New MeSH Headings for 2017
Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

A549 Cells
An immortalized cell line derived from human ADENOCARCINOMA, ALVEOLAR basal epithelial cells isolated from the lungs of a male patient in 1972. The cell line is positive for KERATIN, can synthesize LECITHIN, and contains high levels of POLYUNSATURATED FATTY ACIDS in its PLASMA MEMBRANE. It is used as a model for PULMONARY ALVEOLI function and virus infections, as a TRANSFECTION host, and for PRECLINICAL DRUG EVALUATION.

AN: almost always NIM with no subheadings; check HUMAN; do not routinely add ADENOCARCINOMA, ALVEOLAR

Tree locations:
Cell Line, Tumor A11.251.210.190.080
A11.251.860.180.080
Epithelial Cells A11.436.054

Abdominal Oblique Muscles
Muscles of the anterolateral abdominal wall consisting of the external oblique and the internal oblique muscles. The external abdominal oblique muscle fibers extend from lower thoracic ribs to the linea alba and the iliac crest. The internal abdominal oblique extend superomedially beneath the external oblique muscles.

Tree locations:
Abdominal Muscles A02.633.567.050.375

AC133 Antigen
A member of the prominin family, AC133 Antigen is a 5-transmembrane antigen occurring as several isoforms produced by alternative splicing which are processed into mature forms. In humans, it is expressed as a subset of CD34 (bright) human hematopoietic stem cells and CD34 positive leukemias. Functionally, it is associated with roles in cell differentiation, proliferation, and apoptosis. Specifically, it regulates the organization of apical plasma membrane in epithelial cells, disk morphogenesis during early retinal development, MAPK and Akt signaling pathways, and in cholesterol metabolism.

Tree locations:

D23.101.100.110.015
Glycoproteins D09.400.430.250

Acute Febrile Encephalopathy
Acute onset of fever accompanied by seizures, cerebral inflammation and a change in mental status (e.g., confusion, disorientation, and coma).

Tree locations:
Brain Diseases C10.228.140.021

Acute Retroviral Syndrome
Early stage of HIV infection. Symptoms resemble INFLUENZA or INFECTIOUS MONONUCLEOSIS.

Tree locations:
HIV Infections C02.782.815.616.400.044
C02.800.801.400.044
C20.673.480.044

ADAM10 Protein
A disintegrin and metalloproteinase domain-containing protein. It cleaves the membrane-bound precursor of TUMOR NECROSIS FACTOR-ALPHA between ALANINE 76 and VALINE 77 to its functional form, as well as several other CELL SURFACE PROTEINS to their soluble forms, including AMYLOID BETA-PROTEIN PRECURSOR and PRION PROTEIN.

Tree locations:
ADAM Proteins D08.811.277.656.675.374.102.250
D09.400.430.500.250

Antigens, CD D23.050.301.264.035.048
D23.101.100.110.048
### ADAM12 Protein

A disintegrin and metalloproteinase domain-containing protein that is expressed as two alternatively-spliced forms: a long transmembrane form (ADAM12-L) and a short soluble form (ADAM12-S). It modulates the cleavage of INSULIN-LIKE GROWTH FACTOR BINDING PROTEINS and may also regulate CELL FUSION during MYOGENESIS.

**Tree locations:**
- ADAM Proteins: D08.811.277.656.675.374.102.125
- D09.400.430.500.125
- D12.776.395.033.125

### ADAM17 Protein

A disintegrin and metalloproteinase domain-containing protein that cleaves the membrane-bound precursor of TUMOR NECROSIS FACTOR-ALPHA to its mature form. It cleaves several other CELL SURFACE PROTEINS, including INTERLEUKIN-1 RECEPTOR TYPE II; TRANSFORMING GROWTH FACTOR ALPHA; L-SELECTIN; MUCIN-1; and AMYLOID BETA-PROTEIN PRECURSOR. It can also function as an activator of the Notch signaling pathway by mediating the cleavage of NOTCH RECEPTORS.

**Tree locations:**
- ADAM Proteins: D08.811.277.656.675.374.102.375
- D09.400.430.500.375
- D12.776.395.033.375
- Antigens, CD: D23.050.301.264.035.057
- D23.101.100.110.057

### ADAMTS Proteins

A subfamily of ADAM proteases that are distinguished by the presence of one or more THROMBOSPONDIN type-I repeats (TSRs). These are three-strand motifs that contain characteristic TRYPTOPHAN, ARGinine, and CYSTEINE residues respectively. In contrast to ADAM proteins, which reside on CELL MEMBRANES, ADAMTS proteases are secreted and function in the EXTRACELLULAR MATRIX.

**Tree locations:**
- ADAM Proteins: D08.811.277.656.675.374.102.500
- D09.400.430.500.500
- D12.776.395.033.500
- D12.776.860.300.085

### ADAMTS1 Protein

An ADAMTS protease that contains two disintegrin loops and three C-terminal thrombospondin (TS) motifs. It functions as an ANGIOGENESIS INHIBITOR as well as in normal tissue growth and fertility.

**Tree locations:**
- ADAMTS Proteins: D08.811.277.656.675.374.102.500.500
- D09.400.430.500.500
- D12.776.395.033.500.500
- D12.776.860.300.085.500

### ADAMTS13 Protein

An ADAMTS protease that contains eight thrombospondin (TS) motifs. It cleaves VON WILLEBRAND FACTOR to control vWF-mediated THROMBOSIS. Mutations in the ADAMTS13 gene have been identified in familial cases of PURPURA, THROMBOTIC THROMBOCYTOPENIC and defects in ADAMTS13 activity are associated with MYOCARDIAL INFARCTION; BRAIN ISCHEMIA; PRE-ECLAMPSIA; and MALARIA.

**Tree locations:**
- ADAMTS Proteins: D08.811.277.656.675.374.102.500.813
- D09.400.430.500.813
- D12.776.395.033.500.813
- D12.776.860.300.085.813

### ADAMTS4 Protein

An ADAMTS protease similar to ADAMTS5 PROTEIN. It contains a single C-terminal thrombospondin (TS) motif and cleaves AGGREGAN in CARTILAGE. It may also be involved in the destruction of aggrecan in ARTHRITIS.

**Tree locations:**
- ADAMTS Proteins: D08.811.277.656.675.374.102.500.844
- D09.400.430.500.844
- D12.776.395.033.500.844
- D12.776.860.300.085.844

### ADAMTS5 Protein

An ADAMTS protease that contains two C-terminal thrombospondin (TS) motifs. It functions primarily as an aggrecanase, cleaving AGGREGAN in CARTILAGE, and may be involved in the destruction of aggrecan in ARTHRITIS.

**Tree locations:**
- ADAMTS Proteins: D08.811.277.656.675.374.102.500.875
- D09.400.430.500.875
- D12.776.395.033.500.875
- D12.776.860.300.085.875

### ADAMTS7 Protein

An ADAMTS protease that contains four central and four C-terminal thrombospondin (TS) motifs. It binds to and degrades CARTILAGE OLIGOMERIC MATRIX PROTEIN.

**Tree locations:**
- ADAMTS Proteins: D08.811.277.656.675.374.102.500.937
- D09.400.430.500.937
- D12.776.395.033.500.937
- D12.776.860.300.085.937

### AlkB Enzymes
A family of alpha-KETOGLUTARIC ACID and Fe(II)-dependent dioxygenases that are homologous to AlkB, an enzyme that repairs alkylated nucleic acids in E. coli. The mammalian homologs have diverse substrate specificities and functions that include DNA REPAIR, generating unique wobble modifications in URIDINE tRNA, demethylation of nucleotides in DNA and RNA, and demethylation of LYSINE residues on certain proteins, including ACTIN and histones (HISTONE CODE).

**Tree locations:**
- DNA Repair Enzymes D08.811.074.062
- Dioxygenases D08.811.682.690.416.139

### AlkB Homolog 1, Histone H2a Dioxygenase
A dioxygenase and alkylation repair homolog that functions by oxidative demethylation in RNA and DNA REPAIR of substrates which contain 3-methylcytosine. It also functions as one of the HISTONE DEMETHYLASES involved in embryonic development and maintaining the pluripotency of EMBRYONIC STEM CELLS.

**Tree locations:**
- AlkB Enzymes D08.811.074.062.500
- D08.811.682.690.416.139.500

### AlkB Homolog 2, Alpha-Ketoglutarate-Dependent Dioxygenase
A dioxygenase and alkylation repair homolog that repairs alkylated DNA and RNA containing 1-methyladenine and 3-methylcytosine by oxidative demethylation. It can also repair alkylated DNA containing 1-ethenoadenine in vitro. It has highest affinity for double-stranded DNA.

**Tree locations:**
- AlkB Enzymes D08.811.074.062.750
- D08.811.682.690.416.139.750

### AlkB Homolog 3, Alpha-Ketoglutarate-Dependent Dioxygenase
A dioxygenase and alkylation repair homolog that repairs alkylated DNA containing 1-methyladenine (1meA) and 3-methylcytosine (3meC) by oxidative demethylation. It has a strong preference for SINGLE-STRANDED DNA and may also act on RNA.

**Tree locations:**
- AlkB Enzymes D08.811.074.062.937
- D08.811.682.690.416.139.968

### AlkB Homolog 4, Lysine Demethylase
A dioxygenase and alkylation repair homolog that mediates demethylation of ACTIN monomethylated at 'Lys-84' (K84me1). Demethylation of actin LYSINE 84 (K84me1) is required for maintaining actin and MYOSIN dynamics to support normal cleavage furrow ingression during CYTOKINESIS and CELL MIGRATION. It may also be involved in transcription regulation.

**Tree locations:**
- AlkB Enzymes D08.811.682.690.416.139.937
- Oxidoreductases, N-Demethylating D08.811.682.662.582.138
- D08.811.682.662.582.207

### AlkB Homolog 5, RNA Demethylase
A dioxygenase and alkylation repair homolog that demethylates RNA by oxidative demethylation. It specifically demethylates N(6)-methyladenosine (m6A) RNA, the most common internal modification of MESSENGER RNA in higher eukaryotes. It can also demethylate N(6)-methyladenosine in SINGLE-STRANDED DNA.

**Tree locations:**
- AlkB Enzymes D08.811.074.062.937
- D08.811.682.690.416.139.968

### AlkB Homolog 8, tRNA Methyltransferase
A dioxygenase and alkylation repair homolog that catalyzes the methylation of 5-carboxymethyl URIDINE to 5-methylcarboxymethyl uridine at the wobble position of the ANTICODON loop in TRANSFER RNA (tRNA) via its methyltransferase domain. It has a preference for tRNA (ARGININE) and tRNA (GLUTAMATE), and does not bind tRNA (LYSINE).

