in TOXNET<sup>®</sup> invokes a novel database concerned with biotechnology. DBIR, the Directory of Biotechnology Information Resources, became publicly available as a component of the TOXNET system on that date. This file provides to the biotechnology and molecular biology communities a convenient guide to useful resources which are available in these sciences. Included among these resources are relevant databases, networks, bulletin boards, analytical application software, collections and repositories of cellular and subcellular elements, collaborative research organizations, and selected publications. In addition, the Directory identifies established committees and organizations which are presently dealing with the nomenclature of biotechnology and molecular biology.

The scope of biotechnology is defined very broadly within the Directory. In addition to the content of its component and cognate basic sciences, it encompasses the various applications of biotechnology in medicine, biology, agriculture, pharmaceuticals, food technology, and environmental sciences.

The publications cited are mainly of a summary, handbook, or compendium type, and do not include the primary periodical literature in the field. Commercial providers of standard laboratory supplies and equipment that are used in biotechnology research are not listed.

The unit record of DBIR contains 28 fields which characterize the resource entity being described. These fields are grouped into four categories: ADMINISTRATIVE INFORMATION (describing the record itself), RESOURCE IDENTIFICATION (which provides fundamental characteristics of the resource entity referenced), KEYWORDS/DESCRIPTORS

(which provides a general description of the resource plus special key words and assigned MeSH terms), and DATA TYPE SPECIFIC INFORMATION (providing more detailed information, determined by the type of resource described). It should be noted that full MeSH searching capability (e.g., EXPLODE) is not yet available on TOXNET, but is planned for the future.

The Directory has been assembled and maintained under contract by the Bioinformatics Department of American Type Culture Collection (ATCC) in Rockville, MD. The TOXNET system is used for assembly and maintenance of the Directory in order to exploit TOXNET's facility for frequent and rapid updating. The Directory will also be exported to the ELHILL<sup>®</sup> system, where it will become accessible as a subset of the DIRLINE<sup>®</sup> file. This will make it available to a different and larger user community, and will permit the utilization of GRATEFUL MED as a search interface.

The Directory currently has 357 records, and is expected to grow by several hundred more records. The richness and size of the Directory, and thus its usefulness, will ultimately be determined by the amount and kinds of descriptive information which are submitted for inclusion by existing resource entities. Consequently, such input is encouraged and welcomed from as many sources as wish to contribute, and should be directed to ATCC.

For detailed information on DBIR contact:

The DBIR Unit Record Structure

The following is the Unit Record description for the Directory of Biotechnology Information Resources (DBIR). The DBIR record contains a category for Administrative Information and three subject categories, which are further subdivided into headers, data fields and data tabs. A name preceded by a double asterisk is a category while headers are marked by a single asterisk. Data fields and data tabs have no asterisk. For purposes of searching and printing, all of the data fields indented below a category or header can be referenced with the mnemonic for that category or header. Note that the data tabs in RELT, RCNA, DINF, OINF, and OPINF are not individually searchable and so do not have mnemonics; their function is to organize and identify the data.

# The NLM Technical Bulletin

ISSN 0146-3055

FEBRUARY 1989

Supplement No. 1

## MEDLARS UPDATE

## SPECIAL ISSUE

### Introduction

This *Special Issue* of the *NLM Technical Bulletin* presents information on important changes made to the Medical Subject Headings vocabulary for 1989 as well as significant changes made to the MEDLARS<sup>®</sup> software and databases.

In its second year, the *Special Issue* replaced the "NLM Online Services Updates," which previously were held in major cities throughout the U.S. each fall. It represents an overall improvement in the transmission of annual update information because it reaches a much larger portion of the 25,000 individuals and organizations with online codes than the few hundred searchers who attended the "in-person" Updates in the past.

All articles have been prepared specifically with the MEDLARS searcher in mind. Much of the information has been derived from materials provided to the NLM indexers during their annual orientation to the new Medical Subject Headings vocabulary. Also, NLM staff and other persons have contributed information from their areas of specialization. Because of the large number of contributors, there is a variety of writing styles and search techniques.

Continued on page 3.

## GRATEFUL MED<sup>®</sup>

GRATEFUL MED Version 4.0 was released in December 1988. This version was sent to all purchasers of previous versions. Version 4.0 includes the 1989 Medical Subject Headings and, this year, explanations have been added for selected terms. Other enhancements with this version include: access to input form screens for two additional databases, AIDSLINE and SDILINE<sup>®</sup>; improved SETUP; Save Search feature; and a log to record search statistics. These and other new features were described in detail in the November 1988 issue of the *NLM Technical Bulletin*.

GRATEFUL MED Version 4.0 can be ordered from:

National Technical Information Service  
5285 Port Royal Rd.  
Springfield, VA 22161  
Telephone: (703) 487-4660

Order number: PB86-158482/GBB

Price: \$29.95 prepaid, plus \$3.00 shipping & handling.

To order GRATEFUL MED by mail use the NTIS order form which is included in the Appendix of this issue.

New orders will include the program on both 5 1/4-inch and 3 1/2-inch disks. Replacement copy mailings did not include the 3 1/2-inch disk. If you received an upgrade and require the 3 1/2-inch disk, send a mailing label to:

Federal Computer Products Center  
Attn: Lois Grooms  
National Technical Information Service  
5285 Port Royal Rd.  
Springfield, VA 22161

Please indicate that you have received the GRATEFUL MED Version 4.0 upgrade and are requesting the 3 1/2-inch disk.

The Macintosh version of GRATEFUL MED is being tested. It is expected to be available some time this year, probably in June.

\*\*\*\*\*

### Introduction

Continued from page 1.

A special effort has been made to analyze past *NLM Technical Bulletin* articles, to develop material for this issue on items which warranted elaboration. Certain items about new system capabilities that have already been covered in the *Bulletin* are not repeated. Actual search instructions and examples have been prepared, whenever possible and appropriate, to provide the searcher with a better understanding of the various changes.

Further clarification on any of these changes may be obtained by calling the MEDLARS Service Desk at 800-638-8480 (or in Maryland, 301-496-6193).

Carolyn B. Tilley  
Head, MEDLARS Management Section  
February, 1989

## MEDLINE® ON CD-ROM

As part of a one-year experimental license agreement, companies who were developing MEDLINE CD-ROM products received MEDLINE data for one year without charge. NLM required in exchange that each company place three of their products, including equipment, in institutions for evaluation purposes. Each site conducted its own evaluation. Results of these 21 evaluations were heard on September 23, 1988 at the CD-ROM Forum held at NLM.

A publication scheduled for release in Spring of 1989 will contain the report of the evaluation studies, presented by panelists and guest speakers at the event, and a "features checklist" for eight MEDLINE CD-ROM products. It will be published by:

Learned Information, Inc.  
143 Old Marlton Pike  
Medford, NJ 08055

NLM has recently released copies of videocassettes of the meeting. The videotapes are available for loan from the Regional Medical Libraries. All have been issued in both 3/4" and 1/2" (VHS) formats, so be sure to specify the desired format in your request. Call numbers are listed below for your convenience.

## Codes for GRATEFUL MED Training

Trainers may obtain non-billed codes for use when teaching database searching using NLM's GRATEFUL MED software package. If you are teaching health professionals or other individuals how to use the GRATEFUL MED program, you may request by writing (see forms in Appendix) or by telephone some non-billed codes for GRATEFUL MED use from the MEDLARS Management Section. Trainers may also use one of these codes for a few hours in preparation for the actual training. They may then

provide other codes to the trainees to practice searching using GRATEFUL MED. In the future, NLM expects to issue a short training workbook for self-study purposes or to be used as the course workbook for GRATEFUL MED training.

Information is included elsewhere in this issue regarding codes which may be obtained by students who wish to access NLM databases at the reduced student rates. Another article discusses the availability of non-billed codes for use by persons who are learning to search using the manual, *The Basics of Searching MEDLINE*, either through self-study or during a short course. The March 1989 issue of the *NLM Technical Bulletin* will contain information on the PC-based tutorial for GRATEFUL MED, *HowTo*.

## MEDLINE and Its Backfiles

### FILE SEGMENTATION

The 1989 configuration of MEDLINE and its backfiles is shown in Figure 1. Note the creation of a new backfile, MED86, which contains 2 years of data.

### SIZE

For the first time, MEDLINE is a one-year file growing to two years. This rearrangement of the data was done primarily for two reasons, given that an ELHILL® database has certain maximum limits on its size:

1. NLM will increase the number of journals indexed for MEDLINE by several hundred titles over the next few years, and
2. NLM will add abstracts for more citations beginning with 1989 journal issues, notably the Special List Nursing and Dental journals and certain non-English journals. The percentage of MEDLINE citations with abstracts is predicted to increase from about 60% to over 75%.

There will be larger SDILINE updates during 1989 of 30,000 or more citations per month, up from the 25-26,000 citations per month in 1988. NLM is estimating a total of about 350,000 citations in MEDLINE for 1989. This increase is a result of adding more indexed journal titles. New titles are listed in the "Serials Update" section in each issue of the *NLM Technical Bulletin*. This is also the reason for publishing each month's issue of 1989 *Index Medicus*® in a two-volume set.

### UPDATE SCHEDULE

MEDLINE itself is updated two times a month now at NLM. The update schedule is republished at the end of this article. These more frequent updates mean that the data are online for your use more quickly. SDILINE remains on a monthly update schedule (also republished at the end of the article) as do the SDILINE Automatic SDIs. For the most current data, you'll want to search MEDLINE. For example, the update schedule shows the following information for the May 1989 update:

| ENTRY<br>MONTH | UPDATED<br>MEDLINE/AIDSLINE | DATE OF ENTRY<br>(DA) RANGE |
|----------------|-----------------------------|-----------------------------|
| 8905 (EM)      |                             |                             |
| Part 1         | MAR 11                      | FROM 890224 TO 890309(DA)   |
| Part 2         | MAR 25                      | FROM 890310 TO 890323(DA)   |

If you do a search on March 13 and want citations from the most recent update, simply combine your strategy with: 'AND 8905 (EM)'.

If you want to repeat that same search after March 25 and retrieve only the new 8905 (EM) citations added with the Part 2 semi-monthly update, then combine your strategy with: 'AND 8905 (EM) AND FROM 890310 TO 890323(DA)'.

You need to range on Date of Entry only if you are trying to isolate citations added with the second portion of an Entry Month.

### YEARS OF COVERAGE

As part of this past year-end processing routine, NLM moved citations from MEDLINE into the appropriately named backfile on the basis of the year of publication (YR) of the cited article. We began this process in March 1988 when MED66 through MED83 were "re-leveled" by YR. Throughout the indexing year, though, NLM continues to index journal issues that were previously missed or delayed for various reasons. These citations are added to MEDLINE regardless of their year of publication. So, each December, NLM 're-levels' MEDLINE and moves the citations into the correct backfile for the year of publication. The advantages of this approach include:

1. Files are oriented by publication year (not year of indexing); and
2. Ability to pinpoint the file you need in order to search for a citation to an article you know you want to read or need to verify for an interlibrary loan request.

Newer MeSH headings will often find retrieval in older backfiles by virtue of citations being indexed with the current year's MeSH and then being moved into a backfile in December because of an older publication year. For example, ACQUIRED IMMUNODEFICIENCY SYNDROME (or AIDS) was introduced as a MeSH heading in 1983. Yet, the following interaction is reproduced from MED80:

YOU ARE NOW CONNECTED TO THE BACK80 (1980 - 82) FILE.

```
SS 1/C?
USER:
aids
PROG:
SS (1) PSTG (24)
```

There is another important point here. While it's true that these 24 citations are indexed to AIDS and are on-target retrieval, there are undoubtedly more citations in this backfile on this subject. This is because most of the citations in MED80 were indexed using the 1980, 1981, or 1982 MeSH versions when AIDS was not an available MeSH heading. It is a good idea to research the terminology for your subject and note any time limitations on the MeSH headings. Adjust your strategy to include the headings used prior to the introduction of current headings. These precursor headings can be found in the PI (Previous Indexing) field in the online MeSH Vocabulary File.

For example:

```
file mesh
PROG:
YOU ARE NOW CONNECTED TO THE MESH
VOCABULARY (1989) FILE.
```

```
SS 1 /C?
USER:
aids
PROG:
MM (AIDS) (2)
          1 AIDS (NF)
          2 AIDS (MH)
SPECIFY NUMBERS, ALL, OR, NONE-
```

```
USER:
2
PROG:
SS (1) PSTG (1)
```

```
SS 2 /C?
USER:
prt include pi
PROG:

1
MH - Acquired Immunodeficiency Syndrome
DE - ACQUIRED IMMUNODEFIC SYNDROME
DC - 1
MN - C2.782.815.483.23
MN - C2.800.801.100
MN - C20.673.483.23
FX - AIDS Serodiagnosis:3
FX - HIV Antibodies:3
FX - HIV Antigens:3
FX - HIV Seropositivity:3
PI - Immunologic Deficiency Syndromes (79-82)
```

In this case, the PI heading, IMMUNOLOGIC DEFICIENCY SYNDROMES, will probably result in too much non-related retrieval so it should be 'ANDED' with appropriate Text Words (TW).

To illustrate this example, let's search the AIDSLINE database which includes citations on AIDS from 1980 forward. NLM has already devised an AIDS search strategy to encompass the variations in terminology over time. So, a quick (YR) search should illustrate how much more directly related material we could find in MED80 on AIDS:

```
SS 2 /C?
USER:
file aidline
PROG:
YOU ARE NOW CONNECTED TO THE AIDSLINE
(1980 FORWARD, MEDLINE SUBSET) FILE.
```

```
SS 1 /C?
USER:
(yr) 80
PROG:
SS (1) PSTG (5)
```

```
SS 2 /C?
USER:
(yr) 81
PROG:
SS (2) PSTG (5)
```

```
SS 3 /C?
USER:
(yr) 82
PROG:
SS (3) PSTG (28)
```

```
SS 4 /C?
USER:
1 or 2 or 3
PROG:
SS (4) PSTG (38)
```

The (YR) search in AIDSLINE retrieves 38 citations as compared to the 24 citations found in MED80 using the search AIDS (MH). One of these additional citations just might be the important paper you were after! Of course, each search request must be evaluated in light of need versus time or cost. Not every search warrants intensive vocabulary research. The intent here is to let you realize some of the subtleties and sophisticated techniques of online searching.

## ONE FINAL WORD

The grand total of files in the MEDLINE family is now 7. This exceeds the number of databases that can be searched in one OFFSEARCH, which is 6. The following options are available to you if you need to search all 7 files:

1. Use the new MFSEARCH command to conduct a multifile search.
2. Use SAVE or SAVESEARCH to record your strategy; then, access each file, run the search name, and print the results.
3. Do an OFFSEARCH connected to MEDLINE specifying only the backfile names for the FILES? question. Finish the OFFSEARCH and then order an offline print or print online for the MEDLINE retrieval.
4. Do 2 OFFSEARCHes and divide up the file names. Recommended only if your strategy is simple to type in.

| <u>Database Name</u> | <u>Database Alias</u> | <u>Dates of Coverage</u> | <u>Approximate<br/>Number of<br/>Records</u> |
|----------------------|-----------------------|--------------------------|--|
| MEDLINE              | MED                   | 1988-89                  | 223,205<br>(as of Jan. 5)                    |
| MED86                | M86, BACK86, B86      | 1986-87                  | 639,512                                      |
| MED83                | M83, BACK83, B83      | 1983-85                  | 889,211                                      |
| MED80                | M80, BACK80, B80      | 1980-82                  | 803,271                                      |

December updates for POPLINE, CANCERLIT, and TOXLINE/TOXLIT are subject to change.

For MEDLINE and AIDSLINE updates see the "1989 Semi-monthly Update Schedule for NLM Databases."

## ELHILL 3.3 Capabilities

Articles in the October and November issues of the *NLM Technical Bulletin* introduced the new ELHILL capabilities that became operational on November 27, 1988. These articles covered the technical details and also stepped through online interactions using the new commands TFILE, SPRINT, MFSEARCH,

RETURN, and NEXT. In this article we are going to review the basic commands, show examples of the usefulness of MultiFile search in automatic mode, and highlight some new program messages. This article builds on the October and November articles. If you do not have copies of those *NLM Technical Bulletin* issues, call the MEDLARS Management service desk (301-496-6193 or 800-638-8480) to request copies of those articles.

