

## COVID-19 COMMUNITY RESPONSE SURVEY GUIDANCE

The goal of this toolkit is to provide a set of standardized quantitative and qualitative assessments to harmonize data collection efforts and facilitate comparisons of the impact of the novel coronavirus (COVID-19) and promote collaborations across research efforts. This is intended to be a dynamic resource that will evolve as the epidemic does.

Please note that these questions were developed rapidly with input from multiple sources. We have included sources of questions where appropriate. Because the questions were developed rapidly, there was no time for piloting and so we do not have estimates of time required for each module. In addition, we recognize that you might identify errors or inconsistencies after implementation. We would like to hear from you about the modules you are using, time spent per module, modifications you make and any additional feedback you have. We will make modifications as appropriate and share changes with other researchers who are also using this survey.

### RECOMMENDED INTRODUCTION FOR SURVEYS

We are conducting a survey to help us better understand how the novel coronavirus (COVID-19) pandemic is affecting people's lives. To help us better understand how people's physical, emotional and mental health are being affected, we would like to ask you questions about your possible exposure to the virus, your experiences with testing and treatment and some questions about how your life has changed as a result of COVID-19 and the preventive measures that have been put in place.

The interview will take us approximately 20-30 minutes, depending on your experiences.

Would it be okay to ask you questions about your COVID-19 related experiences today?

Yes  
No

May we call you again over for the next XX months, and possibly longer, to see how you're doing and ask you these questions again?

Yes  
No

### MODULES WITH RECOMMENDED ORDER

*READ: Think of a ladder representing where people stand in the United States. At the top of the ladder are the people who are the best off- those who have the most money, the most education, and the most respected jobs. At the bottom are the people who are the worst off- who have the least money, least education, and the least respected jobs or no job. The higher up you are on this ladder, the closer you are to the people at the very top. The lower you are, the closer you are to the people at the very bottom.*

15. Considering where you were before March 1, 2020 (the start of the COVID-19 pandemic), where would you have placed yourself of this ladder from 1-10? 10 is the top and 1 is the bottom.