**Tree locations:**
- AlkB Enzymes D08.811.682.690.416.139.984
- tRNA Methyltransferases D08.811.913.555.500.925.500

### Allergists
Physicians specializing in treating individuals with hypersensitivity to ALLERGENS.

**Tree locations:**
- Physicians M01.526.485.810.020
- N02.360.810.020
### Alpha-Ketoglutarate-Dependent Dioxygenase FTO

A dioxygenase that repairs alkylated DNA and RNA by oxidative demethylation. It has highest activity towards single-stranded RNA containing 3-methyluracil, followed by single-stranded DNA containing 3-methylthymine and specifically demethylates N(6)-methyladenosine (m6A) RNA, the most common internal modification of MESSANGER RNA (mRNA) in higher EUKARYOTES. It contributes to the regulation of the global metabolic rate, energy HOMEOSTASIS, as well as body fat accumulation by regulating the differentiation of ADIPOCYTES into BROWN FAT CELLS or WHITE FAT CELLS.

**Tree locations:**
- AlkB Enzymes  D08.811.074.062.968
- D08.811.682.690.416.139.992
- Oxidoreductases, N-  D08.811.682.662.582.242
- Demethylating

### Amaryllidaceae

A family of herbaceous plants with bulbs or rhizomes in the order Asparagales.

**Tree locations:**
- Asparagales  B01.650.940.800.575.100.099.050

### Anesthesiologists

Physicians specializing in ANESTHESIOLOGY.

**Tree locations:**
- Anesthesiologists  M01.526.485.140.040
- N02.360.140.040
- Physicians  M01.526.485.810.040
- N02.360.810.040

### Anesthesiologists

Persons trained and certified to administer ANESTHETICS.

**Tree locations:**
- Health Personnel  M01.526.485.140
- N02.360.140

### Ankyloglossia

A severe congenital restriction of TONGUE movement, resulting from fusion or adherence of the tongue to the floor of the mouth. In partial ankyloglossia (tongue-tie) the LINGUAL FRENUM is abnormally short, or is attached too close to the tip of the tongue. OMIM: 106280

**Tree locations:**
- Stomatognathic Diseases  C07.160

### Annulus Fibrosus

Outer portion of the intervertebral disc that surrounds the NUCLEUS PULPOSUS.

**Tree locations:**
- Intervertebral Disc  A02.165.308.410.250
- A02.835.232.834.432.250
- A10.165.382.350.050.250

### Antagomirs

Chemically-engineered oligonucleotides used to selectively inhibit expression of target genes through sequence-specific binding of corresponding microRNA (miRNA) sites.

**Tree locations:**
- Oligonucleotides  D13.695.578.424.112

### Anorectal Malformations

Congenital defects in the anus and the rectum often involving the urinary and genital tracts.

**Tree locations:**
- Digestive System Abnormalities  C06.198.025
- C16.131.314.047

### Anterior Cruciate Ligament Injuries

Sprain or tear injuries to the ANTERIOR CRUCIATE LIGAMENT of the knee.

**Tree locations:**
- Knee Injuries  C26.558.554.213

### Anti-Vaccination Movement

Group activities directed against VACCINATION.

**Tree locations:**
- Human Activities  I03.088
New MeSH Headings for 2017
Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

**Antigen Peptide Transporter-1**
An ATP-binding cassette, sub-family B protein (P-glycoproteins) that functions in the transport of ANTIGENS from the CYTOPLASM to the ENDOPLASMIC RETICULUM for association with HISTOCOMPATIBILITY ANTIGENS CLASS I peptides. It also acts as a molecular scaffold for the final stage of MHC class I PROTEIN FOLDING.

**Tree locations:**
P-Glycoproteins D12.776.157.530.100.652.250
D12.776.157.530.450.074.500.500.875.250
D12.776.395.550.020.610.100.610.250
D12.776.543.585.100.610.250
D12.776.543.585.450.074.500.500.875.250

**Antigen Peptide Transporter-2**
An ATP-binding cassette, sub-family B protein (P-glycoproteins) that functions in the transport of ANTIGENS from the CYTOPLASM to the ENDOPLASMIC RETICULUM for association with HISTOCOMPATIBILITY ANTIGENS CLASS I peptides. It functions as a heterodimer with ANTIGEN PEPTIDE TRANSPORTER-1.

**Tree locations:**
P-Glycoproteins D12.776.157.530.100.652.375
D12.776.157.530.450.074.500.500.875.375
D12.776.395.550.020.610.458
D12.776.543.550.192.610.458
D12.776.543.585.100.610.375
D12.776.543.585.450.074.500.500.875.375

**Antigens, CD99**
A cell adhesion molecule that, in humans, is encoded by a gene on the PSEUDOAUTOSOMAL REGION of SEX CHROMOSOMES. It functions in CELL ADHESION of T-LYMPHOCYTES and ROSETTE FORMATION by ERYTHROCYTES. It is also involved in the migration of LEUKOCYTES through the ENDOTHELIUM BASEMENT MEMBRANE. CD99 co-localizes with, but functions independently of PECAM-1.

**Tree locations:**
Antigens, CD D23.050.301.264.035.065
D23.101.100.110.065
Cell Adhesion Molecules D12.776.395.550.200.049
D12.776.543.550.200.062
D23.050.301.350.049

**Apartheid**
A former political system in SOUTH AFRICA which enforced segregation in all forms, including physical, political, legal, and economic discrimination, against all non-white, non-European racial groups.

**Tree locations:**
Political Systems I01.696.050
Race Relations I01.880.735.820.500.125

**APOBEC Deaminases**
A family of conserved cytidine deaminases that catalyze the DEAMINATION of CYTIDINE to URIDINE. They are characterized by N and C-terminal zinc-dependent catalytic domains and have important functions in RNA EDITING; EPIGENETIC PROCESSES; and the INNATE IMMUNE RESPONSE against viruses.

**Tree locations:**
Cytidine Deaminase D08.811.277.151.486.250.500

**APOBEC-1 Deaminase**
An APOBEC deaminase catalytic subunit of the apolipoprotein B (APOB) MESSENGER RNA (mRNA) editing enzyme complex that is involved in post-transcriptional editing of a CAA codon for GLYCINE to a UAA STOP CODON in the ApoB mRNA. It also functions in CGA (ARGININE) to UGA STOP CODON editing of NEUROFIBROMIN 1 mRNA and EPIGENETIC PROCESSES.

**Tree locations:**
APOBEC Deaminases D08.811.277.151.486.250.500.500

**APOBEC-3G Deaminase**
An APOBEC deaminase that functions as an inhibitor of RETROVIRIDAE replication and inhibits the mobility of RETROTRANSPOSONS via deaminase-dependent and independent mechanisms. It is selective for SINGLE-STRANDED DNA and does not deaminate double-stranded DNA or single or DOUBLE-STRANDED RNA. It exhibits potent antiviral activity against VIF PROTEIN deficient HIV-1 through the creation of hypermutations in the VIRAL DNA. It also has anti-viral activity against SIMIAN IMMUNODEFICIENCY VIRUSES and HEPATITIS B VIRUS.

**Tree locations:**
APOBEC Deaminases D08.811.277.151.486.250.500.750

**Apolipoprotein A-V**
A minor apolipoprotein that associates with HIGH-DENSITY LIPOPROTEINS (HDL), VERY-LOW-DENSITY LIPOPROTEINS (VLDL), and CHYLOMICRONS. It regulates levels of plasma TRIGLYCERIDES by activating APOLIPOPROTEIN C-II LIPOPROTEIN LIPASE and inhibiting hepatic VLDL triglyceride hydrolysis.

**Tree locations:**
Apolipoproteins A D10.532.091.200.575
D12.776.070.400.200.575
D12.776.521.120.200.575
Aponeurosis

The flattened and/or expanded “tendon-like” dense fibrous connective tissue that connects skeletal muscles to each other or to bone.

Tree locations:
Musculoskeletal System A02.083

Applied Behavior Analysis

Behavioral science applied with the aim of improving socially important issues such as behavior problems and learning. For individuals diagnosed with intellectual and developmental disabilities including AUTISM, techniques can be categorized as comprehensive or focused.

Tree locations:
Behavior Therapy F04.754.137.131

Arthroplasty, Replacement, Shoulder

Replacement of the SHOULDER JOINT.

Tree locations:
Arthroplasty, Replacement E04.555.110.110.299
E04.650.110.299
E04.680.101.110.299

Asparagaceae

A family of flowering subshrubs and shrubs in the class Magnoliopsida.

Tree locations:
Asparagales B01.650.940.800.575.100.099.060

Asparagales

An order of monocotyledons (superorder Lilianae) in the class Magnoliopsida (Angiosperms).

Tree locations:
Angiosperms B01.650.940.800.575.100.099

ATP Binding Cassette Transporter, Sub-Family G

A subfamily of ATP binding cassette transporters that function primarily in the transport of lipids and STEROLS across the CELL MEMBRANE. They also export UREA and various drugs resulting in MULTIDRUG RESISTANCE. They are smaller than most other ATP binding cassette proteins, consisting of six transmembrane alpha helices and a distinct N-terminal cytoplasmic ATP-binding domain, and function as homo- or heterodimers with other ABCG transporters.

Tree locations:
ATP-Binding Cassette D12.776.157.530.100.228
Transporters D12.776.395.550.020.457
D12.776.543.550.192.457
D12.776.543.585.100.228

ATP Binding Cassette Transporter, Sub-Family G, Member 1

An ATP binding cassette transporter that functions primarily as a lipid and CHOLESTEROL exporter in MACROPHAGES. It may also function in intracellular lipid transport and homoeostasis.

Tree locations:
ATP Binding Cassette D12.776.157.530.100.228.250
Transporter, Sub-Family G D12.776.395.550.020.457.250

D12.776.543.585.100.228.250

ATP Binding Cassette Transporter, Sub-Family G, Member 2

An ATP binding cassette transporter, sub-family G protein that functions as a high capacity UREA exporter, transporter of STEROLS, and in the absorption and efflux of many drugs. Its efflux activity for ANTINEOPLASTIC AGENTS contributes to DRUG RESISTANCE. It functions as a homodimer and is expressed by cells in a variety of organs, as well as by NEOPLASTIC STEM CELLS.