### EXAMPLE 1 - TFILE AND SPRINT

This example shows the use of both TFILE and SPRINT. SPRINT can be used to print citations from multiple search statements, which may belong to different databases as long as you have used the TFILE command to change files. Remember that printing is still performed one search statement at a time, but by using these commands printing can be done from several databases automatically in sequence. We have not included the mechanics of the SPRINT command here. Please see the previously mentioned NLM Technical Bulletin issues for these details.

YOU ARE NOW CONNECTED TO THE MESH VOCABULARY (1989) FILE.

SS 6 /C?  
 USER:  
 sprint

- Since I used TFILE to change databases, I can print from several files at one time using the the SPRINT command.

PROG:  
 SSNOS?

USER:  
 1,2,5  
 PROG:

READY TO PRINT FROM SEARCH STATEMENT 1, CONTAINING 79 ITEM(S) FROM MEDLINE.

ENTER SPECIFICATIONS FOR PRINTING (E.G., BR, SD, FU, DL), OR 'SAME' (DO NOT USE THE WORDS 'PRINT' OR 'PRT'):

- I must answer the SPRINT prompts which will follow according to my needs. Remember that in SPRINT the program allows printing from one search statement at a time.

EXAMPLE 2 - SEARCH FROM EXAMPLE 1 USING MFS AUTO MODE

This example shows a search similar to the one run in EXAMPLE 1, but this time executed in MFSEARCH AUTO mode. On the first line along with the MFS command we have named the files to be searched and entered the phrase MODE=AUTO. This is the preferred way to begin a MultiFile Search session as long as you are sure what files, mode, and even searchname you want to use. Also, in this second example, we have used the NEXT command in order to execute this strategy in a database that was not named initially.

YOU ARE NOW CONNECTED TO THE MEDLINE (1988 - 89) FILE.

SS 1 /C?  
 USER:  
 mfs medline, cancer, toxlit mode=auto

- I am telling the system that I want to run an automatic MultiFile search in MEDLINE, CANCERLIT, and TOXLIT.

ENTER SPECIFICATIONS FOR PRINTING (E.G., BR, SD, FU, DL), OR 'SAME' (DO NOT USE THE WORDS 'PRINT' OR 'PRT'):

.  
.  
.  
● SPRINT prompts must be answered.

EXAMPLE 3 - WHEN TO USE MFS IN AUTO MODE

This includes three examples of using MFS in the AUTO mode. AUTO mode is especially useful when you need to search several files at one time and you expect that the entire retrieval will be needed. Remember that you must still answer both Multi Meaning and Time Overflow messages in each file.

EXAMPLE 3A - SEARCHING FOR A UI THAT SEEMS TO BE A RECENT ONE BUT ISN'T IN THE CURRENT MEDLINE FILE

We searched for a Unique Identifier (UI) that appeared to be a recent one but wasn't in the current MEDLINE file. We entered the MFS command, the files to be searched and the MODE=AUTO command all on the same line. The files were selected using a convention that has not been covered in previous articles: MEDGROUP@MED86 means that we want to search the MEDGROUP databases beginning with MED86 back through MED66 (the MEDLINE file would be excluded).

YOU ARE NOW CONNECTED TO THE MEDLINE (1988 - 89) FILE.

```

SS 1 /C?
USER:
mfs medgroup@med86 mode=auto
PROG:
SEARCH TO BE RUN ALREADY EXISTS. DO YOU WISH TO REPLACE IT? (Y/N)

```

● I would like to do an MFsearch in auto mode beginning with MED86 moving back through MED66. At any USER: prompt, type EXPLAIN FILEGROUPS for an explanation of this convention. Using BACGROUP would have requested searching the same set of files.

EXAMPLE 3C - SEARCHING FOR ARTICLES ON A PARTICULAR SUBJECT WRITTEN BY AN AUTHOR

We used MFS in AUTO mode to look for articles written by an author on a particular subject. Once again we entered the MFS command, the files to be search and the MODE=AUTO command all on the same line. By requesting MEDGROUP!B80, we are asking the system to search the MEDGROUP from the current MEDLINE file back through the MED80 file. Both of these FILEGROUP conventions can be used with any FILEGROUP and its component databases. Type EXPLAIN FILEGROUPS at any USER: prompt for an explanation of the FILEGROUPS and these highlighted conventions.

YOU ARE NOW CONNECTED TO THE MEDLINE (1988 - 89) FILE.

Once again it is our hope that this article and those in previously mentioned issues of the *NLM Technical Bulletin* will acquaint searchers with the ELHILL 3.3 capabilities. We have tried to cover many variations of

these features, but have not been comprehensive. As announced in the October 1988 *NLM Technical Bulletin*, non-billed codes are available from MEDLARS Management Section so that you can try out these new features.

## 1989 MeSH Vocabulary File<sup>®</sup>

### NEW VOCABULARY

Summary (from *MeSH Annotated Alphabetic List*, 1989, p. I-3):

319 descriptors (293 major, 26 minor) representing concepts with no directly corresponding headings in 1988 MeSH (i.e., new concepts and records); includes 5 geographic descriptors;

35 descriptors were replaced with more up-to-date terminology;

4 descriptors were deleted;

32 minor descriptors were elevated to majors;

3 changes in topical subheadings: 1 completely new, 2 replaced;

7 geographic subheadings added for cataloging;

12 form subheadings for cataloging;

767 see references (entry terms, print).

### AIDS-RELATED TERMINOLOGY

The following are all AIDS related headings in 1989 MeSH, shown indented as they appear in the *MeSH Tree Structures*. New terms are marked with # and appear with scope notes in the introduction to the *MeSH Annotated Alphabetic List*.

#### HTLV Infections

Acquired Immunodeficiency Syndrome (AIDS, HTLV-III Infection, HIV Infection, etc.)

AIDS-Related Complex

HIV Seropositivity

HTLV-I Infections #

Leukemia-Lymphoma, T-Cell, Acute, HTLV-I-Associated #

HTLV-II Infections #

Leukemia, T-Cell, HTLV-II-Associated #

Paraparesis, Tropical Spastic #

HTLV Viruses (replaces T-Cell Leukemia Virus)

HIV (HTLV-III)

HIV-1 # (cause of most cases of AIDS)

HIV-2 #

HTLV-I

HTLV-II

Simian Retroviruses #

SIV # (said to induce AIDS on monkeys and apes)  
(STLV-III)

STLV-I #

STLV-II #

HTLV Antibodies #

HIV Antibodies (HTLV-III Antibodies)

HTLV-I Antibodies #

HTLV-II Antibodies #

HTLV Antigens #

HIV Antigens (HTLV-III Antigens)

HTLV-I Antigens #

HTLV-II Antigens #

AIDS Serodiagnosis

T4 Lymphocytes # (critical subpopulation of regulatory T-Lymphocytes; depletion of this subset is key element in immunopathogenesis of HIV infection)

### BIOTECHNOLOGY AND MOLECULAR BIOLOGY

All terms below are new for 1989, except as noted, and thus appear with scope notes in the introduction to the *MeSH Annotated Alphabetic List*.

Biological Markers

Biosensors

Blotting, Southern Blotting, Northern Blotting, Western (Immunoblotting, Western; may be used to detect HIV infection.)

DNA Restriction-Modification Enzymes

DNA Modification Methylases

DNA Modification Methylases (Adenine-Specific)

DNA Modification Methylases (Cytosine-Specific)

DNA Restriction Enzymes [existing heading]

Deoxyribonucleases, Type I, Site-Specific

Deoxyribonucleases, Type II, Site-Specific

Deoxyribonuclease BamHI

Deoxyribonuclease EcoRI

Deoxyribonuclease HindIII

Deoxyribonucleases, Type III, Site-Specific

Gene Rearrangement (rearrangement of variable gene

regions, especially for antibody genes)  
 Gene Rearrangement, B-Lymphocyte  
   Gene Rearrangement, B-Lymphocyte, Heavy Chain  
   Gene Rearrangement, B-Lymphocyte, Light Chain  
 Gene Rearrangement, T-Lymphocyte  
   Gene Rearrangement, Alpha Chain T-Cell Antigen Receptor  
   Gene Rearrangement, Beta Chain T-Cell Antigen Receptor  
   Gene Rearrangement, Gamma Chain T-Cell Antigen Receptor

Genetic Engineering (replaces Genetic Intervention)  
 Gene Therapy (introduction of new genes into cells to treat disease, by restoring or adding gene expression)  
 Protein Engineering (changing structural genes in order to produce mutant genes)

Interferon Alfa, Recombinant (a type I interferon produced by recombinant DNA technology, having antiviral and antineoplastic activity)  
 Interferon Alfa-2A (produced by recombinant DNA technology, resembling interferon secreted by leukocytes)  
 Interferon Alfa-2B

Interferon Gamma, Recombinant

Molecular Probe Technics

Molecular Probes  
 Nucleic Acid Probes  
   DNA Probes  
     DNA Probes, HLA (specific for human leukocyte antigen genes)  
     DNA Probes, HPV (for identification of human papilloma virus)  
   Oligonucleotide Probes  
   RNA Probes

Restriction Mapping (use of restriction endonucleases to analyze and generate a physical map of genomes or genes)

## EPIDEMIOLOGY

The subheading /epidemiology replaces the previously existing subheading /occurrence, but has been given a new scope note: "Used with diseases for the distribution of disease, factors which cause disease, and the attributes of disease in defined populations; includes incidence, frequency, prevalence, endemic and epidemic outbreaks; also surveys and estimates of morbidity in

geographic areas and in specified populations. Excludes mortality for which /mortality is used."

Existing headings indented under Epidemiological Methods include: Clinical Trials; Data Collection; Health Surveys; and Study Design.

New Headings:

Cohort Studies (identification of subsets of a defined population)

Incidence Studies (study of the number of new cases of a disease)

Meta-Analysis (based on combining research results and synthesizing summaries)

Multicenter Studies (done by several cooperating institutions)

Prevalence Studies (study of the number of cases of a disease - old and new)

Reproducibility of Results (statistical reproducibility of measurements)

## RETRACTED PUBLICATION

This heading is added to citations to original articles that have been retracted. It is the companion to the existing heading Retraction of Publication, identifying articles announcing retraction of earlier articles.

## STOMATOGNATHIC DISEASES

The heading Mouth and Tooth Diseases (Non MeSH) was changed to Stomatognathic Diseases and made indexable. Two additional existing groups of headings are now indented under it: Jaw Diseases; Pharyngeal Diseases.

## SUBHEADINGS

In addition to the subheading /epidemiology, noted above, two other changes have been made. A new subheading has been added:

/statistics & numerical data

"Used with non-disease headings for the expression of numerical values which describe particular sets or

groups of data; excludes manpower distribution for which /manpower is used; excludes supply or demand for which /supply & distribution is used."

Also, the subheading /familial & genetic was deleted, and replaced in all citations by the existing subheading /genetics, for which a new scope note has been written:

"Used for mechanisms of heredity and the genetics of organisms, for the genetic basis of normal and pathologic states, and for the genetic aspects of endogenous chemicals; includes biochemical and molecular influence on genetic material."

### HN (history note) data element for subheadings

The HN data element for descriptors has existed for some time, giving the changes in the form of the heading and related terms. This is now available for subheadings, so that subheading replacements and other changes may be noted. The date in which the subheading appeared in its present form is also given. For example, the HN for /epidemiology is "89; was /occurrence 66-88." The HN is printed in the *Annotated Alphabetical List*.

### MESH FILE CHANGES

Some of the following changes are due to the fact that NLM is using a new computer system for inputting data to the MeSH file; these were implemented January 30. Other changes have been made throughout the year.

#### AQ (Allowable Qualifiers) - descriptor records only

This element has been added to descriptor records to display all allowable subheadings permitted with that descriptor in indexing. For example, in the record for Analgesia, the AQ entry is:

AQ - AE CL EC ED HI IS MO MT NU PX SD  
SN ST TD UT VE

Only those subheadings whose two-letter mnemonic appears in this list, may be used by indexers with Analgesia. If the mnemonic is not on the list, the subheading is prohibited. This element replaces the function of the TN (Tree Node Allowed) element in the corresponding Qualifier record, and provides greater flexibility. Also, since some entries in the EC (Entry Combination) element were used to prohibit a particular heading/subheading combination, these entries have been deleted as redundant.

The element is directly searchable; for example, to find all descriptors that can take the subheading /epidemiology, enter the two-letter abbreviation as follows:

SS 1/C?  
USER:  
ep (aq)

### BX - expanded non-print entry terms all marked with @

Many BX type 0 (non-print entry terms) entries are generated by the computer as expansions or permutations of the MH, BX type 1 (print entry term) and other BX type 0. Previously, these entries were marked either by trailing asterisks or @ signs. Now, however, all of these automatically-generated terms are marked with the @ sign. For example:

```
MH - Ascitic Fluid
BX - Peritoneal Fluid:0:00000000:0000000:830422
BX - Peritoneal Effusion:1:00000000:0000000:830422
BX - Fluid, Ascitic:0:00000000:0000000:#####
BX - Ascitic Fluids:0:00000000:0000000:#####
BX - Fluids, Ascitic:0:00000000:0000000:#####
BX - Fluid, Peritoneal:0:00000000:0000000:#####
BX - Peritoneal Fluids:0:00000000:0000000:#####
BX - Fluids, Peritoneal:0:00000000:0000000:#####
BX - Effusion, Peritoneal:0:00000000:0000000:#####
BX - Peritoneal Effusions:0:00000000:0000000:#####
BX - Effusions, Peritoneal:0:00000000:0000000:#####
```

### BX - expanded non-print entry terms follow type 1

Until now, the expanded entry terms have been displayed with other BX type 0 values. Now, however, regular BX type 0's (identified by having a date) are displayed first, then type 1's, then expanded. See above example.

### DX and DY data elements rangeable and directly searchable

Before 1989 neither the DX nor the DY data element could be directly searched. Stringsearching was the only means available for retrieving all headings becoming majors or minors in a given year. Now both may be searched directly and by range.

The DX gives the six-digit date when a term was first available for searching as a major descriptor. The format is YYMMDD, e.g., 750101. (The month and day are usually 01 and 01.) Thus, for example, to find all

terms which were made available as major descriptors in 1985, you can enter:

SS 1/C?  
USER:  
850101 (dx)

The DY gives the corresponding date when a term first became available as a minor descriptor and is searched similarly.

To search for all terms which were made available as minor descriptors after 1985, you would enter:

SS 1/C?  
USER:  
7 (dc) and from 850101 to 999999 (dy)

#### MED86 POSTINGS DATA ELEMENT

MEDLINE (and backfile) postings are input annually into the corresponding data elements in the MeSH file. With the introduction of the MED86 backfile, there is a corresponding new data element for descriptors and qualifiers - M86 - which contains the number of postings in the citation file. A second occurrence may exist, containing the starred postings. These fields were updated for 1989 on December 20, 1988 after MEDLINE was regenerated and augmented with data through the 8901 (EM) update.

#### MR - ONLY ONE OCCURRENCE

In previous MeSH files the MR (Major Revision Date) may have had multiple occurrences, but there is now only one occurrence, which will be the date of the most recent modification to the record.

#### RO - O AND C SUBELEMENTS REQUIRED FOR EACH RECORD

Before now, the O (originator) and C (checker, i.e., authorizer) subelements were not required, but now must occur exactly once. For example, in the record for the descriptor HIV, the RO entries are:

RO - O:RC  
RO - C:NLM  
RO - M:PLS

In cases where the individual's initials are not known for a given subelement, "NLM" is used.

#### RO - ONLY ONE OCCURRENCE FOR EACH SUBELEMENT

In previous versions of the MeSH file, the M (maintainer) subelement sometimes had multiple occurrences, while now only one is allowed.

#### TH - VALUE IN ALL DESCRIPTOR RECORDS

When the entry for the MH or BX type 0 or 1 matches an entry in one of a given set of external thesauri, the name of that thesaurus appears in the TH (Thesaurus ID) element. Beginning with 1989 MeSH, this value will be "NLM" if no other name has been entered. For example in the record for HIV, TH appears as:

TH - NLM

## Short Forms

Many words or word roots that are frequently found as part of MeSH Headings (for example, CLASSIFICATION, DISEASE, INJUR-) have a Short Form (CLASS, DIS, INJ, respectively) which may be used for searching. For example, the MeSH Heading, EYE INJURIES may be searched as EYE INJ.