**Autophagy-Related Protein 8 Family**

UBIQUITIN-like modifier proteins that function in CYTOPLASM to VACUOLE transport (Cvt), vesicle transport within the GOLGI APPARATUS, and AUTOPHAGOSOME biogenesis. They are also required for selective autophagic degradation of the nucleus (nucleophagy) and MITOPHAGY.

**Tree locations:**
- Autophagy-Related Proteins D12.776.094.407
- Microtubule-Associated Proteins D12.776.220.600.450.100
- Ubiquitins D12.776.947.187

**Autophagy-Related Protein-1 Homolog**

A serine/threonine-protein kinase that functions in AUTOPHAGY in response to starvation. It acts on the PHOSPHATIDYLINOSITOL 3-KINASE complex PIK3C3 to regulate AUTOPHAGOSOME formation. It also functions as both a downstream effector and negative regulator of mammalian target of rapamycin complex 1 (mTORC1) and is activated by AMPK, which it also negatively regulates.

**Tree locations:**
- Autophagy-Related Proteins D12.776.094.438
- Intracellular Signaling D12.644.360.081
- Peptides and Proteins D12.776.476.078
- Protein-Serine-Threonine Kinases D08.811.913.696.682.700.108

**Autophagy-Related Proteins**

Proteins and enzymes that function, often as components of MULTIPROTEIN COMPLEXES, to assemble AUTOPHAGOSOMES and carry out AUTOPHAGY.

**Tree locations:**
- Proteins D12.776.094

**Axon Fasciculation**

Process of organizing neighboring AXONS into a bundle or a fascicle during neurite outgrowth mediated by CELL ADHESION MOLECULES.

**Tree locations:**
- Neuronal Outgrowth G04.152.912.750.750
- G07.345.500.325.377.687.750.500
- G08.686.784.170.450.500.750.500
- G11.561.620.750.250

**Axon Guidance**

The mechanism by which a neuronal process outgrows toward a target led by the GROWTH CONE. Local guidance cues are provided by cell surface proteins that act on the growing axon.

**Tree locations:**
- Neuronal Outgrowth G04.152.912.750.500
- G07.345.500.325.377.687.750.750
- G08.686.784.170.450.500.750.750
- G11.561.620.750.500

**Axon Initial Segment**

First segment of axon that connects distal axon segments to the neuronal CELL BODY at the axon hillock region. The axon initial segment is not protected by the MYELIN SHEATH and has properties critical for axonal growth. The axon initial segment and the axon hillock form an axonal trigger zone.

**Tree locations:**
- Axons A08.675.542.145.250
- A11.284.180.075.125
- A11.671.137.170
- A11.671.501.145.250

**B30.2-SPRY Domain**

A protein interaction domain that is characterized by a bent “beta-sandwich” consisting of two antiparallel beta-sheets. It occurs in eukaryotic proteins, including many TRIPARTITE MOTIF PROTEINS, which function in a variety of cellular processes.

**Tree locations:**
- Protein Interaction D02.111.570.820.709.275.750.500.290
- Domains and Motifs

**Bacillus amyloliquefaciens**

A non-pathogenic species of Bacillus that occurs in soil as well as some fermented vegetables and FERMENTED DAIRY PRODUCTS. It produces BACTERIOCINS and ANTIFUNGAL AGENTS and is used in FOOD PRESERVATION as well as a PROBIOTIC.

**Tree locations:**
- Bacillus B03.300.390.400.158.218.076
- B03.353.500.100.218.076
- B03.510.100.100.218.076
- B03.510.415.400.158.218.076
- B03.510.460.410.158.218.076
**Bacillus clausii**
An alkalophilic species of Bacillus that occurs in soil. It produces ANTI-BACTERIAL AGENTS and is used as a PROBIOTIC.

**Tree locations:**
- Bacillus B03.300.390.400.158.218.283
- B03.353.500.100.218.283
- B03.510.100.100.218.283
- B03.510.415.400.158.218.283
- B03.510.460.410.158.218.283

**Bacillus coagulans**
A microaerophilic, LACTIC ACID producing species of Bacillus that occurs in fermented foods. It also produces ANTI-INFECTIVE AGENTS and is used as a PROBIOTIC.

**Tree locations:**
- Bacillus B03.300.390.400.158.218.314
- B03.353.500.100.218.314
- B03.510.100.100.218.314
- B03.510.415.400.158.218.314
- B03.510.460.410.158.218.314

**Bacillus firmus**
A species of Bacillus that occurs in soil and marine sediments. Many strains are alkalophilic and able to metabolize HEAVY METALS; it may therefore be a useful species for ENVIRONMENTAL BIODEGRADATION.

**Tree locations:**
- Bacillus B03.300.390.400.158.218.345
- B03.353.500.100.218.345
- B03.510.100.100.218.345
- B03.510.415.400.158.218.345
- B03.510.460.410.158.218.345

**Bacillus licheniformis**
A species of Bacillus that occurs in soil and is frequently found on bird feathers. Some strains cause FOODBORNE DISEASE, whereas other strains produce ANTIFUNGAL AGENTS and ANTIBACTERIAL AGENTS and function as PROBIOTICS. This species can also produce enzymes for industrial applications.

**Tree locations:**
- Bacillus B03.300.390.400.158.218.376
- B03.353.500.100.218.376
- B03.510.100.100.218.376
- B03.510.415.400.158.218.376
- B03.510.460.410.158.218.376

**Bacillus pumilus**
A species of Bacillus that occurs in soil, especially around the roots of some plants where it has anti-fungal and anti-nematode activities. It can also produce enzymes for industrial applications.

**Tree locations:**
- Bacillus B03.300.390.400.158.218.613
- B03.353.500.100.218.613
- B03.510.100.100.218.613
- B03.510.415.400.158.218.613
- B03.510.460.410.158.218.613

**Bacteroides thetaiotaomicron**
A species of Bacteroides that is a major constituent of the human GUT MICROBIOTA. It normally produces enzymes important for the digestion of vegetable matter. However, it can also cause OPPORTUNISTIC INFECTIONS that result in intra-abdominal SEPSIS; BACTEREMIA; and PERITONITIS.

**AN:** infection: coordinate IM with BACTERIOIDES INFECTIONS (IM)

**Tree locations:**
- Bacteroides B03.140.094.152.700
- B03.440.425.410.194.152.700

**Bacteroides Thermoduricus**
Bacteria resistant to high temperatures, as in PASTEURIZATION.

**Tree locations:**
- Bacteroides B03.135

**Balloon Enteroscopy**
An endoscopy of the small intestines accomplished while advancing the endoscope, which is assisted by one or two balloons

**Tree locations:**
- Endoscopy, Gastrointestinal E01.370.372.250.250.100
- E01.370.388.250.250.250.070
- E04.210.240.250.080
- E04.502.250.410.218.218.314
### Bankart Lesions

An anterior capsulolabral injury associated with a tear of the anteroinferior GLENOID LABRUM.

**Tree locations:**
- Shoulder Fractures C26.404.625.500
- C26.803.250.500

### Barium Enema

X-RAY examination of LOWER GASTROINTESTINAL TRACT. Imaging is done while a BARIUM COMPOUND (e.g., BARIUM SULFATE) fills the large intestine via the rectum as a CONTRAST MATERIAL.

**Tree locations:**
- Enema E02.319.347.500
- Fluoroscopy E01.370.350.700.225.313

### Bathroom Equipment

Receptacles used for collection of human excrement.

**Tree locations:**
- Equipment and Supplies E07.108

### Bdellovibrio bacteriovorus

A non-pathogenic, obligate aerobic, Gram-negative species of Bdellovibrio that occurs in water and soil, as well as the intestines of birds and mammals. It can infect and lyse pathogenic GRAM-NEGATIVE BACTERIA and can function as a PROBIOTIC and ANTI-BACTERIAL AGENT.

**Tree locations:**
- Bdellovibrio B03.440.400.425.180.500
- B03.660.125.050.500

### Bcl-2-Like Protein 11

A BCL-2-like protein that has a C-terminal BCL-2 homology (BH3) domain and forms heterodimers with other BCL-2 FAMILY PROTEINS. It is a strong inducer of APOPTOSIS and ANOIKIS; several isoforms are expressed (BimEL, Bim L, Bim-alpha, Bim-s; and Bim-gamma) that have different potencies for inducing apoptosis.

**Tree locations:**
- Apoptosis Regulatory Proteins D12.644.360.075.323
- D12.776.476.075.323
- Membrane Proteins D12.776.543.116
- Proto-Oncogene Proteins D12.776.624.664.700.025

### Beclin-1

An autophagy related protein which functions as a core subunit of PHOSPHATIDYLINOSITOL 3-KINASE MULTIPROTEIN COMPLEXES. It mediates the formation of phosphatidylinositol 3-phosphate and functions in AUTOPHAGY, where it is required for maturation of the AUTOPHAGOSOME. It also functions in ENDOCYTOSIS and CYTOKINESIS as part of a separate complex. Beclin-1 associates with INTRACELLULAR MEMBRANES and interacts with the PROTO-ONCOGENE PROTEINS C-BCL-2 and BCL-X PROTEIN.

**Tree locations:**
- Apoptosis Regulatory Proteins D12.644.360.075.335
- D12.776.476.075.335
- Autophagy-Related Proteins D12.776.094.500

### beta-Arrestin 1

A beta-arrestin that functions in the down-regulation of signaling by G-PROTEIN-COUPLED RECEPTORS. It is also a major regulator of INSULIN signaling via the ERK 1-2 PATHWAY, and many other signaling processes, especially in NEURONS and LEUKOCYTES.

**Tree locations:**
- beta-Arrestins D12.644.360.024.098.525.500
- D12.776.157.057.005.525.500
- D12.776.476.024.104.525.500
- D12.776.543.090.525.500

### beta-Arrestin 2

A beta-arrestin that functions similarly to BETA-ARRESTIN 1 in regulating signaling by G-PROTEIN-COUPLED RECEPTORS. It is expressed at high levels in the central nervous system where it may regulate signaling by SYNAPTIC RECEPTORS.

**Tree locations:**
- beta-Arrestins D12.644.360.024.098.525.750
- D12.776.157.057.005.525.750
- D12.776.476.024.104.525.750
- D12.776.543.090.525.750
**beta-Arrestins**

Non-visual system arrestins that negatively regulate G-PROTEIN-COUPLED RECEPTORS (GPCRs) and may also function independently of GPCR signaling. They bind and recruit many different signaling factors, including MITOGEN-ACTIVATED PROTEIN KINASES; SRC-FAMILY-KINASES; and FILAMIN to GPCRs and may recognize different phosphorylation states of the receptors to determine the specificity of the cellular response to signaling.

New MeSH Headings for 2017

Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

Biofortification
Improving the NUTRITIONAL VALUE of plant foods by augmenting the plant's environment, by using PLANT BREEDING, or by GENETIC ENGINEERING plants to increase their ability to synthesize VITAMINS or uptake essential NUTRIENTS from the soil.

Tree locations:
Crop Production J01.040.227.250

Blood Culture
Test to determine the presence of blood infection (e.g. SEPSIS; BACTEREMIA).

Tree locations:
Microbiological Techniques E01.370.225.875.185
E05.200.875.185

Brain Contusion
A bruise of the brain from an impact of the skull.

Tree locations:
Brain Injuries, Traumatic C10.228.140.199.444.375
C10.900.300.087.235.375
C26.915.300.200.194.375
Contusions C26.974.250.500

Brain Injuries, Diffuse
Brain injuries occurring over a wide area instead of specific focal area.

Tree locations:
Brain Injuries C10.228.140.199.388
C10.900.300.087.219
C26.915.300.200.188

Brain Injuries, Traumatic
A form of acquired brain injury which occurs when a sudden trauma causes damage to the brain.

Tree locations:
Brain Injuries C10.228.140.199.444
C10.900.300.087.235
C26.915.300.200.194

Breast Cancer Lymphedema
Abnormal accumulation of lymph in the arm, shoulder and breast area associated with surgical or radiation breast cancer treatments (e.g., MASTECTOMY).

Tree locations:
Lymphedema C15.604.496.160
Postoperative Complications C23.550.767.082

Breast Carcinoma In Situ
A condition in which abnormal cells have not spread outside the duct, lobule, or nipple to other tissues of the breast. There are 3 types of breast carcinoma in situ: DUCTAL CARCINOMA IN SITU; LOBULAR CARCINOMA IN SITU; and PAGET DISEASE OF THE NIPPLE

AN: coordinate IM with BREAST NEOPLASMS (IM)

Tree locations:
Breast Neoplasms C04.588.180.130
C17.800.090.500.130
Carcinoma in Situ C04.557.470.200.240.187

Breast Density
Measurement of relative composition of different BREAST tissue types often determined from MAMMOGRAPHY; ULTRASONOGRAPHY; or MRI.

Tree locations:
Body Constitution E01.370.600.115.275

BTB-POZ Domain
A homodimerization protein interaction domain occurring at the N terminus of proteins that contain multiple copies of either CYS2-HIS2 ZINC FINGERS or KELCH REPEATS. It is characterized by a tightly intertwined dimer with an extensive hydrophobic interface. A surface-exposed groove lined with conserved amino acids is formed at the dimer interface, suggesting a peptide-binding site. Many BTB proteins are transcriptional regulators that are thought to regulate CHROMATIN structure.

J02.500.350.525.250

Butyrivibrio fibrisolvens
A species of Butyrivibrio that occurs primarily in the RUMEN where it has important activities in LIPID METABOLISM and the production of BUTYRATES.

Tree locations:
Butyrivibrio  B03.353.625.250.500

Butyrophilins
A family of mammalian membrane glycoproteins characterized by extracellular IMMUNOGLOBULIN DOMAINS. Some members also have an intracellular B30.2-SPRY DOMAIN or SPRY DOMAIN. The butyrophilin protein (BTN) is expressed by MAMMARY GLAND EPITHELIUM during LACTATION; whereas other members are widely expressed in other tissues, including skeletal muscle, intestine, ERYTHROID CELLS (ERMAP protein); and nerve tissue (MYELIN-OLIGODENDROCYTE GLYCOPROTEIN).

Tree locations:
Membrane Glycoproteins  D12.776.395.550.114
D12.776.543.550.195

C2 Domains
Protein modules that function in the targeting of proteins to CELL MEMBRANES. They consist of an eight-stranded anti-parallel beta-sandwich composed of a pair of four-stranded beta-sheets. This structural unit forms a pocket on the membrane-interacting face of the protein and co-ordinates the binding of 2 to 3 calcium ions; however, not all C2 domains bind calcium. Examples of C2 domain-containing proteins include PROTEIN KINASE C and PTEN PHOSPHOHYDROLASE.

Tree locations:
Protein Domains  G02.111.570.820.709.275.750.125

Calcium Release Activated Calcium Channels
Specialized calcium channels that localize to the ENDOPLASMIC RETICULUM and PLASMA MEMBRANE. They contain the pore subunit ORAI1 PROTEIN which is activated by STROMAL INTERACTION MOLECULES upon intracellular calcium depletion.

Tree locations:
Calcium Channels  D12.776.157.530.400.150.740

New MeSH Headings for 2017
Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

**Cardiorespiratory Fitness**
A measure of the functional capabilities of the heart, lungs and muscles, relative to the demands of specific exercise routines such as running or cycling.

**Case Managers**
Professionals who are in charge of assessment, planning, facilitation, care coordination, evaluation, and advocacy for options and services to meet a patient’s and family’s comprehensive health needs.

**Caspase Activation and Recruitment Domain**
A homotypic protein interaction module of the death domain superfamily. It is composed of a bundle of six alpha-helices that is related in sequence and structure to the DEATH DOMAIN and DEATH EFFECTOR DOMAIN. The Caspase Activation and Recruitment Domain (CARD domain) typically associates with other CARD-containing proteins, forming either dimers or trimers. CARD domains may occur in isolation, or in combination with other domains in CARD signaling adaptor proteins and initiator CASPASES that function in APOPTOSIS.

**CD48 Antigen**
A 40-45 KDa GPI-linked protein in the SLAM family that consists of two IMMUNOGLOBULIN C2-SET DOMAINS. It is expressed on the surface of a variety of cells with immune functions, including THYMOCYTES; mature B-LYMPHOCYTES and T- LYMPHOCYTES; NATURAL KILLER CELLS; DENDRITIC CELLS; MAST CELLS; and EOSINOPHILS. It binds to CD2 and 2B4 (CD244) receptors to activate and modulate the immunologic response.

**CDX2 Transcription Factor**
An antennapedia-like homeodomain transcription factor that regulates the expression of multiple genes in the INTESTINAL MUCOSA. It plays a critical role in many processes from early differentiation to maintenance of the intestinal epithelial lining of both the small and large intestine.

**Cellulite**
Skin lumpiness or skin surface dimpling often seen on the thighs, buttocks and abdomen. It is due to protrusion of SUBCUTANEOUS FAT into the DERMIS layer of skin.

**Cerebral Blood Volume**
Volume of circulating blood in a region of the brain. It is a functional measure of the brain perfusion status which relates changes in this to changes in CEREBROVASCULAR CIRCULATION that are often seen in brain diseases.

**Checkpoint Kinase 1**
A serine/threonine-specific protein kinase which is encoded by the CHEK1 gene in humans. Checkpoint kinase 1 (also known as Chk1) coordinates DNA damage response and cell cycle checkpoint response. Under these conditions, activation of Chk1 results in the initiation of cell cycle checkpoints, cell cycle arrest, DNA repair and cell death, to prevent damaged cells from progressing through the cell cycle.

New MeSH Headings for 2017
Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

**Computed Tomography Angiography**
A non-invasive method that uses a CT scanner for capturing images of blood vessels and tissues. A CONTRAST MATERIAL is injected, which helps produce detailed images that aid in diagnosing VASCULAR DISEASES.

**Tree locations:**
- Multimodal Imaging E01.370.350.567.250
- Tomography, X-Ray Computed E01.370.350.810.335
- E01.370.350.600.350.700.810.335
- E01.370.350.700.700.810.335
- E01.370.350.700.810.810.568
- E01.370.350.825.810.810.499

**Cone-Rod Dystrophies**
Genetically heterogeneous and sometimes syndromic (e.g., BARDET BIEDL SYNDROME; and SPINOCEREBELLAR ATAXIA TYPE 7) retinopathies with initial RETINAL CONE involvement. They are characterized by decreased VISUAL ACUITY; COLOR VISION DEFECTS; progressive loss of peripheral vision and night blindness.

**AN:** ROD CONE DYSTROPHIES see RETINITIS PIGMENTOSA is also available

**Tree locations:**
- Eye Diseases, Hereditary C11.270.152
- C16.320.290.152
- Retinal Dystrophies C11.768.585.658.250

**Connexin 26**
A gap junction protein encoded by the Gap Junction Beta 2 or GJB2 gene. In the cochlea and epidermis, its hexamers form channels between cells that open to allow cell-to-cell diffusion of small molecules as well as recycling of potassium. Mutations in Connexin 26 are associated with congenital SENSORINEURAL HEARING LOSS.

**Tree locations:**
- Connexins D12.776.543.585.250.100

**Conservative Treatment**
Therapeutic approaches that are limited, gradual, or well-established as opposed to radical methods.

**Tree locations:**
- Therapeutics E02.197

**Coracoid Process**
A beak-like bone projection located at the lateral end of the superior anterior border of the SCAPULA.

**Tree locations:**
- Scapula A02.835.232.087.783.356

**Cortical Bone**
A type of osseous tissue which makes up the outer layer of bone. It is dense, rigid, strong, and forms concentric lamellar OSTEONS.

**Tree locations:**
- Bone and Bones A10.165.265.521

**Cortical Excitability**
Measurable changes in activities in the CEREBRAL CORTEX upon a stimulation. A change in cortical excitability as measured by various techniques (e.g., TRANSCRANIAL MAGNETIC STIMULATION) is associated with brain disorders.

**Tree locations:**
- Electrophysiological Phenomena G07.265.216
- Nervous System Physiological Phenomena G11.561.200

**Counselors**
Professionals trained in providing information, guidance, and recommendations to individual clients or families to support their decision making and development of coping skills.

**Tree locations:**
- Occupational Groups M01.526.225

**Coxa Magna**
Deformity of the hip characterized by enlargement and deformation of the FEMUR HEAD and FEMUR NECK, often with associated changes in the ACETABULUM. These changes may be secondary to other diseases (e.g. LEGG-PERTHES DISEASE; ARTHRITIS; HIP DISLOCATION, CONGENITAL) or TRAUMA.