The new short forms added for 1989 are:

### MOL

for MOLECULAR - as in MACROMOL SYSTEMS; MODELS MOL; MOL BIOLOGY; MOL SEQ DATA

### ORG

for ORGANIC - as in CHEM ORG; CHEM INORG; METALLO ORG CPDS

### REV

for REVIEW - as in REV REPORTED CASES; REV MULTICASE

### SOL

for SOLUTIONS - as in HYPOTONIC SOL; OPHTHALMIC SOL

The entire list of short forms can be found on page I-10 of the *Annotated Alphabetic List, 1989*. One exception to the printed list is DIAG (short form for DIAGNOSIS). If the searcher tries to use this short form, the following will result:

SS 1/C?

USER:

diag oral

PROG:

STORED SEARCH 'ORAL; CANNOT BE FOUND.

The system is interpreting DIAG to be an alias for the command DIAGRAM. In order to get retrieval from a heading with the string DIAGNOSIS-, the searcher should type out the heading as it is listed in the *Annotated Alphabetic MeSH*.

SS 2/C?

USER:

diagnosis, oral

PROG:

SS (2) PSTG (4)

Note that short forms can be used with EXPLODE but not with PRE-EXPLOSIONS.

\*\*\*\*\*

## More Abstracts Online

Beginning with journals published in 1989, the National Library of Medicine will increase the number of abstracts added to the MEDLINE database. English abstracts will be taken from all indexed journals that publish them. Of noticeable importance is that there will be more abstracts online from special list journals in the fields of nursing and dentistry. The 250-word limit will still be followed. The percentage of abstracts online

in the MEDLINE database is expected to increase from 60% to over 75%.

Please note that NLM does not edit any author abstracts. Users may, therefore, notice neologisms and stylistic peculiarities in English abstracts from some foreign language journals. We hope that the additional information provided by these abstracts will outweigh occasional grammatical shortcomings.

## New MEDLINE Field: Comments

A broad range of items appears in the medical literature with the purpose of commenting on previously published articles. These comments are published in letters to the editor, editorials, or articles that update other articles. By citing these comments and including the reference of the original article, NLM will connect articles with subsequent, substantive comments. Therefore, beginning with 1989 journal issues, published comments will be cited in MEDLINE and a new field, Comments, abbreviated "CM", will be added to these citations. The field, when present in citations, will print in all standard PRT commands (SD, FU, DL, AR) after the Number of References (RF) field and before the Source (SO) field.

As a first phase in implementing this policy, NLM will be concerned primarily with citing comments that are published for the express purpose of adding substantive information to that published in the original article. Of special interest will be instances where an author has not retracted an article, but an editor, for example, issues a comment alerting readers to questionable data in the published article.

The Comments field will appear on records that comment about another article previously published in the same journal, and will also be added to the citation for the article to which the commenting article refers.

Comments will be indexed with MeSH terms as appropriate.

Both AIDSLINE and the HEALTH PLANNING & ADMINISTRATION file will also carry the Comments field.

An example of how both types of citations will look follows:

### Commenting article:

TI - Notification to readers [comment]  
 CM - Comment on: Psychopharmacol Bull 1982  
 Jan;18(1):57-9  
 SO - Psychopharmacol Bull 1987;23(4):588

### Original article:

AU - Breuning SE  
 TI - An applied dose-response curve of thioridazine  
 with the mentally retarded: aggressive,  
 self-stimulatory, intellectual, and workshop  
 behaviors--a preliminary report [see comments]  
 CM - Comment in: Psychopharmacol Bull 1987;  
 23(4):588  
 SO - Psychopharmacol Bull 1982 Jan;18(1):57-9

Notice that the rubric, [comment] appears in the title of the commenting article and, [see comments] appears in the title of the original article. (Because rubrics appear in the title, they are Text Word (TW) searchable.)

Some comments may not merit indexing as a separate citation. If NLM indexed the original article, the CM field will be added to that citation linking it to the comment although the comment itself is not indexed.

## Retracted Publication and Retraction of Publication

RETRACTED PUBLICATION is a new MeSH heading for 1989. It is used to identify an article previously cited in *Index Medicus* or MEDLINE as having been retracted by a later article.

Titles of articles indexed with this heading carry one of the following rubrics:

[Retracted by author A, author B. In: Journal A citation]

[Retracted in: Journal A citation]

During 1988 Year-End processing, this heading was added to appropriate citations retrospectively in MEDLINE and its backfiles, HEALTH, and CANCERLIT®. Usually this heading will be added to an existing citation through an editing action. Therefore this heading will appear in the annual *Cumulated Index Medicus* but is unlikely to appear in the monthly *Index Medicus* issues. The citations needing this new heading were identified by searching on the MeSH heading RETRACTION OF PUBLICATION explained in the second illustration.

When searching for articles that have been retracted, use RETRACTED PUBLICATION as in Figure 1.

```

● Note that the citation still includes the original subject headings used to index the article in addition to RETRACTED PUBLICATION.

Figure 1

RETRACTION OF PUBLICATION which has been a MeSH heading since 1984, is used for the citation to an article that is retracting an article or part of an article previously indexed in *Index Medicus* or MEDLINE. This heading is used exclusively for the notice of a specific retraction. For an article discussing the subject of "retraction of fraudulent data" the correct MeSH heading for indexing and retrieval is PUBLISHING.

Titles of articles indexed to this heading carry the rubric:

[Retraction of author A, author B. In: Journal a citation]

To search for retractions, use RETRACTION OF PUBLICATION as seen in Figure 2.

By using these two MeSH headings you will be able to find the article that has been retracted and/or the article announcing its retraction. It is not unusual for one retraction notice to retract several previously published papers. Another item to remember is that the retraction citation may appear in MEDLINE while the retracted citation(s) may be in an earlier backfile. These reasons explain why the postings for two related MeSH headings do not match up in any one file segment. The NLM practice of linking the related citations by enhancing the

Title (TI) field specifies the relationship.

The following chart reflects the number of postings in MEDLINE and its backfiles, HEALTH, and CANCERLIT for these headings through the Entry Month (EM) of 8902.

|           | RETRACTED PUBLICATION | RETRACTION OF PUBLICATION |
|-----------|-----------------------|---------------------------|
| MEDLINE   | 0                     | 2                         |
| MED86     | 5                     | 14                        |

Figure 2

## One Pre-Explosion Name Change

One Pre-explosion has changed its name for 1989: MOUTH AND TOOTH DISEASES is now STOMATOGNATHIC DISEASES. The tree number, C7, remains the same. NLM made this change retrospectively in all databases that use Pre-explosions, effective December 12. The old name will not map; the new name must be used in searching. You should edit

any saved or stored searches containing the old name.

Pre-explosions (PX) are MeSH Headings (MH) that have already been EXPLODED and stored to facilitate the retrieval of large numbers of citations. The list of Pre-explosions was published in the October issue of the *NLM Technical Bulletin*. No new Pre-explosions were added for 1989. The search shown below uses the new Pre-explosion name to retrieve all articles on stomatognathic diseases (includes diseases of the mouth, teeth, jaws, and pharynx) in the newborn infant.

## New Dental Journal Subset Tag

A new value for the Journal Subset (SB) field in MEDLINE, its backfiles, AIDSLINE, and HEALTH has been defined. The letter "D" has been placed in the Subset (SB) field on citations from all dental journals, regardless of whether the journal is an *Index Medicus* journal or not. This new tag is added not only to appropriate new records as they are created and indexed for MEDLINE, but it also has been added retrospectively to all records from dental journals. Therefore, it is now possible to limit any MEDLINE search to articles from dental journals by combining your strategy with AND D (SB).

This is not to be confused with the more restrictive Special List Indicator (LI) designation. A value of D in the LI field on MEDLINE records indicates that the article comes from a non-*Index Medicus* journal in the

field of dentistry. D (SB) is more inclusive; it includes these records as well as the records from the more than 60 currently indexed *Index Medicus* dental journals. Searching on D (LI) limits your retrieval to non-*Index Medicus* records only while D (SB) limits your retrieval to any dental journal. This is illustrated in Figure 1.

Now searchers may delete the dental journal saved searches they have created and free up more of their saved search space. Limiting retrieval to citations from the dental journal literature is as easy as typing:

...AND D (SB)

SERLINE® also contains this new D (SB) tag. The strategies found in Figure 1 can be used in SERLINE to see which dental journals have been or are currently indexed.

NLM is considering the removal of the D value in the LI field in MEDLINE due to its limited usefulness.

Figure 1

## Indexing Policy Changes

The following presentations reflect changes in indexing policy for 1989.

### Infections Caused by Human Immunodeficiency Viruses or Simian Immunodeficiency Viruses

Because of the significance of both human immunodeficiency viruses and simian retroviruses

in AIDS and related research, there has been a change in the indexing of infections caused by these viruses. Beginning with 1989 indexing, both the organism and the infection will be indexed as the main point of the article and will appear online with an asterisk (\*). Note that this is an exception to the usual rule of indexing the organism as "NIM" (without an \*) and the infection as "IM" (with an \*). The MeSH headings effected by this indexing change include: HTLV INFECTIONS, HIV, HTLV-I, HTLV-II, SIV, STLV-I, and STLV-II.

You would search both with an asterisk :

Figure 1B

## Combined Antibiotics

The new 1989 MeSH heading ANTIBIOTICS, COMBINED is defined as two, sometimes three, antibiotics given simultaneously or sequentially, not necessarily in the same dosage form. The individual antibiotics are indexed as "IM" (which means for *Index Medicus*, using a \*) and ANTIBIOTICS, COMBINED is

indexed as "NIM" (which means not for *Index Medicus*, without a \*). ANTIBIOTICS, COMBINED is indexed as IM in articles discussing the formulation or other issues focusing on properties or modes of action of combination antibiotics.

To search for the combined administration of ampicillin and metronidazole, you would use the following search strategy:

Figure 1

## Changes in the Subheading Surgery

Beginning with 1989, indexing policy regarding the subheading /surgery has changed. It was prior indexing policy to use the subheading /therapy for interventions on organs to cure certain diseases by interference with their function. For example, adrenalectomy in the treatment of breast cancer was indexed under \*ADRENALECTOMY and BREAST NEOPLASMS/\*th, not BREAST NEOPLASMS/\*su.

From now on, any surgical intervention in treating a disease will be indexed under the subheading /surgery with the disease, whether or not the organ being operated on is involved in the disease or whether or not the purpose is to modify function. So in the example shown above, 1989 indexing is \*ADRENALECTOMY and BREAST NEOPLASMS/\*su.

Searchers should use both ways of searching when doing retrospective searches.

Figure 1 contains an example of a search in MEDLINE on castration in treating prostatic cancer.

## Extended Subheadings

More subheadings have been "extended" for 1989. This means that they may be used with even more MeSH headings than allowed to them before. The subheadings and the MeSH headings involved for 1989 are listed in Figure 1. As has been the custom for the last few years, many extensions are limited to specific nodes within a category. However, in addition, several subheadings are now extended to more entire categories for 1989 as shown.

Usually all MeSH annotations are altered or updated in the printed tools for the changes made in MeSH or indexing policy. However, for 1989, there is one large exception to this rule. All Category B2 (Organisms-Vertebrates) headings were opened up to two new allowable subheadings for 1989 indexing: /abnormalities, and /injuries. This change is indicated in the 1989 *Annotated Alphabetic MeSH* on pages I-95, I-98, I-103, I-104, and I-108. However, there was not enough time to update the annotation for each B2 heading in the body of the MeSH list. For example, the entry for HORSES reads as follows:

### HORSES

B2.646.709.472

IM; when IM, only /anat /blood-csf-urine /class /embryol /genet /growth /immunol /metab /microbiol /parasitol /physiol /surg; does not include zebras nor mules (= PERISSODACTYLA); consider also terms under EQUINE

While /abnorm and /inj are not specifically listed, they are legal for 1989 indexing.

For example, the subheading /abnormalities may now be used with MeSH Headings in the B2 Category-Organisms-Vertebrates for all articles indexed for the 1989 system forward. The searching abbreviation for the abnormalities is AB. Before 1989, the AB subheading was not allowed with Category B2 terms. In order to retrieve articles indexed before and after this change, the strategy below could be used. This search retrieves articles about abnormalities of the portal system in a dog.

In this example, PORTAL SYSTEM was exploded to retrieve any specific terms indented under the term. Since the AB subheading has been extended to Category B2, search DOGS/AB AND PORTAL SYSTEM/AB to retrieve references indexed for the 1989 system forward. To retrieve references indexed before the 1989 system, use DOGS combined with PORTAL SYSTEM/AB. Because the current MEDLINE file contains articles indexed before and after the "extension" the example below combines both approaches.

| 5. abnormalities                    | AB                   | ORGANISMS-VERTEBRATES (B2+)  |
| 6. injuries                         | IN                   | ORGANISMS-VERTEBRATES (B2+)  |

As is always true, use these new assignments - especially those for LJ and OG - in rational combinations. That is, in G3, CONSUMER PRODUCT SAFETY/LJ is fine, WATER MOVEMENTS/LJ is silly.

## New and Changed Subheadings

The subheading /familial & genetics has been deleted and /genetics has taken its place. Last year the application of /genetics was extended. Two additional extensions are in the system for 1989: ETHNIC GROUPS+ and RACIAL STOCKS+. Please see the article on extended subheadings in this issue.

Two subheadings have been introduced for 1989 to replace the subheading /occurrence which was limited to use only with diseases. These are /epidemiology (for diseases) and /statistics & numerical data (for other concepts).

All references incorporating the deleted subheadings (/familial & genetic, /occurrence) have been changed from the old to the new versions in the MEDLINE, Backfiles, AIDSLINE, HEALTH and CANCERLIT databases.

### /epidemiology

The subheading /occurrence has been deleted. In its place, a new subheading, /epidemiology, has been assigned to the same disease terms in Categories C and F3. The searching short form is /EP. /epidemiology includes incidence, frequency, prevalence, occurrence, statistics, etc., of diseases in Categories C and F3. An outbreak of a disease can be searched with the MeSH heading for the name of the disease with the subheading /epidemiology attached. This MeSH/subheading combination can be coordinated with DISEASE OUTBREAKS.

The field of epidemiology indexing has been enhanced. Not only have two new subheadings been created, but several new MeSH headings have been created as well. These new 1989 MeSH headings are:

COHORT STUDIES  
MULTICENTER STUDIES  
PREVALENCE STUDIES  
INCIDENCE STUDIES

A new (NON MESH) term has also been added to gather citations easily for searchers: STUDY DESIGN (NON MESH)

To use this heading type in the following:

SS 1 /C?  
USER:  
exp study design (non mesh)

PROG:  
SS (1) PSTG (5385)

By exploding STUDY DESIGN (NON MESH), searchers would retrieve all citations indexed to the following headings:

CLINICAL PROTOCOLS  
DOUBLE-BLIND METHOD  
FEASIBILITY STUDIES  
PILOT PROJECTS  
RANDOM ALLOCATION  
SAMPLING STUDIES

These new headings can be used along with the other epidemiologic concepts which include such headings as: FOLLOW-UP STUDIES, PROSPECTIVE STUDIES, and RETROSPECTIVE STUDIES. In general, an epidemiological study will be indexed:

- under the name of the disease with the subheading /EP

- under the old or new epidemiologic MeSH heading, with no subheading

Please see the examples in MEDLINE that follow in Figure 1.

### /statistics & numerical data

A new subheading /statistics & numerical data has been assigned by MeSH to Categories E, F1-2, F4, G1-3, H-N. Pair /SN in sensible combinations. That means that while for Category I, DIVORCE/sn is reasonable, QUALITY OF LIFE/sn is not. The searching short form is /SN for 1989 forward.

There are now several subheadings (consider using these in a SUBS APPLY) that cover the concept of "statistics" as outlined in Figure 2.

These changes in subheadings will impact your saved and stored searches. If you have not already done so, examine each saved strategy for the presence of the old subheadings /OC and /FG. If the strategy contains one of these it should be deleted and a new strategy entered, incorporating the new subheadings /EP and /GE, respectively. You may also want to use the new subheading /SN in your saved and stored searches.

WELCOME TO THE NATIONAL LIBRARY OF MEDICINE'S ELHILL RETRIEVAL SYSTEM. YOU ARE NOW CONNECTED TO THE MEDLINE (1988 - 89) FILE.

## New Review Indexing Policy - Results One Year Later

Last year, in the first edition of the "MEDLARS Update", a special issue of the *NLM Technical Bulletin* (Supplement No. 1, March 1988), NLM presented a major change in the indexing policy for review articles. The scope of what constitutes a review article was broadened, and specific types of review headings were introduced for 1988 indexing. Last March, NLM staff made the following prediction: "...it is projected that the REVIEW tag will be used on almost

twice as many records during 1988 than it was during 1987!" One year later that prediction has proven to be true. See Figure 1 for details. In 1987, 4.4% of the citations added were indexed with REVIEW; in 1988, the percentage grew to 7.9%. We hope this expanded coverage has improved your searching for reviews. The new types of review headings are shown in Figure 2 with total postings for the 1988 indexing year. The most commonly used specific review heading by far was REVIEW, TUTORIAL. Please refer to the online MeSH Vocabulary File records or the GRATEFUL MED help screens if you need definitions for these review headings in Figure 2.

TABLE 1  
REVIEW ARTICLES  
1987 and 1988 Indexing Years

| Entry Month | Review Articles | Total Citations | Percent | Entry month | Review Article | Total Citations | Percent |
|-------------|-----------------|-----------------|---------|-------------|----------------|-----------------|---------|
| 8701        | 847             | 24,364          | 3%      | 8701        | 1,516          | 23,790          | 6%      |
| 8702        | 889             | 21,636          | 4%      | 8702        | 1,716          | 24,946          | 7%      |
| 8703        | 1,168           | 25,110          | 5%      | 8703        | 2,173          | 26,727          | 8%      |
| 8704        | 971             | 23,055          | 4%      | 8704        | 2,352          | 28,756          | 8%      |
| 8705        | 1,159           | 26,609          | 4%      | 8705        | 2,304          | 27,159          | 8%      |
| 8706        | 1,143           | 26,992          | 4%      | 8706        | 2,602          | 27,874          | 9%      |
| 8707        | 1,144           | 26,794          | 4%      | 8707        | 2,012          | 28,967          | 7%      |
| 8708        | 1,285           | 27,448          | 5%      | 8708        | 2,098          | 28,030          | 7%      |
| 8709        | 1,187           | 27,125          | 4%      | 8709        | 2,545          | 29,206          | 9%      |
| 8710        | 1,298           | 27,915          | 5%      | 8710        | 2,401          | 28,616          | 8%      |
| 8711        | 1,397           | 26,788          | 5%      | 8711        | 2,162          | 25,566          | 8%      |
| 8712        | 1,318           | 26,786          | 5%      | 8712        | 1,876          | 26,894          | 7%      |
| TOTAL       | 13,800          | 310,712         | 4.4%    | TOTAL       | 25,757         | 326,531         | 7.9%    |

December 1988

Figure 1

| <u>SPECIFIC REVIEW HEADING</u> | <u>TOTAL POSTINGS FOR 1988 INDEXING*</u> |
|--------------------------------|--|
| REVIEW, ACADEMIC               | 3,660                                    |
| REVIEW LITERATURE              | 512                                      |
| REVIEW, MULTICASE              | 502                                      |
| REVIEW OF REPORTED CASES       | 2,172                                    |
| REVIEW, TUTORIAL               | 19,432                                   |

\*Total does not add to 25,757 found in Table 1 because one citation may be given more than one of the specific review headings under the 1988 indexing policy for reviews.

Figure 2

## Highlights of 1989 MeSH Headings in Selected Fields

The following pages contain hedges of related main headings (most of them new for 1989) in the areas

of leukemia and ophthalmology. These lists were created to make you aware of some of the broad categories in the MeSH vocabulary that underwent major changes for 1989. They are not meant to be exhaustive; but to serve as reminders of areas in the MeSH Vocabulary that contain some enhancements.

\*\*\*\*\*

### Ophthalmology and Optometry Vocabulary

Suggestions from the Vision Science Librarians and Index Section resulted in the following new MeSH headings for 1989 indexing.

C11 DRY EYE SYNDROMES  
 GLAUCOMA, NEOVASCULAR  
 OPTIC ATROPHY, HEREDITARY  
 RETINAL ARTERY OCCLUSION  
 SCLERAL DISEASES  
     SCLERITIS  
 VISION, LOW

E1 VISION SCREENING  
 E4 EYE ENUCLEATION  
 G11 VISION, BINOCULAR  
 VISION, MONOCULAR  
 CONTRAST SENSITIVITY  
 VISION DISPARITY

## 1989 Leukemia Tree Changes

The 1989 leukemia terms (C4.557.337+) are now classified both morphologically and immunologically. The three primary features of the new arrays are:

1) the basic division into 4 main morphological components (hairy cell, lymphocytic, myeloid, and plasmacytic);

2) the incorporation of immunologic markers (B-cell, T-cell, mixed, and null); and

(LEUKEMIA) C4.557.337+

LEUKEMIA, PROMYELOCYTIC, ACUTE

(LEUKEMIA, PLASMACYTIC)

3) the explicit separation of the acute and chronic leukemias into distinct disease entities.

The 1989 leukemia terms are listed below. A heading enclosed in parentheses indicates an old (pre-1989) MeSH heading.

As you can see from this listing, the leukemia MeSH headings have been enhanced and expanded. This should make searching in this subject area more precise.

## Tree Changes

As happens every year, MeSH improves the position of individual terms on various branches or twigs of Trees. "Trees" refers to the hierarchical arrangement of MeSH headings into one or more of 15 major subject categories. These changes in the Trees seldom affect indexers; searchers should probably peruse them more carefully.

As usual there are many Tree changes in the usual way for the usual reasons: repositions required because of the addition of the new terms, because of the deletion of some terms, because of the re-indentation of still more.

Only a summary of the major Tree changes is given here. It is suggested that you routinely check the printed Tree Structures or use the TREE command online in order to view the categories and indentions.

### CATEGORY B4

RETROVIRIDAE under both ONCOGENIC VIRUSES and RNA VIRUSES were expanded to accommodate the SIMIAN RETROVIRUSES.

Minor re-arrangements were made for the new HIV breakdown.

### CATEGORY C1

SEXUALLY TRANSMITTED DISEASES was rearranged for the new SEXUALLY TRANSMITTED DISEASES, BACTERIAL.

### CATEGORY C2

Likewise a change was made for the new SEXUALLY TRANSMITTED DISEASES, VIRAL.

### CATEGORY C4

Major changes were made for the LEUKEMIA expansion morphologically, immunologically, and in greater specificity. See the article on the 1989 MeSH Vocabulary File also contained in this issue for details.

### CATEGORY C7

Because MOUTH AND TOOTH DISEASES (NON MESH) was changed to STOMATOGNATHIC DISEASES which includes the jaws, JAW DISEASES was added to this tree while staying also in C5 with the bones.

PHARYNGEAL DISEASES will now appear in this tree as well as in C9 (OTORHINOLARYNGOLOGIC DISEASES).

### CATEGORY C10 & CATEGORY C16

NEUROPATHIES, HEREDITARY SENSORY AND AUTONOMIC (a new name) and NEUROPATHIES, HEREDITARY MOTOR AND SENSORY (a new heading) required retreeing of existent locations in both of these trees.

### CATEGORY D2

BIOGENIC AMINES had to be re-treed because of the creation of BIOGENIC MONOAMINES and BIOGENIC POLYAMINES.

### CATEGORY D14

The new DOPAMINERGIC AGENTS required re-treeing of those chemicals not so named in 1988. About 20 headings now appear there.

### CATEGORY D20

With the creation of ANTI-INFECTIVE AGENTS, QUINOLONE, agents formerly elsewhere now appear here.

### CATEGORY D24

There are new indentions under TUMOR MARKERS, BIOLOGICAL. Also HISTOCOMPATIBILITY ANTIGENS has been re-treed to show the new antigens: HISTOCOMPATIBILITY ANTIGENS CLASS I; HLA-A ANTIGENS; HLA-B ANTIGENS; and HLA-C ANTIGENS.

### CATEGORY E4

MASTECTOMY has merely been expanded to show the six new types of mastectomy for 1989.

### CATEGORY E5 & CATEGORY G3

Although only five new epidemiologic terms were added, one Non-MeSH and four MeSH, a wholesale rearrangement of both these trees was made. Remember that the epidemiology terms - new and old - will be an exception to the rule of indexing only what is discussed. For most of the terms in these trees, the mere mention in the article that a given epidemiological study method was used, requires that the heading be indexed, usually "NIM" (not for *Index Medicus* or without an \*).

## The Basics of Searching MEDLINE

The training workbook *The Basics of Searching MEDLINE*, which is used in conjunction with the NLM health professional training program, was first released in 1985. The revised *Basics of Searching MEDLINE* can be ordered from the National Technical Information Service. The order number is PB89-146179/GBB and the cost is \$20.50 per copy. The expected delivery date is March 1989. The following describes some of the major changes you can expect to find with the new edition.

Effective December 1988, the training database INTROMED<sup>®</sup> was discontinued on the NLM system. This database had been designed to be used with the *Basics* manual to provide a small subset of MEDLINE citations against which all of the search exercises could be performed. INTROMED contained approximately 20,000 records from the 1982 and 1983 publication years. Response from trainers using this database indicated that this number was too low to be able to perform a number of various online search techniques and strategies effectively. Combining several search terms with the Boolean operator AND generally resulted in a No Postings message. With this in mind and based on recommendations from regional and local trainers, the revised edition of the *Basics* now uses MEDLINE as its point of reference. All of the searches in the *Basics* have been performed in the MEDLINE database effective with the 1989 indexing changes. As a result, the numbers will change as the database is updated; however, using current MEDLINE will

provide the searcher with a more accurate representation of the database content.