**Tree locations:**
- Bone Diseases C05.116.296

**Crush Injuries**
Excessive compression of parts of the body that causes muscle swelling, fracture, and/or neurological disturbances in the affected areas. Crush injury with systemic manifestations is referred to as CRUSH SYNDROME.

**AN:** note entry term CRUSH FRACTURES: COMPRESSION FRACTURES is also available

**Tree locations:**
- Wounds and Injuries C26.257

New MeSH Headings for 2017
Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

**Cytochrome P450 Family 21**
A cytochrome P450 enzyme family that includes STEROID 21-HYDROXYLASE, which functions in the biosynthesis of STEROIDS.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.493
- System: D08.811.682.690.708.170.463
- D12.776.422.220.453.493

**Cytochrome P450 Family 24**
A cytochrome P450 enzyme family that includes VITAMIN D3 24-HYDROXYLASE.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.496
- System: D08.811.682.690.708.170.493
- D12.776.422.220.453.496

**Cytochrome P450 Family 26**
A cytochrome P450 enzyme family whose members function in the metabolism of RETINOIC ACID. It includes RETINOIC ACID 4-HYDROXYLASE.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.498
- System: D08.811.682.690.708.170.485
- D12.776.422.220.453.498

**Cytochrome P450 Family 27**
A cytochrome P450 enzyme family whose members function in VITAMIN D metabolism and the biosynthesis of BILE ACIDS.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.499
- System: D08.811.682.690.708.170.493
- D12.776.422.220.453.499

**Cytochrome P450 Family 3**
A cytochrome P450 enzyme family that includes members with critical functions in the metabolism of drugs and SEX HORMONES.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.860
- System: D08.811.682.690.708.170.495
- D12.776.422.220.453.860

**Cytochrome P450 Family 4**
A cytochrome P450 enzyme family that includes members which function in the metabolism of FATTY ACIDS, especially ARACHIDONIC ACIDS and their derivatives.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.870
- System: D08.811.682.690.708.170.496
- D12.776.422.220.453.870

**Cytochrome P450 Family 46**
A cytochrome P450 enzyme family that includes CHOLESTEROL 24-HYDROXYLASE, which is expressed primarily in the brain and functions in CHOLESTEROL metabolism.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.875
- System: D08.811.682.690.708.170.497
- D12.776.422.220.453.875

**Cytochrome P450 Family 51**
A cytochrome P450 family that occurs in all EUKARYOTES. Its members function in the biosynthesis of STEROIDS and some are targets of ANTIFUNGAL AGENTS.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.878
- System: D08.811.682.690.708.170.499
- D12.776.422.220.453.878

**Cytochrome P450 Family 6**
A cytochrome P450 enzyme family that occurs in insects. Its members function in the metabolism of XENOBIOTICS.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.880
- System: D08.811.682.690.708.170.880
- D12.776.422.220.453.880

**Cytochrome P450 Family 7**
A cytochrome P450 enzyme family whose members function as steroid 7-alpha hydroxylases.

**Tree locations:**
- Cytochrome P-450 Enzyme: D08.244.453.890
- System: D08.811.682.690.708.170.890
- D12.776.422.220.453.890

<tr>
<td><strong>Dioxins and Dioxin-like Compounds</strong></td>
<td>A group of toxic chemical compounds that share chemical structures and biological characteristics that are related to the potent carcinogen 2,3,7,8-tetrachlorodibenzo-p-dioxin. AN: INDEXER: Do not use</td>
<td></td>
</tr>
<tr>
<td><strong>Discoidin Domain</strong></td>
<td>A protein domain originally identified in DISCOIDINS. It occurs in a variety of unrelated proteins in multicellular organisms, where it recognizes different ligands with distinct biological functions. Structurally, it consists of two antiparallel beta sheets that form a &quot;jellyroll&quot; configuration stabilized by two intramolecular disulfide bonds. Sequence differences within this module determine ligand specificity; in DISCOIDIN DOMAIN RECEPTORS, it binds to FIBRILLAR COLLAGENS and NON-FIBRILLAR COLLAGENS.</td>
<td></td>
</tr>
<tr>
<td><strong>Discoidin Domain Receptor 1</strong></td>
<td>A discoidin domain receptor for FIBRILLAR COLLAGEN that functions in a variety of cellular processes. For example, it regulates cell attachment to the EXTRACELLULAR MATRIX, remodeling of the extracellular matrix, CELL MIGRATION; CELL DIFFERENTIATION; CELL PROLIFERATION; and CELL SURVIVAL.</td>
<td></td>
</tr>
<tr>
<td><strong>Discoidin Domain Receptors</strong></td>
<td>Receptor tyrosine kinases that bind COLLAGENS. They are characterized by the presence of extracellular DISCOIDIN DOMAINS that activate SIGNAL TRANSDUCTION PATHWAYS in response to collagen binding. They may also be cleaved by MATRIX METALLOPROTEINASES to mediate cell interactions with the EXTRACELLULAR MATRIX.</td>
<td></td>
</tr>
<tr>
<td><strong>Discoids</strong></td>
<td>Lectins that were identified in DICYTOSTELIUM DISCOIDEUM. They bind to GALACTOSE and are involved in cell-substratum adhesion, maintenance of morphology during aggregation, and spore formation.</td>
<td></td>

### Dishevelled Proteins
A family of proteins that are key components of the WNT SIGNALING PATHWAY, where they function downstream of FRIZZLED RECEPTORS. They contain an N-terminal dishevelled-AXIN PROTEIN (DIX) domain, which mediates oligomerization; a central PDZ DOMAIN which binds to the frizzled receptor; and a C-terminal DEP domain which facilitates binding to the CELL MEMBRANE. Dishevelled proteins have important functions in CELL DIFFERENTIATION and establishing CELL POLARITY.

**Tree locations:**  
Adaptor Proteins, Signal Transducing D12.644.360.024.288  
D12.776.157.057.025  
D12.776.476.024.376

### Distracted Driving
Behavior which detracts from the focus necessary to operate an automobile safely.

**Tree locations:**  
Automobile Driving I03.125.474

### DNA Ligase ATP
ATP-dependent cellular enzyme which catalyzes DNA replication, repair and recombination through formation of internucleotide ester bonds between phosphate and deoxyribose moieties. Vertebrate cells encode three well-characterized DNA ligases, DNA ligase I, III and IV, all of which are related in structure and sequence. DNA ligases either require ATP or NAD. However, archaebacterial, viral, and some eubacterial DNA ligases are ATP-dependent.

**Tree locations:**  
DNA Ligases D08.811.074.500.500  
D08.811.464.754.600.500

### DNA, Ancient
DNA isolated from fossils or other ancient specimens.

**Tree locations:**  
DNA D13.444.308.065

### Domestication
A systematic process of adapting wild species of animals and plants into new environments often in close association or proximity to humans.

**Tree locations:**  
Agriculture J01.040.330

### Donor Conception
Assisted reproductive techniques where eggs, sperm, both eggs and sperm (double donation), or embryos from donors are used.

**Tree locations:**  
Reproductive Techniques, Assisted E02.875.800.250  
E05.820.800.250

### Double-Stranded RNA Binding Motif
An RNA-binding motif characterized by an alpha-beta-beta-beta-alpha fold that binds DOUBLE-STRANDED RNA. It occurs in many eukaryotic proteins as well as in bacterial and viral proteins.

**Tree locations:**  
RNA-Binding Motifs G02.111.570.820.709.275.500.869.250

### Dynactin Complex
A multi-subunit protein of EUKARYOTIC CELLS. It functions in bidirectional intracellular transport of ORGANELLES and CYTOPLASMIC VESICLES by linking them to DYNEIN and KINESIN.

**Tree locations:**  
Microtubule-Associated Proteins D12.776.220.600.450.150  
D12.776.631.560.225  
Multiprotein Complexes D05.500.142

### Dystonin
A plakin characterized by repeat sequences homologous to SPECTRIN and PLECTIN and C-terminal EF HAND MOTIFS. It functions as an integrator of INTERMEDIATE FILAMENTS, ACTIN and MICROTUBULES in cytoskeleton networks. It is required for anchoring intermediate filaments to the actin cytoskeleton in neural and muscle cells as well as anchoring KERATIN-containing intermediate filaments to HEMIDESMOSOMES in EPITHELIAL CELLS.

**Tree locations:**  
Plakins D12.776.220.790.625

### Ecological Momentary Assessment
Repeated reports by a research participant of symptoms, affect, behavior, and cognition close in time to experience and in the participant's natural environment.

**Tree locations:**  
Psychological Tests F04.711.336
### Educational Personnel
Professionals responsible for teaching in an institution or place of learning such as a school, college, vocational institute, or university.

**Tree locations:**
- Occupational Groups  M01.526.702

### Elbow Tendinopathy
Inflammation (tendinitis) or degeneration (tendinosis) of the tendons of the elbow.

**Tree locations:**
- Tendinopathy  C05.651.869.435  
  C26.874.800.500

### Emergence Delirium
A form of DELIRIUM which occurs after GENERAL ANESTHESIA.

**Tree locations:**
- Delirium  C10.597.606.337.500.500  
  C23.888.592.604.339.500.500  
  F01.700.250.500.500  
  F03.615.350.500  
- Postoperative Complications  C23.550.767.181

### Emergency Medical Dispatch
The mobilization of EMERGENCY CARE to the locations and people that need them.

**Tree locations:**
- Emergency Medical Services  N02.421.297.043

### Emotion-Focused Therapy
Intervention that relies on free expression of emotions with coaching to enhance awareness of emotional experiences.

**Tree locations:**
- Psychotherapy  F04.754.293

### Endamoeba histolytica
Anaerobic parasitic protozoan found in humans and other primates.

**Tree locations:**
- Amoeba  B01.046.500.100.700.089.500

### Endocrinologists
Physicians who specialize in treating ENDOCRINE SYSTEM DISEASES.

**Tree locations:**
- Physicians  M01.526.485.810.303  
  N02.360.810.303

### Endodontists
Dentists specializing in the treatment of injuries and diseases of the DENTAL PULP.

**Tree locations:**
- Dentists  M01.526.485.330.397  
  N02.360.330.397
New MeSH Headings for 2017
Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

### Endoglin
A membrane glycoprotein and ANGIOGENESIS FACTOR that is expressed by cells of the VASCULAR ENDOTHELIUM; VASCULAR SMOOTH MUSCLE; and MONOCYTES. It functions as a co-receptor for TRANSFORMING GROWTH FACTOR BETA and modulates CELL ADHESION. Mutations in the endoglin gene are associated with cases of HEREDITARY HEMORRHAGIC TELANGIECTASIA.