The new *Basics* also incorporates many system changes which have occurred in the past several years. These include the NEIGHBOR and SELECT commands, new system messages (e.g., COMMENT/DISPLAY commands, etc.), revised login procedures and terminal identifiers for TELENET and TYMNET, etc. It also includes additional information about the user-friendly program GRATEFUL MED. All MeSH headings, subheadings, and pre-explosion names are current for 1989 MeSH.

Included with each copy of the *Basics* manual is a request form to obtain a training code and password for use while practicing searches in MEDLINE online (see form in Appendix). Formerly, when the INTROMED database was used for practice, charges were billed at half the rate of MEDLINE. With this revision and the discontinuation of INTROMED, the intent is still to provide an economical basis for training. Therefore, special non-billed training codes will be assigned by MEDLARS Management upon request from trainers or searchers using the manual. Specific dates must be indicated on the request form before a code can be assigned. Trainers teaching the *Basics* should continue to send in completed "Profile of Participants" forms (see Appendix) at the conclusion of their training class. One form should be completed for each participant. We would also like a participant's form completed by searchers who use the non-billed training codes.

## NLM Student Code Program

The National Library of Medicine (NLM) Student Code Program is designed to encourage the use of MEDLARS databases by students. While our previous "educational codes" program only allowed institutions to apply, this student code program also accepts applications from individual students. The major benefit of the student codes is reduced rates for MEDLARS computer system usage (about half of regular charges). Individual student codes are automatically converted to regular billed codes at the end of two years.

Individuals eligible for system access codes include those enrolled in undergraduate, graduate, residency, and fellowship programs. The particular discipline of study is not important. Educational institutions, including teaching hospitals, medical schools, and medical libraries, providing educational programs are examples of institutions obtaining student codes. Instructors can also apply for student codes to help

prepare and teach courses that involve online searching by students. These codes are renewable every year and each may also be limited or "capped" to a certain amount of system usage semi-annually. Some institutions need to put a limit on the number of hours a code can be used for budgetary purposes. Effective January 1, 1989, institutional student codes were expanded beyond ELHILL databases (MEDLINE, CATLINE<sup>®</sup>, CANCERLIT, AIDSLINE, etc.) to include access to the TOXNET<sup>®</sup> databanks, the MEDLEARN<sup>®</sup> CAI program, and PDQ<sup>®</sup>.

The NLM student code program is highly successful. Over 670 individual and 3,200 institutional student codes have been activated since the beginning of the program in October 1987.

If you have any questions, or wish to receive a student code application, please call the MEDLARS Management Service Desk toll-free at 800/638-8480 or, in Maryland, 301/496-6193.

## Survey of Individual Users of MEDLINE on the NLM System

In the latter part of 1987, NLM conducted a mail survey of the entire population of individual users of MEDLINE with codes for the NLM system as of July 1987. Questionnaires were mailed to 4,311 individuals early in October and returns were accepted until December 1987. Over 70% of the questionnaires were returned, and the usable return rate was 68% (2,716 responses).

The survey was prompted by several recent developments in NLM's online services. As more and more health professionals began to have access to personal computers, NLM took steps to encourage individuals to search NLM's databases directly. These steps include the provision of special short training courses in online searching and the development of GRATEFUL MED, a user-friendly interface to the NLM system.

As the population of individual users grew, NLM wanted to know more about these individuals, their information needs, and their level of satisfaction with MEDLINE as available on the NLM system. An NLM Study Team was convened, and this group, with the assistance of a contractor, Market Dynamics, Inc., developed a questionnaire that was designed to obtain the needed information. The survey was an initial attempt at determining the demographic characteristics of individual users of MEDLINE, their methods of access to the system, their reasons for searching, and their level of satisfaction with current system features and capabilities. A great deal of information has been gathered and will be used to identify system improvements that can provide a better level of information service to U.S. health professionals.

The survey data are now being made available as an NTIS Technical Report (PB89-133722/GBB; U.S. price \$21.95; foreign \$43.90, with a \$3.00 handling charge per U.S. order; \$4.00 for foreign orders). In addition, NLM plans to publish an article detailing the results.

NLM wishes to thank the many individuals who responded to the survey questionnaire.

A summary of the key points of the survey follows.

### KEY POINTS

1. Nearly two-thirds of respondents identified themselves as physicians (65.5%) and more than a quarter (27.7%) as scientists.

-- Respondents were instructed to circle all professions that applied; 10.5% indicated that they were both physicians and scientists.

2. The majority of individual users of MEDLINE appear to be relatively young.

-- The majority received their highest degree within the past 18 years:

-40.1% during the 1970's

-27.1% during the 1980's

3. More than two-thirds of respondents (68.6%) indicated they do all searches themselves.

-- On an average, they perform 4.3 searches/month by themselves.

4. Lack of time was the most frequent reason given for having someone else perform MEDLINE searches (by 59.3% of those who have others search for them)

5. The two main reasons given for performing their own searches were:

-- greater familiarity with subject matter (47.9%)

-- ability to get search results faster (32.2%)

6. Among all reasons selected (regardless of rank assigned), two-thirds of the respondents (65.5%) indicated enjoyment of searching as a factor.

7. The majority of respondents have had their codes for two years or less (90.1%). The majority of the respondents also do not share their code with anyone else (82%).

8. The majority of respondents (84.5%) feel they are somewhat experienced or not very experienced in the use of online databases.

9. For over half of all respondents (57.7%), online usage has remained about the same since receiving their access codes.

-- 30% indicated usage has increased

-- 12.3% indicated usage has decreased

10. Cost seems not to be of overwhelming importance in individuals use' of MEDLINE. The majority (67.7%) indicated that cost considerations rarely (26.6%) or never (41.0%) keep them from performing a search.

11. The overwhelming majority (96.0%) say they most often search for a subject. 81.7% indicated they typically search to satisfy an immediate information need.

12. Those whose primary use of MEDLINE search information is in research/testing are more likely to want all relevant citations (61.7%) compared to those whose primary use of MEDLINE search information is in education (53.3%) or patient care (49.8%).

13. Those in group and private/solo practice are somewhat more likely to feel that less than half of the citations they typically retrieve are relevant. (63.4% of those in group practice and 61.1% of those in private/solo practice compared to 58.6% of all respondents).

14. Almost two-thirds of all respondents (60.8%) indicated MEDLINE citations are acceptable in their current form (i.e., answered "NO" to additional information needed in a citation).

-- Of the 39.2% who said additional types of information would be valuable, full text was overwhelmingly chosen as the single most valuable piece of information not presently available in MEDLINE citations.

15. Eighty percent of respondents expressed an overall satisfaction with MEDLINE.

16. Two-thirds of the respondents (64.1%) took less than 10 minutes on a typical search.

-- Majority of respondents (83.4%) feel that length of time to conduct a search on MEDLINE is reasonable.

17. Of the group of individuals who indicated research/testing as one of their uses of MEDLINE information, 61.5% ranked it as their most common use. Of those who indicated patient care, 52.8% ranked it as the most common use.

18. A somewhat larger portion of the physician group (30.1%) always use GRATEFUL MED form screens as compared to the other professional groups (other health professional 24.8%, scientist 21%, nurse 18.5% and student 17.1%).

-- One-third of respondents in private/solo group practice always use GRATEFUL MED form screens to search.

## AIDS Bibliography to Become a Monthly

The National Library of Medicine has been producing a bibliographic series on AIDS on a quarterly basis since 1983, first as part of the Literature Search Series and then as the separate *AIDS Bibliography* beginning in 1988. Because the volume of literature on AIDS in MEDLINE alone is growing at the rate of over 500 citations per month, the Library has decided to begin publishing the *AIDS Bibliography* on a monthly basis with vol. 2, no. 1, in January 1989.

Initially, the bibliography will continue the current practice of including references from NLM's AIDSLINE (MEDLINE citations on AIDS), CATLINE, and AVLINE<sup>®</sup> databases. In 1989 AIDSLINE will be expanded to include citations from two other NLM databases, Health Planning & Administration and CANCERLIT. The increased coverage will be reflected

in the *AIDS Bibliography*.

The *AIDS Bibliography* contains citations to all preclinical, epidemiologic, diagnostic, and prevention areas added to NLM's AIDSLINE, CATLINE, and AVLINE databases in a given month. Arrangement of the bibliography is by publication type. Journal article citations (no abstracts are included) are printed alphabetically by MeSH heading, similar to *Abridged Index Medicus*. Monographs and audiovisuals, arranged alphabetically by main entry, follow. The bibliography now includes an author index to the journal citations.

The *AIDS Bibliography* may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 (GPO List ID: AID89) for an annual subscription price of \$43.00. Individual issues may be ordered at \$4.00 per copy. International customers should add 25% to the subscriptions price.

## BIOETHICSLINE® Update

As of the end of 1988, the BIOETHICSLINE (short name: BIOETHICS) file contained 26,399 citations to journal articles, books, legal documents, and other publications concerned with ethical and related legal and public policy issues in health care and biomedical research. The file is updated bimonthly, usually during the second week of the month, in February, April, June, August, October, and December.

### NEW KEYWORDS

Four new Keywords have been added to the *Bioethics Thesaurus*, the controlled vocabulary of terms used to index and search BIOETHICS. They are:

#### ANENCEPHALY

- (1988; was BRAIN PATHOLOGY and NEURAL TUBE DEFECTS;  
MeSH map = same)
- SN Congenital absence of all or a major part of the brain
- BT Brain pathology  
Neural tube defects

#### CESAREAN SECTION

- (1988; was CHILDBIRTH and SURGERY;  
MeSH map = same)
- SN Extraction of the fetus by means of a surgical incision of the abdomen and uterus
- BT Childbirth  
Surgery

#### HIV SEROPOSITIVITY

- (1988; MeSH map = same)
- SN Development of neutralizing antibodies in persons who have been exposed to the human immunodeficiency virus (HIV/HTLV-III/LAV); linked to development of the acquired immunodeficiency syndrome (AIDS) and AIDS-related complex (ARC)
- BT Acquired immunodeficiency syndrome

#### QUARANTINE

(1988; was MANDATORY PROGRAMS and (COMMUNICABLE DISEASES or PUBLIC HEALTH or name of a particular disease);

- MeSH map = same)
- SN Limitation of the freedom of movement of persons who have been exposed to a communicable disease (and, loosely, of patients and infected persons), for the purpose of preventing the spread of disease.
- BT Mandatory programs
- RT Communicable disease  
Public health

### NEW PUBLICATIONS

Volume 14 of the *Bibliography of Bioethics*, the print version of BIOETHICS, was published in November 1988. The largest volume to date in the annual series, Volume 14 contains 579 pages and 2,400 citations, many with abstracts. It is available for \$35 from the *Bibliography of Bioethics*, Kennedy Institute of Bioethics, Georgetown University, Washington, DC 20057.

The current edition of the *Bioethics Thesaurus* (1988; 45 pages) is included in Volume 14 of the *Bibliography*. It can also be purchased separately, for \$5, (U.S. and non-U.S.) from the Kennedy Institute of Ethics (address as above). (Prices include shipping and handling for prepaid orders; add \$2 per order if payment is not enclosed.)

### PHONE NUMBERS

Questions about the content of the BIOETHICS file or about subject searching strategies should be addressed to Joy Kahn, Cecily Orr, or Frances Abramson of the Bioethics Information Retrieval Project, which is responsible for producing the BIOETHICS file. They can be contacted via the National Reference Center for Bioethics Literature, which is based at the Kennedy Center for Bioethics. The National Reference Center's telephone number is: (202) 687-3885. Its toll-free number, for inquiries from the continental United States outside the District of Columbia, is (800) MED-ETHX.

The Document Delivery Service for the BIOETHICS database can be reached by calling either its toll-free number, (800) MED-ETHX, or its regular phone number: (202) 687-6738.

SEARCH STRATEGIES

The following search strategies are suggested for

retrieving citations on topics of growing interest in the field of bioethics. During the past year, there has been a marked increase in the literature on these subjects.

A. To retrieve citations on issues involving anencephaly:

- 1 (KW) ANENCEPHALY or ALL ANENCEPHAL: (TW)
- 2 (KW) \*BRAIN PATHOLOGY and \*NEURAL TUBE DEFECTS
- 3 (KW) \*FETUSES or \*NEWBORNS
- 4 2 and 3
- 5 1 or 4

B. To retrieve citations on the right of pregnant women to refuse Cesarean sections:

- 1 (KW) \*PREGNANT WOMEN and \*TREATMENT REFUSAL
- 2 (KW) CESAREAN SECTION or ALL C:ESAREAN (TW)
- 3 (KW) CHILDBIRTH AND SURGERY
- 4 2 or 3
- 5 1 and 4

To retrieve citations on the broader subject of maternal versus fetal rights, other than in the abortion context:

- 1 (KW) \*FETUSES and \*PREGNANT WOMEN
- 2 (KW) ALCOHOL ABUSE or \*BRAIN DEATH or CESAREAN SECTION or CHILDBIRTH or DRUG ABUSE or FETAL THERAPY or MOTHER FETUS RELATIONSHIP or PRENATAL INJURIES or \*TREATMENT REFUSAL or ALL C:ESAREAN (TW)
- 3 1 and 2

C. To retrieve citations on the use of mandatory public health measures, such as quarantine, to control the spread of AIDS or other communicable diseases:

- 1 (KW) \*ACQUIRED IMMUNODEFICIENCY SYNDROME or \*COMMUNICABLE DISEASES or \*HIV SEROPOSITIVITY or \*PUBLIC HEALTH
- 2 (KW) \*MANDATORY PROGRAMS or QUARANTINE or ALL QUARANTIN: (TW)
- 3 1 and 2

D. To retrieve citations on the use of fetal tissue for research or transplantation:

- 1 (KW) \*ABORTED FETUSES or \*FETUSES
- 2 (KW) \*HUMAN EXPERIMENTATION or \*ORGAN DONATION or \*ORGAN DONORS or \*ORGAN TRANSPLANTATION or \*TRANSPLANTATION
- 3 1 and 2

## National Cancer Institute Update

### PDQ

This spring NCI plans to add searching by exclusion criteria (Choice 10 on the Protocol file menu, currently inactive). Exclusion criteria are search criteria which exclude protocols from the current search, improving the precision of the retrieval.

An example of an exclusion criterion is the following: Find all protocols for breast cancer involving the use of the drug MTX, in patients who have had no prior chemotherapy. "Prior chemotherapy" is the exclusion criterion, while "MTX" and "breast cancer" are normal criteria. This is equivalent to the hypothetical ELHILL search statement: "Breast neoplasms and methotrexate and not prior chemotherapy", although "prior chemotherapy" is not a MeSH heading.

Choosing option 10, "Exclusion Criteria", will retrieve another menu which will allow you to exclude protocols by drug, drug combination, treatment modality, phase of protocol, disease parameters, prior therapy, performance status, and pregnancy. Many of the choices from these menus will lead to submenus. For example, "disease parameters" will lead to "metastatic disease present", "no measurable disease present", and "unresectable disease present". A choice of "metastatic disease present" leads to another submenu - "metastatic disease to the brain," "metastatic disease to the liver," "metastatic disease to the bone marrow," "malignant pleural effusion," and "malignant ascites".

Information will also be added to the "disease specific criteria" menu option in the Protocol file (choice 11 on the menu). For example, disease specific criteria for breast cancer include stage, menopausal status,

hormone receptor status and lymph node status. This will permit very narrow and specific retrieval but may lack comprehensiveness.

The PDQ ACCESS software that interfaces stored CANCERLIT searches with PDQ will be enhanced to include author searching in CANCERLIT. Also, there are plans to produce a Macintosh version of PDQ ACCESS (currently limited to IBM and compatibles) by Summer 1989.

Additional commands will be phased in to permit bypassing more menus. For example drug searching in the Protocol file now requires selecting item 2 on the menu (drug) then typing in a drug name: 2;methotrexate. It will become possible to type: drug;methotrexate. A user at the PDQ main menu currently has to type: 7;1;2;methotrexate. It will become possible to type: prot;drug;methotrexate. These new commands should make command stacking easier to use.

### CANCERLIT

In December 1988, the search default for the CANCERLIT database was changed from text word (TW) to MeSH heading (MH). This has made searching CANCERLIT nearly identical with searching MEDLINE. The NCI decided to make this change because most MEDLARS searchers are more comfortable with the MEDLINE approach, and now over 70% of the CANCERLIT file (all entries since 1980) is indexed with MeSH. Approximately 450,000 CANCERLIT records now have MeSH terms. Many searchers of CANCERLIT already use only MeSH terms in their strategy, and therefore are only searching the MeSH-indexed portion of the database. For more information, see the *NLM Technical Bulletin*, October 1988.

## CHEMLINE<sup>®</sup> Update

In 1988, efforts continued to improve access to CHEMLINE by tagging important data, as well as providing links between records in the file of potential relevance to users. The emphasis continues to be on making CHEMLINE an easy to use biomedical/regulatory chemical directory serving all MEDLARS databases.

A unique aspect of CHEMLINE is that many substance names are tagged with acronyms in square brackets showing that they are "official" names from various national or international compendia of drugs or pesticides. These tags allow a user to pick an appropriate generic name rather than a brand name, for purposes such as publication and labelling, as well as to carry forward for further searching. Following are some examples:

### Diazepam [USAN:INN]

The tag for this name shows that it is a United States Adopted Name (USAN), as well as an International Nonproprietary Name (INN). "Diazepam" will give more retrieval in searching literature files than the substance's more commonly known trade name of "Valium". The following name:

### Mequitazine [INN:BAN:DCF]

is a British Approved Name (BAN) and French Approved Name (DCF), in addition to being an INN. The next pesticide name:

### Diflubenzuron [ANSI:BSI:ISO]

is the official name for this pesticide according to the American National Standards Institute (ANSI), the British Standards Institution (BSI), and the International Organization for Standardization (ISO).

Because users are often faced with a variety of synonyms for a substance, tags such as these can be extremely effective as a guide to choosing the most useful designation. Users of CHEMLINE should become accustomed to looking for one or more of these tags appended to names within a retrieved record, since they are truly "value-added" information.

Another unique feature of CHEMLINE is the machine-generated Related Registry Number (RR) field. It is used to link the records of certain salts and hydrates for the convenience of searchers. For 1988, the label "(Parent)" is now appended to the Registry Number in the RR field pointing to the record among a set of Related Numbers which is NOT a salt or hydrate. For instance in the record retrieved for the drug "Duricef," the RN and RR fields show:

RN - 66592-87-8  
RR - 42284-83-3 (NA)  
RR - 50370-12-2 (Parent)

If the user retrieved the "Parent" record using the RN of 50370-12-2, it will lead to CHEMLINE Locators pointing to additional MEDLINE and RTECS data not seen in the Duricef record. Using this parent RN will give about 50% more citations in the TOXLIT file as compared to the RN of Duricef. It is an additional step in searching that is usually well worth taking.

The regeneration of CHEMLINE for 1989 is scheduled for April. In this regeneration, the many locator changes caused by changes in the MEDLINE files, the split of TOXLINE/TOXLIT, and the advent of the AIDSLINE file will be reflected. Efforts will continue to enhance the file with international data of biomedical interest, and thus to improve the retrieval capabilities of searchers with chemically-oriented questions.

## HEALTH PLANNING & ADMINISTRATION

### DATABASE UPDATE

At the close of 1988, the Health Planning & Administration database (HEALTH), produced cooperatively by the National Library of Medicine and the American Hospital Association (AHA) Resource Center, contained 434,888 citations to worldwide literature concerned with all aspects of health care delivery. The file is updated monthly, one week following the MEDLINE update usually at the beginning of each month.

### NEW VOCABULARY

Several of the 1989 Medical Subject Headings are particularly relevant for searching HEALTH:

HEALTH CARE RATIONING  
 HOSPITAL-PATIENT RELATIONS  
 HOTLINES  
 INSURANCE POOLS  
 INSURANCE SELECTION BIAS  
 INTENSIVE CARE UNITS, PEDIATRIC  
 MEDICARE ASSIGNMENT  
 NURSING ADMINISTRATION RESEARCH  
 NURSING EVALUATION RESEARCH  
 ORGANIZATIONAL CULTURE  
 PHYSICIAN PAYMENT REVIEW COMMISSION  
 PROGRAM EVALUATION

Also, the addition of more regions and cities within the United States is especially significant for searching HEALTH, as is the new subheading, /statistics & numerical data.

### DOCUMENT COVERAGE

Each issue of the *NLM Technical Bulletin* contains a 'Serials Update' section that lists title changes, drops, and additions for indexed journals. Special List Health journal titles are preceded by 'HLI'. These journal titles are also listed in the NLM publication, *List of Serials Indexed for Online Users*. In addition, occasional issues of *Hospital Literature Index* contain inserts that list new, changed, and dropped Special List Health titles for specific time periods along with publisher, publisher's address, frequency, and volume, number, and date of issue in which indexing begins or ends. Since October 1987, Special List Health updates include 8 new titles, 14 title changes, 1 title change from H (LI) to N (LI), i.e.:

Special List Health status change to Special List Nursing Status, and 33 titles dropped from indexing or ceased publication.

### PRODUCTS

The *Hospital Literature Index*, produced from HEALTH and published quarterly by the AHA Resource Center, completed its 44th consecutive year of publication in 1988. In addition to Subject, Name, and Journal sections derived from HEALTH, each issue also lists the books, audiovisuals, theses, and new journals acquired by the Resource Center, grouped by Medical Subject Headings. The last issue for 1988, Volume 44, contains 14,184 citations, and is a hardbound annual cumulation that includes citations for the fourth quarter. A 1989 subscription is available for \$160 for AHA members and \$200 for non-members.

The revised brochure on HEALTH, developed by the AHA Resource Center, is still available from AHA. Ten folded pages in length, it is available in lots of 50 to AHA members for \$8.00 and to non-members for \$12.00. The brochure is ideal for use as a library services orientation tool.

The AHA Resource Center offers a half-day seminar on searching the HEALTH database. The course can be taught at local sites, with or without online demonstrations. It has been approved for 3.2 contact hours of MLA CE credit. For additional information on this seminar or products mentioned above, write to the AHA Resource Center, 840 North Lake Shore Drive, Chicago, IL 60611, or call the Center at 312/280-6263.

HEALTH searching using a user-friendly INPUT FORM SCREEN became available on Version 3.0 of GRATEFUL MED, at the end of 1987.

### CHANGES IN SEARCH/PRINT CAPABILITIES IN 1988

- The Number of References (RF) field was added to HEALTH standard print formats. However, only articles indexed with the check tag REVIEW include the number of references.
- The Address (AD) field was added to HEALTH citations to articles from substantial MEDLINE-derived *Index Medicus* journals.
- A new value was added to the Journal Subset (SB) field in HEALTH, N (SB). This tag defines all nursing journals, whether or not the journal has *Index Medicus* status or Special List status. For 1989, the

corresponding Journal Subset (SB) field was also added for dentistry to the HEALTH file citations. D (SB)

identifies all dental journals, whether or not *Index Medicus*.

## TOXLINE<sup>®</sup> Regeneration Status

Reconfiguration of the TOXLINE family of databases is underway at NLM, with public release of the new files currently planned for late February 1989. At that time, we will offer a regenerated TOXLINE file in order to provide Class Maintained (1989) MeSH on the Toxicity Bibliography (TOXBIB) portion of TOXLINE. Also, the TOXLINE file will be divided into a front and back file. The front file will continue to be known as TOXLINE, and will cover publication years 1981 forward. The new backfile will be known as TOXLINE65, and will cover publication years 1980 and earlier.

In addition, NLM has decided to return to the practice of including bibliographic information in toxicology from the BioSciences Information Service (i.e., the Toxicological Aspects of Environmental Health subfile, known as the BIOSIS subfile) and from the American Society of Hospital Pharmacists (the International Pharmaceutical Abstracts subfile, with the subfile acronym IPA) in the TOXLINE and TOXLINE65 databases. At present these subfiles are contained in the TOXLIT and TOXLIT65 databases. This transfer is possible because NLM has negotiated licenses with the suppliers of these proprietary files that allow payment of flat fees by NLM for all online use of their data in the TOXLINE files without any additional royalty charges based on usage. This means that the charge to users for accessing the new TOXLINE and TOXLINE65 files will be the same as that for searching MEDLINE and most other MEDLARS files.

Thus, beginning approximately March 1, 1989, the newly reconfigured TOXLINE files will include all the current

subfiles in the collection of toxicologic bibliographic information except the subfile from Chemical Abstracts Service (CAS). This subfile, known as Chemical-Biological Activities (CA), will constitute the entire content of the TOXLIT and TOXLIT65 files. The 1989 prices for the TOXLIT files, which will continue to have royalty fees included in their use charges, were announced in the January 1989 *NLM Technical Bulletin*. Prices also were posted in the NLM Online News at the time the files were made public. The list of TOXLINE subfiles shown in Table I reflects the changes in the upcoming regeneration.

Other new features to look for in the regenerated TOXLINE files are:

The BIOSIS subfile records will now contain the Biosystematic Codes and Concept Codes from BIOSIS in the TOXLINE keyword (KW) field. See the February issue of the *NLM Technical Bulletin* for a detailed article on this.

The TSCATS subfile will be reloaded in order to make the EPA submission numbers searchable. These numbers will appear in the Classification Code (CC) data field.

Contrary to what was projected in the September 1988 *NLM Technical Bulletin*, the MEDLINE assigned molecular sequence data bank accession numbers will be reported in TOXLINE's ID Number (ID) data field. The Secondary Source ID (SI), which serves as the unique identifier for records in TOXLINE, will continue to have only a single occurrence per record.

The CRISP subfile (Toxicology Research Projects) will be replaced during the regeneration with a new version of this subfile that will contain Public Health Service toxicology research projects for fiscal years 1986, 1987, and 1988.

## SERLINE Update

The following represents the major changes in the SERLINE database:

### PRESERVATION MICROFILMING RECORDS ADDED

In the Fall of 1986, NLM awarded a four-year contract to microfilm 35 million pages of brittle monographs and serials. This effort is a major part of the initiative NLM has undertaken to preserve the biomedical literature. The first phase of the project entails microfilming serial titles. In April 1988, NLM began recording in SERLINE all serial titles microfilmed and planned for microfilming under the current contract. By making this information available, NLM hopes to prevent other research libraries from duplicating NLM's efforts in their preservation microfilming projects.

NLM staff test serials for brittleness and refer brittle volumes to the microfilmer on an ongoing basis. As brittle volumes are identified, they are "queued" for microfilming. "Queuing" means scheduling titles for inclusion in the microfilming project. While NLM intends to microfilm the volumes in the order that they have been added to the queue, titles will not be microfilmed immediately if the runs are incomplete. To obtain complete runs of titles, NLM borrows from other libraries volumes and issues that are missing from its collection, and incorporates the borrowed pieces into the microfilming process.

Data that indicate the volume and years queued for microfilming and the date a title was added to the queue are now a part of the existing serial record in SERLINE.

After a title has been microfilmed, the SERLINE record will be updated to reflect the addition of archival microfilm to the Library's holdings. The microfilmed holdings data consist of volumes and years microfilmed, the date of completion, and the date of any major changes to the holdings record. These new fields have also been added to SERLINE. (See the *NLM Technical Bulletin*, March 1988, for a complete description of each field).

After a serial title is determined to be brittle, it should always be searched in SERLINE before a decision is made to microfilm it. While most often SERLINE will be used to determine if NLM has microfilmed or plans to microfilm a particular title, there are several ways to use SERLINE to locate microfilming data.

Microfilming data will only be displayed in the PRINT DETAILED or the new PRINT FILM or PRT FI commands. PRT FILM includes the following data elements: TI, FL, PL, PU, GN, QDA, QV, QY, FDA, FMR, FV, FY, FNO, UI.

Figure 1 contains a sample SERLINE record printed using the PRINT FILM command. Please note the Film Date of Entry (FDA) and Film Revision Date (FMR) fields.

### FIRST/LAST ISSUE (FL) FIELD ADDED TO PRINT INDEX (PRT ID) COMMAND

The First/Last Issue (FL) field now appears when the Print Index (PRT ID) command is used. The FL contains the date and volume of the first issue published for open serials and of the first and the last issues for serials which have ceased publication or have been continued or superseded by another title.

### INDEXING INFORMATION (II) FIELD

Indexing history notes have been added for approximately 1,000 Special List (Nursing, Dental, HEALTH and POPLINE) titles. The notes indicate the first and/or last issue indexed for MEDLINE, the Backfiles, HEALTH and POPLINE.

### NEW LIST OF JOURNALS INDEXED SUBJECT HEADINGS (JD) VALUES

Two new headings used to group titles in the subject section of the *List of Journals Indexed in Index Medicus* have been added: Acquired Immunodeficiency Syndrome and Biotechnology. These headings are directly searchable in SERLINE using the qualifier (JD).

### SUBSET (SB) TAG FOR DENTISTRY

A new value of D in the SB field has been added to tag all Dental titles currently or previously indexed for MEDLINE or HEALTH. This subset can be used to limit searches to all "dental" journals in MEDLINE, the Backfiles, AIDSLINE, and HEALTH.

### TITLE ABBREVIATIONS (TA)

A number of title abbreviations (TA's) were changed in order to conform with the American National Standard for Information Sciences - Abbreviation of Titles of Publications (ANSI Z39.5-1985). Most of the changes involved adding a space between the abbreviation of

two-word place names, e.g., NJ to N J (for New Jersey) and deleting the brackets from the TA when word for supplement is part of the title proper, e.g., Acta Physiologica Scand [Suppl] to Acta Physiologica Scand Suppl.

The changes in abbreviations will be reflected in the

1989 editions of the *List of Journals Indexed in Index Medicus (LJI)* and the *List of Serials Indexed for Online Users (LSIOU)*. In addition, the citations affected in MEDLINE and the Backfiles were maintained during 1988 Year-End processing.

TI - BRITISH MEDICAL JOURNAL

Figure 1

## TOXNET Update

In 1988, the TOXNET system experienced continued growth in usage. Improved search software, the introduction of RTECS, and a greater awareness of the system's capabilities, have contributed to its popularity.

Several search system software enhancements implemented in 1988 are particularly noteworthy. A more sophisticated version of the TOXNET gateway permits users to switch to the PDQ file in addition to files on the ELHILL system. Also built into the Gateway is a simplified logoff procedure, allowing users to exit from NLM completely while in ELHILL and not requiring a return to TOXNET. Eight additional telecommunication ports allow access to more simultaneous users.

HSDB's new Review Status Tags permit users to more precisely identify the degree of peer review of HSDB data statements. The Tags are: Peer Reviewed, QC Reviewed, and Unreviewed. Figure 1 contains an example of an HSDB<sup>®</sup> citation that contains the "Peer Reviewed" tag.

Internal TOXNET software features facilitate staff entry of EXPRESS data culled from current literature, thus keeping the file current. A cooperative project with MICROMEDEX, Inc. will result in HSDB's augmentation with medical treatment data from that firm's POISINDEX database. HSDB has been applied to a number of chemical emergency response situations and even used in a simulation exercise by the Maryland Institute for Emergency Medical Services System.

RTECS<sup>®</sup> (Registry of Toxic Effects of Chemical Substances), produced and maintained by the National Institute for Occupational Safety and Health, became available for TOXNET searching in December 1987. Its newly structured unit record permits more precise searching than the version previously on ELHILL. NLM has continued to enrich the RTECS file with Chemical Abstracts Service (CAS) Registry Numbers. This project has resulted in approximately 20,000 enhanced RTECS records. RTECS now contains over 95,000 records.

The CCRIS (Chemical Carcinogenesis Research Information System) on TOXNET has been widely appreciated within the cancer research community. Several significant improvements have taken place in the past year. These include making the extensive references fully searchable and creating more online explanations for the CCRIS controlled vocabulary.

Among the most exciting developments which took place in 1988 and are ongoing, is the work on developing a new array of files to be phased into TOXNET over the next year. The Chemical Directory File (CDF) will be an online chemical dictionary and locator file. Its records will consist largely of identifying data such as chemical synonyms and CAS Registry Numbers. Records will also contain "locators," indicating both other TOXNET files containing data on the chemicals plus regulatory lists on which the chemicals may appear. The Oak Ridge National Laboratory's EMIC (Environmental Mutagenesis Information Center) and ETIC (Environmental Teratology Information Center) will be TOXNET's first foray into the world of bibliographic files. ETICBACK, a bibliographic database which includes references to articles on birth defects and reproductive and developmental toxicology from 1950-1988, became available on TOXNET on January 30, 1989. The Directory of Biotechnology Information Resources (DBIR), a multi-component databank containing information on a wide range of resources related to biotechnology, was mounted on the TOXNET system on January 23, 1989. EPA's TRI (Toxic Chemical Release Inventory), mandated by the Emergency Planning and Community Right-to-Know Act of 1986, part of the Superfund Amendments and Reauthorization Act, is also scheduled for 1989. It will contain data on the environmental releases of any of over 300 hazardous chemicals. Significant usage is expected by scientists, regulators, the health care community, and the general public. Other projected TOXNET files for which Unit Records were being designed in 1988 include EPA's IRIS (Integrated Risk Information System), EPA's GENE-TOX, and a data bank to contain summaries of the Toxicological Profiles prepared by the Agency for Toxic Substances and Disease Registry.

## PC User Aids

The Specialized Information Services Division released new versions for both the Toxicology Information Program Files Demo Disk and CHEMLEARN in 1988. The Demo Disk is an interactive microcomputer-based demonstration of CHEMLINE, TOXLINE, RTECS, HSDB, CCRIS, and DIRLINE files. It is designed to acquaint the new or potential users with the content and search capabilities of these databases. There is a brief description of and sample searches from each database.

CHEMLEARN is a fully comprehensive, interactive microcomputer-based training package for CHEMLINE based on a main-frame CAI program developed at the Library in 1979. CHEMLEARN is designed to teach medical and health professionals, as well as librarians and information scientists, how to effectively use CHEMLINE. It covers the content and use of the data elements as well as effective search strategies. It allows the enables user to learn about the basic aspects of CHEMLINE, such as the retrieval of Registry Numbers and synonyms, while allowing the skilled searcher to learn about the more complex aspects of the database, such as substructure searching. CHEMLEARN may be used in place of formal training, as a precursor to or a refresher following formal training, or for review of a particular concept.

As in the previous version, the new version of CHEMLEARN is organized into seven chapters which are divided into sections and subsections. The introduction is presented in Chapter one. Chapters two, four, and six contain discussions of the data elements in CHEMLINE, followed by multiple choice and/or fill-in-the-blank problems. Chapter two covers the basic data elements used when searching CHEMLINE. The fragmented data elements are covered in Chapter four and the ring data elements in Chapter six. Chapters three, five, and seven provide sample searches which simulate actual online sessions.

Many new features have been added to the new version of CHEMLEARN. They include SUMMARIES for every section, HELPS for every user interaction, a print option for the SUMMARIES, DICTIONARY, and MAP, a and scroll option for the DICTIONARY and MAP.

Both the Demo Disk and CHEMLEARN are currently available from the National Technical Information Service. The Demo Disk sells for \$15 and CHEMLEARN for \$25. (There is a \$3 handling charge per order.) The Product Number for the Demo Disk is PB 88-195805 and for CHEMLEARN is PB 88-218144. Both run on IBM-PC, PC-XT, PC-AT, PS/2 and fully compatible computers. They require 256K RAM memory, one disk drive, and DOS 2.0 or higher. They support most monochrome, color graphics, or enhanced color graphics displays.

The address and phone number for NTIS are:  
National Technical Information Service  
U.S. Department of Commerce  
5285 Port Royal Road  
Springfield, VA 22161  
Phone: (703) 487-4650

Please direct any questions or comments regarding the Demo Disk, CHEMLEARN, or TOXLEARN to:

## Sample Forms

Contained in the remainder of this *Special Issue* are various types of forms frequently requested by online searchers. It is recommended that you make photocopies of any of these that you feel will be used by you or your staff and keep the forms on hand for future use. The following are included:

- 1) NLM ONLINE SERVICES APPLICATION
- 2) NLM AUTOMATIC SDI SERVICE REQUEST FORM
- 3) CHANGE OF ADDRESS FORM
- 4) SUGGESTION FOR MEDICAL SUBJECT HEADINGS CHANGE
- 5) SEARCHING AIDS WITH NTIS ORDER FORM
- 6) REQUEST FOR NLM ONLINE TRAINING & 1989 SCHEDULE
- 7) REQUEST FOR ONLINE TRAINING CODE(S)
- 8) PARTICIPANT'S PROFILE/TRAINING CODE USE

**NLM ONLINE APPLICATION FORM**

I am applying as an:

- Individual
- Institution

PERSONAL NAME:

\_\_\_\_\_

**STUDENTS/SCHOOLS/COLLEGES:**

The National Library of Medicine has a special program at reduced rates for MEDLARS® access for students. If you are: a college or university student; a college/university/educational institution offering online search instruction; or a resident, fellow, or intern and you would like to participate in this program, please call the MEDLARS® Service Desk to request the student code application forms: (800) 638-8480.

INSTITUTION NAME (if applicable):

\_\_\_\_\_

1. Please describe your organization or profession's primary function or major area of service. Be as specific as possible. Include your area of specialty if you are a health professional.
  
2. Please check the *one* administrative classification that best describes you or your organization:
  - a. \_\_\_ Federal Government
  - b. \_\_\_ State/multi-state government or state university
  - c. \_\_\_ County/local government
  - d. \_\_\_ Non-government, not-for-profit or nonprofit
  - e. \_\_\_ Non-government, for-profit or commercial
  - f. \_\_\_ Other. Please specify: \_\_\_\_\_
  
3. Please check this box  if you plan to use NLM's GRATEFUL MED® software to search MEDLARS®.

**FOR NLM USE ONLY:**

Date Received \_\_\_\_\_ User Type \_\_\_\_\_ Telecommunications Type \_\_\_\_\_

**NLM ONLINE BILLING AGREEMENT**

Complete and sign this form, which authorizes the National Technical Information Service (NTIS), the billing agent for MEDLARS®, to bill you for use of NLM's online services. Return with Form A to:

MEDLARS Management Section  
 National Library of Medicine  
 8600 Rockville Pike  
 Bethesda, MD 20894

Include purchase orders or checks for deposit accounts. No advance payment is required if you select the credit card or direct payment option. Future rate changes may be announced; continued use of the services for 90 days after any announced rate change authorizes NTIS to bill at the changed rate. Government users must include a purchase order (PO) with these forms. NOTE: Interest will be charged on any account 60 days overdue. Federal, state, and local government users are exempt from interest charges.

**User Address:**

**Billing Address (if different):**

**I/We elect to pay NTIS for use of the NLM's online services in the manner specified below (check one):**

**Direct Payment:** Payment is due upon receipt of monthly invoices. Make checks payable to NTIS.

**Credit Card:**  Visa  MasterCard  American Express Card # \_\_\_\_\_

Expiration Date: \_\_\_\_/\_\_\_\_/\_\_\_\_ Authorizing Signature \_\_\_\_\_

**Deposit Account:** This type of account requires an advance deposit of funds. The amount deposited should be sufficient to cover 3 month's online usage; a minimum of \$25 is required to open an account. At present, charges for a 1-month period average \$100 for a hospital library and \$20 for a health professional. Users choosing this method will receive a monthly Statement of Account showing the monthly charges deducted from the deposit account balance. It is possible to use an existing deposit account which was established for obtaining other NTIS products or services. Federal users are permitted to use transfer of funds.

**There are no subscription fees or minimum charges associated with MEDLARS® User ID Codes.**

\_\_\_\_\_  
 Signature (required for all applicants)

## MEMORANDUM OF UNDERSTANDING

**You should carefully read the following Memorandum of Understanding. The use of your assigned MEDLARS ® User ID Code for NLM online computer services indicates your acceptance of the following terms, conditions and responsibilities.**

This Agreement between the National Library of Medicine (NLM) and the participating organization or individual is intended to assure a common understanding of the responsibilities of each party.

1. NLM agrees to provide:
  - a. Access to its public online bibliographic databases as determined by NLM.
  - b. Technical data and documentation detailing system usage and modifications, some of which are "for purchase" items.
  - c. Assistance during normal business hours (8:30 a.m. - 5:00 p.m. Eastern Time, Monday-Friday) to resolve operating problems and difficulties.
2. The participating organization or individual agrees to:
  - a. Purchase appropriate documentation materials (e.g., Manuals, etc.).
  - b. Obtain and pay for equipment necessary to access the NLM computers, including telephone installation and rental, and rental or purchase of an appropriate terminal or microcomputer equipment.
  - c. Protect the system from unauthorized use.
  - d. Pay charges assessed by NLM for its online services (including royalty fees charged by database suppliers).
  - e. Indicate clearly, if fees are charged to others for online services, the portion of the fee that is assessed by NLM for services.