**Tree locations:**
- Antigens, CD: D23.050.301.264.035.294
- Receptors, Cell Surface: D12.776.543.750.250

### Endoscopic Mucosal Resection
A method for removing lesions from gastrointestinal MUCOUS MEMBRANES. The mucosal tissue with the lesion is elevated by injecting a solution into the submucosal layer underneath it. The elevated tissue with the lesion is then cut out.

**Tree locations:**
- Endoscopy, Gastrointestinal: E01.370.372.250.250
- E01.370.388.250.250.230
- E04.210.240.250.230
- E04.502.250.250.250.230

### Endothelin-Converting Enzymes
Metalloendopeptidases which convert BIG ENDOTHELIN to ENDOTHELIN-1.

**Tree locations:**
- Aspartic Acid Endopeptidases: D08.811.277.656.074.500.270
- D08.811.277.656.300.048.270
- Metalloendopeptidases: D08.811.277.656.300.480.229
- D08.811.277.656.675.374.229

### Enhancer of Zeste Homolog 2 Protein
A histone-lysine N-methyltransferase and catalytic subunit of Polycomb Repressive Complex 2. It methylates LYSINE 9 (H3K9me) and LYSINE 27 (H3K27me) of HISTONE H3, leading to transcriptional repression of the affected target gene. EZH2 also methylates non-histone proteins such as GATA4 TRANSCRIPTION FACTOR and the nuclear receptor RORA. It regulates CIRCADIAN CLOCKS via histone methylation at the PROMOTER REGIONS of the circadian genes and its repressive activity is also important for the identity and differentiation of EMBRYONIC STEM CELLS.

**Tree locations:**
- Polycomb Repressive Complex 2: D05.500.781.750.250
- D08.811.913.555.500.800.400.500.500
- D12.776.660.235.600.200.250
- D12.776.664.235.800.200.250
- D12.776.930.780.890.200.250

### Enterococcus hirae
A species of Enterococcus that occurs in the GASTROINTESTINAL TRACT of birds and mammals, and to a lesser extent humans. Some strains cause diseases including DIARRHEA; BACTEREMIA; and ENDOCARDITIS in humans and animals.

**AN:** infection: coordinate IM with GRAM-POSITIVE BACTERIAL INFECTIONS (IM)

**Tree locations:**
- Enterococcus: B03.353.750.250.250.475
- B03.510.550.250.250.475

### Enthesopathy
A disorder occurring at the site of insertion of TENDONS or LIGAMENTS into bones or JOINT CAPSULES.

**Tree locations:**
- Tendinopathy: C05.651.869.653
- C26.874.800.750

**Tree locations:**
- Tendinopathy: C05.651.869.653
- C26.874.800.750
**Epidemiologists**
Qualified medical professionals who study the causes, incidence, and characteristic behavior of disease outbreaks or other health-related conditions and determine the interrelationships of hosts, agents, and environment related to the distribution and control of diseases.

**Tree locations:**
Health Personnel M01.526.485.353
N02.360.345

**Epithelial Cell Adhesion Molecule**
A cell adhesion molecule that is expressed on the membranes of nearly all EPITHELIAL CELLS, especially at the junctions between intestinal epithelial cells and intraepithelial LYMPHOCYTES. It is also expressed on the surface of ADENOCARCINOMA and epithelial tumor cells. It may function in the MUCOSA through homophilic interactions to provide a barrier against infection. It also regulates the proliferation and differentiation of EMBRYONIC STEM CELLS.

**Tree locations:**

**ERG1 Potassium Channel**
One of three members of the ether-a-go-go (EAG) POTASSIUM CHANNELS gene family comprising ether-a-go-go (eag), eag-like (elk) and eag-related (erl) subfamilies. Ether-a-go-go-related gene 1 (ERG1) also known as KCNH2, encodes the pore-forming subunit of a rapidly activating-delayed rectifier potassium channel that plays an essential role in the final repolarization of ventricular action potential. Loss-of-function mutations in human hERG1 is associated with life-threatening ARRHYTHMIA.

**Tree locations:**
Ether-A-Go-Go D12.776.157.530.400.600.900.249.500
Potassium Channels D12.776.543.550.450.750.900.249.500
D12.776.543.585.400.750.900.249.500

**Escherichia coli O104**
An enterohemorrhagic Escherichia coli of the O subfamily that can cause severe FOODBORNE DISEASE. The H4 serotype strain produces SHIGA TOXINS and has been linked to human disease outbreaks, including some cases of HEMOLYTIC-UREMIC SYNDROME, resulting from contamination of foods by feces containing E. coli O104.

**Tree locations:**
Enterohemorrhagic B03.440.450.425.365.300.800.250.250
Escherichia coli B03.660.250.150.180.100.800.250.250

**AN: infection: coordinate IM with ESCHERICHIA COLI INFECTIONS (IM)**

**Eryptosis**
Suicidal death of ERYTHROCYTES which results in features typical of apoptotic nucleated cells such as cell shrinkage, membrane blebbing, and scrambling of cell membrane to expose membrane PHOSPHATIDYLSERINES, which triggers engulfment and degradation by MACROPHAGES.

**Tree locations:**
Apoptosis G04.146.160.295

**Esophageal Mucosa**
Circular innermost layer of the ESOPHAGUS wall that mediates esophageal PERISTALSIS which pushes ingested food bolus toward the stomach.

**Tree locations:**
Esophagus A03.556.875.500.180
Mucous Membrane A10.615.550.146

**Expropriation**
Taking of goods, property, or right of use by GOVERNMENT or others.

**Tree locations:**
economics I01.261.506
Extraintestinal Pathogenic Escherichia coli

Strains of Escherichia coli that possess virulence traits which allow them to invade, colonize, and induce disease in tissues outside of the GASTROINTESTINAL TRACT. They are a cause of URINARY TRACT INFECTIONS (UROPATHOGENIC ESCHERICHIA COLI); neonatal MENINGITIS; SEPSIS; PNEUMONIA; and SURGICAL WOUND INFECTION.

AN: infection: coordinate with ESCHERICHIA COLI INFECTIONS

Tree locations:
- Escherichia coli B03.440.450.425.325.300.580
- B03.660.250.150.180.100.580

Extreme Environments

An ENVIRONMENT which falls outside the range of tolerance for the survival of organisms that are not specifically adapted to survive or thrive in it. Examples of such environments are among the hottest and coldest places on earth.

Tree locations:
- Environment G16.500.275.260

Extremophiles

Organisms specifically adapted to live in EXTREME ENVIRONMENTS.

Tree locations:
- Organism Forms B05.256

Faecalibacterium

A genus of Gram-negative, non-sporing, anaerobic, rod shaped bacteria in the Ruminococcaceae family, order Clostridiales that occur in the human gut.

Tree locations:
- Clostridiales B03.353.625.766
- Gram-Negative Anaerobic Straight, Curved, and Helical Rods B03.440.425.410.413

Faecalibacterium prausnitzii

A species of Faecalibacterium, previously classified in the FUSOBACTERIUM genus, that is a major constituent of the GUT MICROBIOTA in healthy humans. It has anti-inflammatory activity and reduced numbers of this species occur in patients with INFLAMMATORY BOWEL DISEASES such as CROHN DISEASE.

Tree locations:
- Faecalibacterium B03.353.625.766.500
- B03.440.425.410.413.500

Familial Multiple Lipomatosis

A rare autosomal disorder characterized by numerous encapsulated lipomas on the trunk and extremities. The lipomas are usually not painful but can cause pain when growing. In rare cases, one lipoma can become painful and progress to multiple painful lipomas; it is then referred to as Dercum's Disease Type III

Tree locations:
- Genetic Diseases, Inborn C16.320.298
- Lipomatosis C17.800.463.375
- C18.452.584.718.625

Fasciotomy

Surgical incision on the FASCIA. It is used to decompress compartment pressure (e.g. in COMPARTMENT SYNDROMES; circumferential burns and extremity injuries) or to release contractures (e.g. in DUPUYTREN'S CONTRACTURE).

Tree locations:
- Surgical Procedures, Operative E04.321

Fatty Acid-Binding Protein 7

A fatty acid-binding protein expressed by ASTROCYTES during CENTRAL NERVOUS SYSTEM development, and by MALIGNANT GLIOMA cells. It is also expressed by ASTROCYTES in response to injury or ISCHEMIA, and may function in repair of the MYELIN SHEATH.

Tree locations:
- Fatty Acid-Binding Proteins D12.776.157.170.250
- Nerve Tissue Proteins D12.776.631.274
### New MeSH Headings for 2017

Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

#### Fertilins

Sperm surface proteins involved in sperm-egg fusion. They consist of two subunits, fertilin alpha (ADAM1a) and beta (ADAM2), both of which belong to the metalloprotease-disintegrin protein family. The beta subunit does not have catalytic activity.

**Tree locations:**
- ADAM Proteins D08.811.277.656.675.374.102.750
- D09.400.430.500.750
- D12.776.395.033.750
- Membrane Glycoproteins D12.776.395.550.331

#### Fibrillin-1

A fibrillin (FBN1) that functions as a structural support protein for MICROFIBRILS. It also regulates the maturation of OSTEOBLASTS by controlling the availability and concentration of TGF-BETA and BONE MORPHOGENETIC PROTEINS. Mutations in the FBN1 gene are associated with MARFAN SYNDROME.

**Tree locations:**
- Fibrillins D09.400.430.875.500
- D12.776.395.341.500
- D12.776.860.300.400.500

#### Fibrillin-2

A fibrillin (FBN2) that functions to regulate the assembly of ELASTIC FIBERS. Mutations in the FBN2 gene are associated with congenital contractural ARACHNODACTYL.

**Tree locations:**
- Fibrillins D09.400.430.875.750
- D12.776.395.341.750
- D12.776.860.300.400.750

#### Fibrillins

A family of extracellular matrix glycoproteins that is structurally similar to LATENT TGF-BETA BINDING PROTEINS, but contain additional TGF-beta binding domains, in addition to unique domains at their N and C-terminals. Fibrillins assemble into 10-12 nm MICROFIBRILS that function in a variety of cell interactions with the EXTRACELLULAR MATRIX and developmental processes such as ELASTIC TISSUE maintenance and assembly, and the targeting of growth factors to the extracellular matrix.

**Tree locations:**
- Extracellular Matrix Proteins D12.776.860.300.400
- Glycoproteins D09.400.430.875
- D12.776.395.341

#### Fibromatosis, Plantar

A fibromatosis of the plantar fascia characterized by thickening of the fibrous bands on the plantar aponeurosis in the sole of the foot and toes.

**Tree locations:**
- Connective Tissue Diseases C17.300.349
- Contracture C05.651.197.369
- Fibroma C04.557.450.565.590.340.705
- Foot Diseases C05.360.375
- C17.800.321.063

#### Fibromodulin

A small leucine-rich proteoglycan that contains 4 KERATAN SULFATE chains within the leucine repeat region. It interacts with COLLAGEN TYPE I and COLLAGEN TYPE II fibrils and may function to control the rate of EXTRACELLULAR MATRIX assembly. It also sequesters TRANSFORMING GROWTH FACTOR BETA in the extracellular matrix.

**Tree locations:**
- Small Leucine-Rich Proteoglycans D09.698.735.700.813
- D12.776.860.300.806.813

#### Fibronectin Type III Domain

A highly conserved immunoglobulin-like protein domain of about 100 amino acids that forms a beta sandwich structure.

**Tree locations:**
- Immunoglobulin G02.111.570.820.709.275.750.250.500 Domains

#### Fiscal Policy

Use of government spending and taxation to influence the economy.

**Tree locations:**
- Policy I01.655.125

#### Fitness Trackers

Devices used for measuring physical activity as an indication of HEALTH STATUS.

**Tree locations:**
- Diagnostic Equipment E07.230.300

#### Forkhead Box Protein M1

A forkhead transcription factor that is expressed primarily in adult organs which contain proliferating cells such as the thymus, testis, ovary, and small intestine. It controls the expression of CELL CYCLE genes essential for DNA REPLICATION and MITOSIS, and also functions in DNA REPAIR.

**Tree locations:**
- Forkhead Transcription Factors D12.776.260.950.249.063
- D12.776.930.977.249.063
### Forkhead Box Protein O1
A forkhead box transcription factor that is a major target of INSULIN signaling and regulator of metabolic homeostasis in response to OXIDATIVE STRESS. It binds to the insulin RESPONSE ELEMENT (IRE) and the related Daf-16 family binding element (DBE). Its activity is suppressed by insulin and it also regulates OSTEOBLAST proliferation, controls bone mass, and skeletal regulation of GLUCOSE metabolism. It promotes GLUCONEOGENESIS in HEPATOCYTES and regulates gene expression in ADIPOSE TISSUE. It is also an important CELL DEATH regulator. Chromosomal aberrations involving the FOXO1 gene occur in Rhabdomyosarcoma.

**Tree locations:**
- Forkhead Transcription Factors D12.776.260.950.249.250
- D12.776.930.977.249.250

### Forkhead Box Protein O3
A forkhead box transcription factor and transcriptional activator which triggers type 1 programmed cell death (APOPTOSIS) in the absence of APOPTOSIS INHIBITING PROTEINS, including neuronal cell death induced by OXIDATIVE STRESS. It recognizes and binds to the DNA sequence 5'-(AG)TAAA(TC)A-3' and also functions in post-transcriptional regulation of the c-MYC Proto-oncogene.

**Tree locations:**
- Forkhead Transcription Factors D12.776.260.950.249.125
- D12.776.930.977.249.125

### Fracture Dislocation
Fracture of a bone near an articulation with concomitant dislocation of that joint.

**Tree locations:**
- Fractures, Bone C26.404.026
- Joint Dislocations C05.116.359.336
- C26.289.336

### Fractures, Avulsion
Tearing away of the CORTICAL BONE fragment at the location of a strong ligament or tendon attachment. The bone fragment detachment site often occurs near a soft site (e.g., GROWTH PLATE) at the base where LIGAMENTS; TENDONS; or JOINT CAPSULES attach. In younger patients it is most often caused by a sudden forceful pull on a tendon in the opposite direction of the bone movement. In the elderly it is associated with osteoporotic INSUFFICIENCY FRACTURES.

**Tree locations:**
- Fractures, Bone C26.404.038

### Fused-Ring Compounds
Polycyclic compounds with adjacent rings that share the same two adjacent atoms.

**Tree locations:**
- Polycyclic Compounds D04.210

### Gardens
Places provided for the cultivation and/or display of PLANTS.

**Tree locations:**
- Agriculture J01.040.415
- Non-Medical Public and Private Facilities J03.320

### Gastroenterologists
Physicians who specialize in treating diseases of the DIGESTIVE SYSTEM.

**Tree locations:**
- Physicians M01.526.485.810.438
- N02.360.810.438

### Gentianales
An angiosperm plant order that includes the APOCYNACEAE; ASCLEPIADACEAE; GENTIANACEAE; LOGANIACEAE; and RUBIACEAE families.

**Tree locations:**
- Angiosperms B01.650.940.800.575.100.456

### Gene Editing
Genetic engineering techniques that involve DNA REPAIR mechanisms for incorporating site-specific modifications into a cell's genome.

**Tree locations:**
- Genetic Engineering E05.393.420.270

### Geriatricians
Physicians specializing in physiological and pathological aspects of aging and the aged, including the clinical problems of senescence and senility.

**Tree locations:**
- Physicians M01.526.485.810.533
- N02.360.810.533
## New MeSH Headings for 2017

**Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations**

### Giant Cell Tumor of Tendon Sheath

A tumor arising in the SYNOVIAL MEMBRANE; SYNOVIAL BURSA; or TENDON sheath. It is characterized by OSTEOCLAST-like GIANT CELLS; FOAM CELLS; pigmented HEMOSIDERIN-laden MACROPHAGES and inflammatory infiltrate. It is classified either as diffuse or localized tenosynovitis.

**Tree locations:**
- Giant Cell Tumors C04.557.450.565.380.690
- Synovitis C05.550.870.445
- Tendinopathy C05.651.869.762

### Giant Viruses

DNA viruses that have genomes up to several megabases in length and infect primarily single-celled EUKARYOTES.

**Tree locations:**
- DNA Viruses B04.280.356

### Global Burden of Disease

Measure of the burden of disease using the disability-adjusted-life-year (DALY). This time-based measure combines years of life lost due to premature mortality and years of life lost due to time lived in states of less than full health. The metric was developed to assess the burden of disease consistently across diseases, risk factors and regions.

**Tree locations:**
- Health Services Research N05.425.184
- Health Status Indicators N06.850.520.308.980.438.475.091

### Glycodelin

A lipocalin that is the most abundant protein synthesized and secreted by the ENDOMETRIUM from mid-LUTEAL PHASE of the MENSTRUAL CYCLE through early PREGNANCY.

**Tree locations:**
- Glycoproteins D12.776.395.361
- Lipocalins D12.776.157.469.050
- Pregnancy Proteins D12.776.780.426

### Glycogen Synthase Kinase 3 beta

A glycogen synthase kinase-3 type enzyme that functions in ENERGY METABOLISM; EMBRYONIC DEVELOPMENT; and NEUROGENESIS. It is also involved in PROTEIN BIOSYNTHESIS and regulates cell growth and proliferation as a component of the WNT SIGNALING PATHWAY and other signaling pathways. Certain polymorphisms in the GSK3B gene have been associated with PARKINSON DISEASE; ALZHEIMER DISEASE; and BIPOLAR DISORDER.

**Tree locations:**
- Glycogen D05.500.117.875.500
- Synthase Kinase D08.811.913.696.620.700.429.500.500
  - 3 D08.811.913.696.620.700.464.625.500
  - D12.644.360.300.500.500
  - D12.776.476.081.875.500
  - D12.776.476.300.500.500

### Government Employees

Persons employed by the GOVERNMENT.

**Tree locations:**
- Occupational Groups M01.526.446

### Gracilis Muscle

A slender and most superficial muscle in the inner THIGH which originates at the ramus of the PUBIC BONE near the PUBIC SYMPHYSIS and inserts at the proximal medial TIBIA. Its function is to abduct thigh, flex knee, and rotate leg medially. It is a common source of a MYOCUTANEOUS FLAP.

**Tree locations:**
- Muscle, Skeletal A02.633.567.425
**Grid Cells**

Neurons in the ENTRHRINAL CORTEX that project to the HIPPOCAMPUS. Grid cells and PLACE CELLS play a role in cognitive representation of spatial memory and navigation.

**Tree locations:**
- Neurons A08.675.324
- A11.671.322

---

**Gubernaculum**

An embryonic structure that helps guide proper descent of gonads into their final positions. It attaches the caudal end of the fetal GONADS to the developing SCROTUM in male and the labium majorum in female. It gives rise to the caudal ligaments of the gonad: the scrotal ligament in male and the uterine round and proper ovarian ligaments in female. It includes morphofunctional equivalent structures in non-mammals.

**Tree locations:**
- Embryonic Structures A16.551

---

**Hamstring Muscles**

A group of muscles in the posterior THIGH area that are involved in connecting the KNEE JOINT and the PELVIS.

**Tree locations:**
- Muscle, Skeletal A02.633.567.450
- A10.690.552.500.250

---

**Hamstring Tendons**

A group of tendons that attach the HAMSTRING MUSCLES proximally to the PELVIS and to the TIBIA and FIBULA at the KNEE JOINT.

**Tree locations:**
- Tendons A02.880.307

---

**Harassment, Non-Sexual**

The act of systematic and/or continuous unwanted and irritating actions of a non-sexual nature, by a party or group against another. This behavior may include threats, BULLYING, taunts, blackmail, and demands.

**AN:** SEXUAL HARASSMENT is also available

**Tree locations:**
- Social Behavior F01.145.813.213

---

**Healthy Diet**

Dietary patterns which have been found to be important in reducing disease risk.

**Tree locations:**
- Diet G07.203.650.240.629
- Healthy Lifestyle F01.829.458.205.500

---

**Healthy Lifestyle**

A pattern of behavior involving LIFE STYLE choices which ensure optimum health. Examples are eating right; maintaining physical, emotional, and spiritual wellness, and taking preemptive steps against communicable diseases.

**Tree locations:**
- Life Style F01.829.458.205

---

**Heart Rate Determination**

Methods, techniques, and processes by which HEART RATE is measured.

**Tree locations:**
- Heart Function Tests E01.370.370.380.425
- Physical Examination E01.370.600.315

---

**Hemochromatosis Protein**

A membrane protein and MHC class I antigen. It contains an IMMUNOGLOBULIN C1-SET DOMAIN and interacts with BETA 2-MICROGLOBULIN. It may also regulate the interaction of TRANSFERRIN with the TRANSFERRIN RECEPTOR. Mutations in the HFE gene are associated with cases of FAMILIAL HEMOCHROMATOSIS.