3. Rate changes shall become effective 90 days after written notice, except that royalty charge changes for certain NLM databases may be passed on to the participating organization/individual without advance notice. Rate changes will be announced in the NLM Technical Bulletin, a publication that is sent monthly to each user organization/individual.
4. Some material in the NLM databases is from copyrighted publications of the respective copyright claimants. Users of the database are referred to the publication data appearing in the bibliographic citations, as well as to the copyright notices appearing in the original publication, all of which are incorporated by reference.
5. NLM databases shall not be issued for resale, republication, or redistribution in machine-readable or any other format, except as authorized under a signed NLM License Agreement to Lease NLM Databases in Machine-Readable Form.
6. Data obtained by downloading portions of the database (i.e., retrieving portions of a database online for subsequent storage on a personal computer) or as Subsets\* for "personal" use may be retained in machine-readable form by those employing automated technology such as microcomputers.
7. Future revisions of this Memorandum of Understanding will be announced in a special section of the NLM Technical Bulletin.
8. This Agreement is effective for an indefinite period. It may be terminated at any time by either party by a 90-day written notice, or terminated at any time by the user by a 30-day written notice prior to the effective date of a change in rates. Failure of the participating organization or individual to adhere to the terms of this Agreement may result in an immediate termination or suspension of access to NLM's online databases. Online access to the databases by the participating organization or individual shall be severed upon termination of this Agreement in writing by either party.
9. Interest will be charged on any account 60 days overdue. Federal, state and local government users are exempt from interest charges.

\* Subsets policy for portions of databases loaded for local re-use are covered in the NLM License Agreement to Lease NLM Databases in Machine-Readable Form.

OVER

10. NLM represents that data provided under this Agreement were formulated with a reasonable standard of care. Except for this representation, and as otherwise specifically provided in this Agreement, NLM makes no warranties, as to fitness for particular purposes, and will not be liable for consequential or incidental damages, or other claims or demands arising out of the use of MEDLARS®, MEDLINE®, GRATEFUL MED®, or any products, services, or documentation. Users are responsible for claims arising out of third-party use. Further, the National Library of Medicine reserves the right to revise programs, products, or publications and to make changes from time to time in the content without obligation to notify any person of such revisions or changes.

**After NLM processes your application, you will receive:**

- A User ID Code and passwords for accessing the MEDLARS® system. Each code (except student codes) comes with a \$40.00 practice credit, which represents approximately two hours of MEDLINE® online searching.
- System documentation including access procedures, telephone access numbers, equipment settings, pocket cards, and general information about MEDLARS® and NLM.
- The monthly publication, the NLM Technical Bulletin, in which news about the NLM computer systems, databases, and price changes is published.

If you are restricted to ONE-YEAR AGREEMENTS only:

Indicate the month that you want the code to become effective and provide a typed name AND signature below. You must provide NLM with written notice of renewal within 30 days prior to the expiration date for each successive year that you intend to keep the code active.

## "How To" for GRATEFUL MED<sup>®</sup>

Bill Trefzger

MEDLARS Management Section, NLM

The National Library of Medicine has just released a PC-based tutorial for GRATEFUL MED. The program, titled "How To" A Tutorial for GRATEFUL MED, is an easy and enjoyable introduction to GRATEFUL MED and MEDLARS<sup>®</sup> searching. While designed to help get the novice started, "How To" will also be a valuable aid for the experienced user and for those involved with teaching end users how to search with GRATEFUL MED.

"How To" A Tutorial for GRATEFUL MED will be included, at no additional charge, with all new GRATEFUL MED orders. Users who have already purchased GRATEFUL MED can also obtain a copy free of charge. See the end of this article for ordering information.

"How To" presents information to the GRATEFUL MED user in a friendly, informal way, assuming little or no online searching or microcomputer experience. The program is organized into eight chapters, and several sub-chapters and help sections. This format allows more advanced users to select the specific areas in which they may need more assistance. There is also a detailed index, which will help users get to the exact screen they need.

## Technical Notes

Whenever applicable, the heading of each Technical Note includes a reference to the section of the Online Services Reference Manual, 1988 that is considered most relevant to the item being discussed, e.g., (Manual 4.7.2). Users should keep in mind that the item may pertain to other sections as well.

### NLM & PDQ® ONLINE USERS' MEETINGS

The NLM Online Users' Meeting will be held on Monday, May 22 from 12:30 to 1:30 p.m. at the Annual Meeting of the Medical Library Association in Boston. The meeting will be held in the Grand Ballroom of the Boston Marriott Copley Plaza Hotel. Users will be updated on MEDLARS and DOCLINE developments. The PDQ User Group Meeting will be held on May 23 from 7:30 am - 8:45 am in the Grand Ballroom of the Boston Marriott Copley Plaza.

### SERLINE® SCI (AI) TAG REMOVED (Manual 11.3.2)

Due to a shortage of resources necessary to keep the Abstracting and Indexing tag (AI) for *Science Citation Index* (SCI) current, the value of SCI will no longer appear in the AI tag for any titles in the SERLINE database effective with the April 1989 update.

### NEW DIRLINE® SUBFILE; & OTHER CHANGES (Manual 19+)

DIRLINE was updated on March 8. The Directory of Biotechnology Information Resources (DBIR) was added as a new subfile, bringing the number of component subfiles in DIRLINE to ten. DBIR is also available as a separate database on TOXNET® (see the February 1989 *NLM Technical Bulletin*).

In addition to the new subfile, several other changes were made. City (CITY) is now a separate searchable field, as is the Acronym (AC). These new fields are not used in every record at this time. The subfile producers will gradually modify their records to incorporate these new data elements. A new print format is also available in DIRLINE. This is PRINT DES (PRINT DESCRIPTION) which prints the following fields: Secondary Source Identifier (SI), Name (NA), Acronym

(AC), Address (AD), Institution Contacts (IC), Telephone Number (TEL), and Abstract (AB).

### CATLINE® PRINT COMMAND (Manual 8.5)

The KW (Keyword) field has been added to the PRINT CATCARD (PRT CC) print format for CATLINE effective March 6. The KW field exists only in retrospective CATLINE records. The KW field contains subject heading combinations in Retrospective CATLINE records which could not be mapped to current MeSH® terms or equivalents. In the PRINT CC format, the field will appear in the tracing area before the CA (Call Number), similar to where the MH field appears.

### CHANGES TO PDQ

PDQ Release 89.1 was implemented on March 10, 1989, with two new features added:

- 1) The ability to retrieve a brief descriptive statement for selected rare tumors. The first statement is for Peripheral Neuroepithelioma, with others following in the coming months. These statements are available as option 5 from the Cancer Information menu.
2. Many users of PDQ like to set PAUSE ON before printing a long listing. In addition to setting this option from the print menus, the commands PAUSE ON and PAUSE OFF have been added to the list of valid PDQ commands. These commands can be entered from the main menu for Organizations, Physicians and Protocols instead of choosing as a menu option. When printing with PAUSE ON, the PAUSE OFF may be entered at the prompt.

### TOXGROUP IN MFSEARCH

As shown in the February 1989 *NLM Technical Bulletin*, TOXLINE65, the new backfile of the TOXLINE® database, has been added to TOXGROUP effective March 13. TOXGROUP is a prespecified group of databases which may be searched using MFSEARCH (multifile searching capability). TOXGROUP now includes TOXLINE, TOXLINE65, TOXLIT, and TOXLIT65. Notice that TOXLINE65 is the second database searched in this group when using MFSEARCH.

**CLASSIFICATION CODES FOR CHEMLINE®  
AVAILABLE**

A listing of Classification Codes used in the CHEMLINE file is available. These codes describe the general category of use of drugs and other chemicals. This listing is available free of charge. It can be requested by contacting:

Specialized Information Services  
8600 Rockville Pike  
Bethesda, MD 20894  
Telephone: (301) 496-1131

**CLINPROT® INDEX TERM LISTING**

The CLINPROT Index Term listing for April 1989 is now available. It may be requested by writing to the National Cancer Institute. Please include a self-addressed label with the request. No return postage is necessary. Please send requests to:

International Cancer Research Data Bank Branch  
National Cancer Institute  
R.A. Bloch Building (82), Room 103  
Bethesda, MD 20892

*Please access **FILE INFORM** and type **NEWS** to see the most recent news items online!*

## New CLINPROT Search Tools: CLINPROT to Merge into PDQ

Jim Carter  
Database Manager, ICRDB, NCI

The National Cancer Institute (NCI) has developed a new set of user tools for CLINPROT. In addition to a listing of CLINPROT subject captions, a new user manual with the following appendices has been printed:

Drug Combination Subject Captions  
Key to Drugs and Short Names Used in Drug  
Combination Subject Captions  
Definition of Drug Combination Acronym Subject  
Captions  
Drug Names & Synonyms - Acronyms - NSC Numbers  
Protocol Sources

To receive a packet of the user tools, please send the request with a self-addressed label to:

International Cancer Research Data Bank Branch  
National Cancer Institute  
R. A. Bloch Building (82), Room 103  
Bethesda, MD 20892

The NCI has decided to discontinue production of the CLINPROT database once its information content and functionality is fully duplicated within PDQ, probably in early 1990. There are several reasons for this decision. First, closed protocols can be of definite value to current

users of PDQ since they represent a body of information as to "what has already been tried." Second, the "one-stop shopping" concept for cancer treatment information is more appealing than consulting two separate databases.

PDQ searchers will appreciate that the PDQ menus are much different than the command line used in CLINPROT. Additionally, while we provide the complete CLINPROT terminology in the search tools (see the Technical Note in this issue), no printed listing of PDQ terminology has been available previously. Text Word searching is available only on the protocol title in PDQ. Offline printing from PDQ is unavailable. During the next nine months, we plan to enhance PDQ in the following ways:

1. Provide printed search tools and terminology listings similar to the ones we currently provide for CLINPROT.
2. Enable an offline print capability.

We believe that these features must be available in PDQ prior to terminating the CLINPROT file. We plan to develop a command line interface to allow Boolean searching in PDQ; however this will not be available initially.

Since these changes will affect our CLINPROT users in a major way, we are giving as much notice as possible. NCI would be pleased to receive any comments or suggestions in written form. Send them to the address listed below. Thank you for your help.

"How To"

Continued from page 1.

After invoking the program, the user is presented with a whimsical graphic image of the NLM, and is asked "Have you used this tutorial before?" If "No," the user receives a quick "tutorial" in using the tutorial before moving to the "How To" Main Menu, which is presented here in Figure 1.

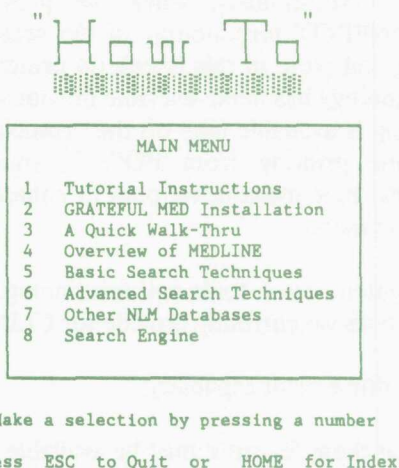

Figure 1

This screen is the "Table of Contents" for "How To." From here users can select the chapter that interests them, or go through them all in sequence. Each chapter contains detailed information on its subject. Most new users, after installing GRATEFUL MED, will find Chapter 3 "A Quick Walk-Thru," Chapter 4 "Overview of MEDLINE," and Chapter 5 "Basic Search Techniques" to be the most helpful in learning how to use GRATEFUL MED to find the information they need.

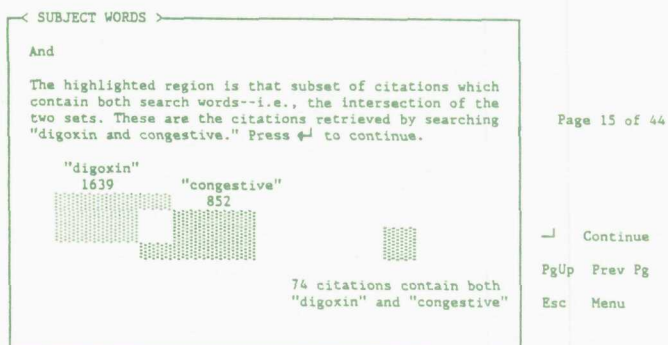

Figure 2

In these chapters, users can see a sample GRATEFUL MED MEDLINE search from start to finish, learn about the structure and contents of MEDLINE, and be introduced to the workings of GRATEFUL MED's Input Form screen. Each screen presents a small amount of information, without clutter. Often, dynamic

graphics are used to demonstrate concepts. For example, in Chapter 5 "Basic Search Techniques," the screens (reproduced in this article as Figures 2 and 3) are part of the explanation of the way GRATEFUL MED combines terms entered on a subject line.

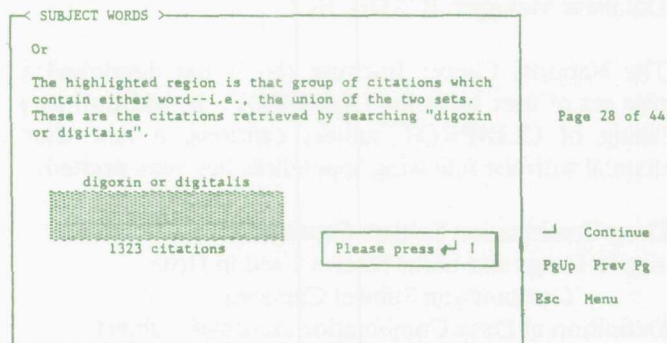

Figure 3

To enhance learning, users are also frequently prompted to interact with "How To," by typing in search terms or selecting menu choices. Most chapters or sections end with "Check it out !" screens which quiz the user on the concepts covered in the chapter. Of course, all right and wrong answers are explained. Figure 4 shows an example.

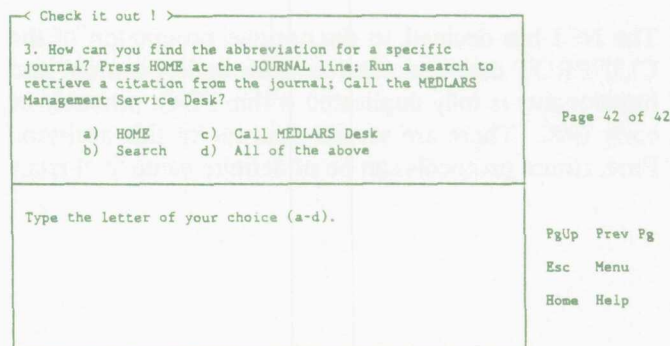

Figure 4

If you don't know the right answer, better order your copy of "How To" right away!

The last three chapters of "How To" contain additional information, such as details on all of the different databases and the Input Form screens used to search them on GRATEFUL MED. There is also information on many "advanced" features, such as the Search Engine. Even experienced users can learn quite a bit from these chapters. Figure 5 shows one of the hints, which is different ways to use subheadings on the Input form screen.

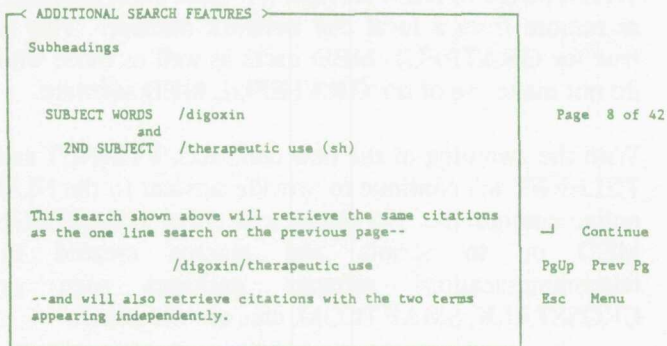

Figure 5

Figure 6 has an example of some pointers on using DOS to maximize GRATEFUL MED's features.

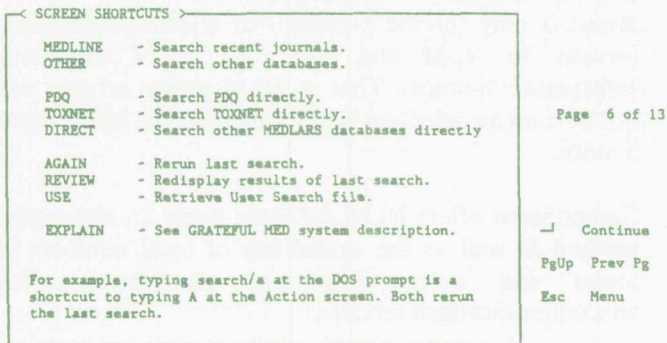

Figure 6

"How To's" convenient Main Menu and "Chapter" design, along with the detailed index, allow quick access to specific concepts, for both the GRATEFUL MED expert and newcomer. "How To" should become as valuable as the current *User's Guide* as a handy source for GRATEFUL MED information.

"How To" A Tutorial for GRATEFUL MED comes on three floppy (5-1/4") disks, or one 3-1/2" disk. It can be installed onto a hard disk, or run directly from the floppy drive. It requires a minimum of 256K available RAM, DOS 2.0 or higher and, of course,

an IBM or compatible PC. "How To" is a "stand alone" program; it is completely independent of GRATEFUL MED itself. It is not even necessary to run GRATEFUL MED and "How To" on the same computer.

As mentioned above, "How To" will be made available, free of charge, to anyone who has already purchased any version of GRATEFUL MED. The publication number is PB89-167779. To order your copy, send a mailing label and the publication number to:

U.S. Department of Commerce  
National Technical Information Service  
5285 Port Royal Road  
Springfield, VA 22161

It is not necessary to specify format; each copy of the tutorial will be mailed out on both 5 1/4" and 3 1/2" disks.

**NOTE:**

Installing and starting "How To" is simple--so simple in fact, the instructions are printed right on the disk jacket. However, even the simplest things can get mixed up. The first several thousand "How To" disks produced have the first two steps reversed. Here is how the instructions for "How To" should read:

**For floppy disk operation:**

- Place Disk 1 in the floppy drive
- Set the DOS prompt to A or B
- Type howto and press <Enter>

**For hard disk installation:**

- Place Disk 1 in the floppy drive
- Set the DOS prompt to A or B
- Type hinstall and press <Enter>

Finally, the instructions on the 3.5" floppy disk refer to Disk 1. There is only one 3.5" disk included.

If you are using floppies, you will be prompted to insert other disks as necessary. Also, during a hard disk installation, you will be prompted to insert the other disks to complete the installation process.

## New NLM Telecommunications Contracts for Access

Harry Bennett

Deputy Director for Operations, Office of Computer and  
Communications Systems, NLM

Carolyn B. Tilley

Head, MEDLARS Management Section, NLM

### INTRODUCTION

In 1988 NLM managed a major procurement for telecommunications network services to meet the Department of Health and Human Services (DHHS) needs, including the needs of NLM for an eight year period through 1996. The entire procurement required over two years to complete and provides additional flexibility for our NLM online users. Multiple contracts were awarded so that, in addition to TYMNET (McDonnell Douglas) and TELENET (GTE - TELENET) who had been providing online access to NLM, access is now also available through CompuServe and INFONET (Computer Services Corporation). A fifth contractor, IBM Corporation, was selected to provide synchronous services only, which currently does not pertain to online MEDLARS access.

The following outlines the services of interest to NLM MEDLARS users that will be provided under the new contracts.

### CURRENT MEDLARS ACCESS METHODS; NO CHANGE - TYMNET/TELENET

TYMNET and TELENET have been telecommunications contractors for NLM services since 1971 and 1976, respectively. These networks both offer asynchronous, full- or half-duplex telecommunications service via local numbers in hundreds of U.S. cities (and internationally) for terminal/modem operating speeds of 300, 1200, and 2400 baud. 2400 baud service is available in many cities but not all. GRATEFUL MED currently contains access protocols for both TYMNET and TELENET, as well as the half-duplex Direct Dial protocols for Washington D.C. metropolitan users. Also, TYMNET and TELENET support toll-free

WATS access to NLM services for those users identified as remote from a local dial network number. This is true for GRATEFUL MED users as well as those who do not make use of the GRATEFUL MED software.

With the awarding of the new contracts, TYMNET and TELENET will continue to provide services to the NLM online community. No changes to either GRATEFUL MED or to scripts and macros created in telecommunications software packages such as CROSSTALK, SMARTCOM, etc., are necessary.

### NEW MEDLARS ACCESS METHODS - COMPUSERVE AND INFONET

CompuServe is known as both a telecommunications and information services supplier. The new contract award is only for the provision of telecommunications services to NLM and NOT for the CompuServe Information Service. That is, NLM online services will not be a menu selection in the CompuServe Information Service.

CompuServe offers NLM database users an alternative method as well as the availability of local numbers in towns and cities that may not have other telecommunications services.

INFONET is the second telecommunications contractor new to NLM users. It offers NLM users another access method as well as local numbers in many towns and cities that may or may not have other network telecommunications service numbers.

CompuServe and INFONET network access have not been programmed into GRATEFUL MED. It is expected that access will be included with the Version 5.0 update of the software expected in the Winter of 1989. NLM is investigating whether or not CompuServe and INFONET access can be made available to GRATEFUL MED users before the next software update. Therefore, do not enter CompuServe or INFONET access numbers into Version 4.0 of GRATEFUL MED.

The access instructions and the list of phone numbers will be published in the next issue of the *NLM Technical Bulletin*.

**NOTE FOR WATS USERS**

If you are using GRATEFUL MED and cannot locate local TELENET or TYMNET numbers or if you do not use GRATEFUL MED but are remote from any of the four telecommunications vendor numbers, please contact the MEDLARS Management Service Desk about WATS service. NLM plans on contacting ALL WATS users regarding CompuServe and INFONET

WATS access this spring. TELENET and TYMNET WATS service is an option with GRATEFUL MED and will continue to be supported. If you are using WATS services and a local network number becomes available with this addition of two more telecommunications providers, please switch to the local service. GRATEFUL MED users cannot switch to either CompuServe or INFONET WATS access with the present version of the software.

[Editor's Note: Each month the NLM Technical Bulletin features a column concerning GRATEFUL MED, often consisting of questions/answers. Contributions for this column will be appreciated.]

*For some reason, I am not getting the opportunity to print the citations after I review them. Why is this?*

If you do not see the message, "Do you have a printer and want to print relevant citations?" it is because you have set the Special Application, "Write all printer output to BIB?" to "YES." This option is intended for users who want all their relevant retrieval written to a computer file which they can then import into other software such as a reference organizer program. Because these users generally do not want to directly print from GRATEFUL MED, the program does not offer printing with the BIB file activated. To change things back to the default settings so that you will be prompted for printing, select CHANGE from the ACTION screen and select Special Applications. From the Special Application Screen use the Ins (Insert) key to toggle the setting for "Write all printer output to BIB?" to "NO." Be sure to hit the End key twice in order to save this change.

*We have GRATEFUL MED loaded on the hard disk of a multi-purpose computer in our library so students and staff can use it. We need to prevent them from accessing SETUP but the Special Application that restricts this causes a screen with a design to appear when the user quits the program. However, when our users have finished searching, it is necessary for them to return to a menu screen which offers the other services available on the computer - and the design screen makes this difficult. Is there any way we can prevent access to SETUP and still allow users to exit the program normally?*

Yes. Rather than using the Special Application, however, you must disable the file that actually runs SETUP. To do this first select CHANGE from the ACTION screen, and then select Special Applications. On the Special Applications screen make sure you have the setting for "Disable SETUP from GRATEFUL MED," set for "NO." (That's right, "NO.") Be sure to hit the End key until you get back to the initial screen where you can hit the letter "Q" in order to quit the program. Once at the DOS prompt in the GRATEFUL MED subdirectory, you can disable SETUP using the DOS command to rename the file that runs SETUP (SETUP.EXE) to something else. For example:

```
C> ren setup.exe setup.dud
```

This will prevent SETUP from running even if a user selects CHANGE from the ACTION screen.

Note: If you ever need to change something in SETUP you should re-activate SETUP, by renaming SETUP.DUD to SETUP.EXE.

*I saved a search using the MEDLINE Input Screen but now I want to use the strategy on the Health Planning & Administration database instead. Is there an easy way to change my saved search?*

That depends on what you consider easy. For users who are not comfortable with editing computer files, the best advice is to re-enter the strategy using the Input Screen for each database in which you want the search to run. If you decide to copy a strategy from one database screen to another it may be helpful if you use Shift/PrtSc to print the Input Screen with the terms you want to copy. (Remember also, that you can save Input Screen strategies without running the searches.)

If you like tinkering with files, you can use EDLIN or any other text editor to alter a saved strategy so that it will run in another database available with GRATEFUL MED. For example, let's say you saved a strategy on the MEDLINE Input Screen and named it, "policy." The act of saving this strategy creates an ASCII file named, "policy.med" which contains, among other things, your search terms. You then decide that you would rather run this search in HEALTH. To make this change you must edit the first line of "policy.med" like this:

C> edlin policy.med      <- enter EDLIN command

End of file

\*1                              <- enter line number "1"

1\*'MEDLINE'

1\*'HEALTH'                      <- enter new database name  
with single quotes

\*e                              <- enter "e" to end edit

Now when you select "policy.med" for searching from the list of SAVED searches (see last month's column) it will appear on an Input Screen for HEALTH rather than MEDLINE.

Note: Section 5 of the *User's Guide*: GRATEFUL MED Search Engine has more tips on manipulating search files.

GRATEFUL MED users should also note the following articles and/or features in this issue:

## BIOSIS Codes Mapped to MeSH

Dorothy Moore

Technical Information Specialist, Specialized Information Services,  
NLM

With the latest regeneration of TOXLINE, a subfile called Toxicological Aspects of Environmental Health, known by the acronym BIOSIS, had both a Keywords (KW) and a MeSH Headings (MH) field added. The keywords in the BIOSIS records, from 1985 forward, have been mapped to Mesh terms in an initial effort to make more of the TOXLINE subfiles MeSH-searchable. 129,092 BIOSIS records were affected. Some 535 Concept Codes and 824 Biosystematic Codes were mapped to MeSH. Concept Codes and Biosystematic Codes are the controlled vocabulary used consistently by the BioSciences Information Service, the publisher of Biological Abstracts, in indexing. The Concept Codes are used to index broad subjects, while the Biosystematic Codes, which represent taxonomic categories, are used to index organisms.

The mapping of the BIOSIS Codes to MeSH makes the subfile BIOSIS MeSH-searchable, but primarily for broad concepts. Although mapping was to Codes as applied by BIOSIS, it does not provide the same level of specificity as actual indexing of individual records with MeSH terms. In addition, because the scope of MeSH necessarily differs from that of the BIOSIS controlled vocabulary, many BIOSIS concepts, especially organisms, were mapped at broader levels in MeSH because more specific terms are unavailable. On the other hand, many of the BIOSIS Codes mapped to synonymous or near synonymous terms in MeSH.

In the sample TOXLINE record below, both the Keywords (KW) and MeSH Headings (MH) fields are displayed.

Monthly Search Hint:

## New COMMENTS (CM) Field

### BACKGROUND

The Comments (CM) field became a part of MEDLINE<sup>®</sup>, its backfiles, AIDSLINE<sup>®</sup>, and HEALTH with the 8904 (EM) update. At present, linkages will be provided for comments in journals with a publication date of 1989 onward; the item(s) being commented upon must be published in the same journal title. Linkages will be provided for the following: 1) announcements or notices which serve as quasi retractions -- i.e., in lieu of an author's formally retracting previous work, an editor may issue a statement alerting readers to the questionable nature of the published article (if the statement does not meet NLM's definition of a retraction, it may be considered a comment); 2) letters to the editor that consist of a comment on another article (the bulk of comments will fall into this category); and 3) substantive articles whose primary contents consist of comments on another article. At this time, linkages will not be provided for editorials that introduce an article or series of articles in an issue, or for articles that update an earlier article. (An exception is the Consensus Conference for which linkages will be provided.) These will be phased in later. The field, when present in citations, will print in all standard print commands (SD, FU, DL, AR) after the Number of References (RF) field and before the Source (SO) field.

The Comments field can currently be found in one of two formats: 1) the introductory phrase "Comment on:" which indicates that the citation is to the published comment itself, or 2) the introductory phrase "Comment in:" which indicates that the citation is to the original

article upon which comment is being made. The NLM comments policy will often result in two citations with the CM fields pointing to each other. It is possible, however, that the published comment will not merit indexing; in these cases, only the original citation will be updated to include "Comment in:" information. See Figure 1 for an example of two CM fields pointing to each other.

### SEARCHING THE COMMENTS FIELD

Although it is anticipated that information in the CM field is largely for printing purposes as an alerting mechanism, certain pieces of the CM field are directly searchable in case you are intentionally looking for this kind of information. Both the phrases "comment on:" or "comment in:" are directly searchable, but to do this, you must prequalify the phrase with (CM). This should be done to avoid being put into the online COMMENT command mode. See Figure 2, for examples of searching the CM field vs. the COMMENT command.

The Journal Title Abbreviation contained in the Comments field is also directly searchable. Just enter the Title Abbreviation qualified with (CM). See Figure 3.

Another method for retrieving citations containing comments is to use the Neighbor (NBR) command and then Select (SEL) from that display. See Figure 4.

For additional information on the Comments field, see the supplement to the February 1989 *NLM Technical Bulletin* (the *Special Issue*).

# Serials Update

## INDEXED TITLES UPDATE, MARCH 1989

The following titles cited in MEDLINE, HEALTH, and POPLINE have recently been selected for indexing, undergone a title change, or ceased publication. This list is not cumulative; the information provided is only for titles whose status has changed since the

last UPDATE. More detailed information may be found in SERLINE. For further information, please contact MMS or Ms. Esther Baldinger, (301) 496-1276, Technical Services Division, NLM.