**Tree locations:**
- Histocompatibility Antigens Class I D12.776.395.550.489.200
- D12.776.543.550.439.200
- D23.050.301.500.100.363
- D23.050.705.552.100.375

---

**Hepatitis A Virus Cellular Receptor 1**

An Ig domain-containing membrane receptor for HEPATITIS A VIRUS; EBOLA VIRUS; MARBURG VIRUS; and DENGUE VIRUS. It may also function to modulate ASTHMA and HYPERSENSITIVITY.

**Tree locations:**
- Antigens, CD D23.050.301.264.035.320
- D23.101.100.110.320
- Membrane Glycoproteins D12.776.395.550.469
- D12.776.543.550.435
- Receptors, Virus D12.776.543.750.830.187
### Hepatitis A Virus Cellular Receptor 2
An Ig domain-containing membrane receptor that is expressed by TH1 CELLS. It regulates the activation of MACROPHAGES and inhibits TH1-mediated auto- and alloimmune responses to promote IMMUNE TOLERANCE.

**Tree locations:**
- Antigens, CD D23.050.301.264.035.325
- Membrane Glycoproteins D12.776.395.550.479
- Receptors, Virus D12.776.543.750.830.219

### Heterocyclic Compounds, Fused-Ring
Multiple ring heterocyclic compounds containing two or more rings that share two atoms and one bond in common.

**AN:** general or unspecified; prefer specifics

**Tree locations:**
- Heterocyclic Compounds D03.633

### High Fidelity Simulation Training
A controlled learning environment that closely represents reality.

**Tree locations:**
- Simulation Training I02.903.847.250

### High-Intensity Interval Training
A cardiovascular exercise strategy with alternating short periods of intense anaerobic exercise with less-intensive recovery periods.

**Tree locations:**
- Exercise G11.427.410.698.277.187
- I03.350.187

### Histidine Kinase
A member of the transferase superfamily of proteins. In the activated state, protein-histidine kinase autophosphorylates at a histidine residue, subsequently transferring high-energy phosphorly groups to an aspartate residue of the response-regulator domain, which results in a conformational shift in the effector domain. Histidine kinases mediate signal transduction in a wide range of processes involving cellular adaptation to environmental stress.

**Tree locations:**
- Protein Kinases D08.811.913.696.620.682.675

### Homeobox Protein Nkx-2.5
A homeobox-containing transcription factor that functions in heart development. Mutations in the NKX2-5 gene are associated with ATRIAL SEPTAL DEFECTS and TETRALOGY OF FALLOT.

**Tree locations:**
- Homeodomain Proteins D12.776.260.400.234
- Transcription Factors D12.776.930.324

### Homer Scaffolding Proteins
Homer proteins belong to a family of adaptor and scaffold proteins which include Homer1, Homer2 and Homer3. Homer1 and Homer2 play a role in the regulation of calcium homeostasis, whereas Homer3 functions in stimulating changes in actin dynamics in neurons and T-cells. Homer proteins are best known as scaffold proteins at the post-synaptic density where they facilitate synaptic signaling. They function as a molecular switch in metabotropic glutamate receptor (mGluR) signaling, and are associated with human Fragile X syndrome.

**Tree locations:**
- Adaptor Proteins, Signal Transducing D12.776.476.024.381

### Host-Seeking Behavior
Searching behavior by parasitic or commensal organisms, to find animals or plants that are a source of nourishment and habitation.

**Tree locations:**
- Appetitive Behavior F01.145.113.111.527
- Biological Phenomena G16.559

### Huntingtin Protein
A protein that is highly expressed in the nervous system as well as other tissues; its size and structure vary due to polymorphisms. Expanded CAG TRINUCLEOTIDE REPEATS have been identified in the Huntingtin (HD) Gene of patients with HUNTINGTON DISEASE and are associated with abnormal PROTEIN AGGREGATES. Huntingtin interacts with proteins involved in a variety of gene expression and cellular processes; it is also essential for embryonic development.

**Tree locations:**
- Proteins D12.776.441

### Hyperekplexia
A neurological disorder characterized by an excessive startle reaction with ABNORMAL REFLEX; MYOCLONIC JERKS; and MUSCLE HYPERTONIA.

**Tree locations:**
- Central Nervous System Diseases C10.228.590

**New MeSH Headings for 2017**

**Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations**

**Inositol Polyphosphate 5-Phosphatases**
Phosphoinositide phosphatases that catalyze the removal of the 5'-phosphate from INOSITOL 1,4,5-TRISPHOSPHATE or myo-inositol 1,3,4,5-tetrakisphosphate, resulting in inositol 1,4-bisphosphate and phosphate. They have important functions in the metabolism of INOSITOL PHOSPHATES and inositol 1,4,5-trisphosphate signaling pathways such as CALCIUM SIGNALING.

**Tree locations:**
- Phosphoinositide Phosphatases D08.811.277.352.650.624.500

---

**Interferon-Induced Helicase, IFIH1**
A DEAD box RNA helicase that contains two N-terminal CASPASE ACTIVATION AND RECRUITMENT DOMAINS. It functions as a sensor of viral NUCLEIC ACIDS such as DOUBLE-STRANDED RNA and activates the INNATE IMMUNE RESPONSE by inducing the expression of INTERFERON-ALPHA and INTERFERON-BETA. It may also regulate cell growth and APOPTOSIS.

**Tree locations:**
- DEAD-box RNA D08.811.913.445.720.249.875
- Helicases

---

**Interleukin-1 Receptor-Like 1 Protein**
A receptor for INTERLEUKIN-33 that is related structurally to the interleukin-1 receptor. It contains three extracellular IMMUNOGLOBULIN-LIKE DOMAIN regions and associates with INTERLEUKIN-1 RECEPTOR ACCESSORY PROTEIN upon binding IL-33 to initiate signaling. It may function in the response of HELPER T CELLS to INFLAMMATION.

**Tree locations:**
- Receptors, IL D12.776.543.705.852.420.300.375
- Interleukin-1

---

**Intersectoral Collaboration**
Cooperative actions and ventures among health and health-related groups and organizations intended to improve health outcomes.

**Tree locations:**
- Health Services Administration N04.226

---

**Invasive Fungal Infections**
Mycoses which manifest as infections of deep tissue or blood.

**AN: coordinate with specific fungal infection**

**Tree locations:**
- Mycoses C01.703.492

---

**Jagged-1 Protein**
A serrate-jagged protein that functions as a ligand for NOTCH RECEPTORS. It may regulate CELL DIFFERENTIATION in HEMATOPOIESIS and PHYSIOLOGIC ANGIOGENESIS. Mutations in the Jagged-1 gene are associated with ALAGILLE SYNDROME 1.

**Tree locations:**
- Antigens, CD D23.050.301.264.035.438
- D23.101.100.110.438
- Serrate-Jagged Proteins D12.644.276.930.500
- D12.776.157.125.797.500
- D12.776.543.800.500
- D23.529.930.500

---

**Jagged-2 Protein**
A serrate-jagged protein that functions to modulate signal transduction from NOTCH RECEPTORS in CELL DIFFERENTIATION. It may also regulate the expression of CYTOKINES.

**Tree locations:**
- Serrate-Jagged Proteins D12.644.276.930.750
- D12.776.157.125.797.750
- D12.776.543.800.750
- D23.529.930.750

---

**Kefir**
A beverage made from milk fermented by a mixture of endogenous LACTIC ACID-producing yeast and bacteria (KEFIR GRAINS), many of which are PROBIOTICS. It should not be confused with KAFFIR LIME or KAFFIR CORN.

**Tree locations:**
- Cultured Milk Products G07.203.300.350.300.666
- J02.500.350.300.666
- Milk G07.203.100.700.375
- G07.203.300.350.525.375

### Kelch Repeat

An amino acid sequence of about 50 residues long that is composed of X n-long repeats which form a four-stranded anti-parallel BETA-SHEET as a structural component, or blade, of a beta-propeller.

**Tree locations:**
- Amino Acid Motifs
  - G02.111.570.820.709.275.500.500
- Protein Interaction
  - G02.111.570.820.709.275.500.448

  - Repetitive Sequences, Amino Acid
    - G02.111.570.820.709.275.500.500

### Kelch-Like ECH-Associated Protein 1

An adaptor protein characterized by an N-terminal BTB-POZ DOMAIN and six KELCH REPEATS that functions as a substrate for the E3 UBIQUITIN LIGASE complex. It negatively-regulates NF-E2-RELATED FACTOR 2 by targeting it for ubiquitination and degradation by the PROTEASOME. It also represses genes regulated by ANTIOXIDANT RESPONSE ELEMENTS.

**Tree locations:**
- Adaptor Proteins, Signal Transducing
  - D12.644.360.024.306
  - D12.776.157.057.067
  - D12.776.476.024.387

### Kinanthropometry

A measure of human size, shape, proportion, composition, maturation, and gross function; in relation to body movement, physical exercise, fitness, and performance.

**Tree locations:**
- Anthropometry
  - E01.370.600.024.450
  - N06.850.505.200.100.700

### Ku Autoantigen

An ATP-dependent DNA HELICASE that preferentially binds SINGLE-STRANDED DNA. It is a heterodimer consisting of an 80 kDa subunit (XRCC5) and 70 kDa subunit (XRCC6) that functions with DNA LIGASE IV in the repair of DOUBLE-STRANDED DNA BREAKS and V(D)J RECOMBINATION.

**Tree locations:**
- Antigens, Nuclear
  - D12.776.660.625.625
  - D23.050.290.625
- DNA Helicases
  - D08.811.277.040.025.159.155
  - D08.811.399.340.155
- DNA-Binding Proteins
  - D12.776.260.525

### Laboratory Critical Values

Test results which deviate substantially from normal ranges of REFERENCE VALUES or other qualitative results. They trigger CLINICAL LABORATORY SERVICES to place a special alert to ensure PATIENT SAFETY.

**Tree locations:**
- Clinical Laboratory Techniques
  - E01.370.225.828
  - E05.200.828

### Lactobacillus crispatus

A species of Lactobacillus that occurs in the human GASTROINTESTINAL TRACT and the VAGINA of healthy women. It produces LACTIC ACID and HYDROGEN PEROXIDE, and is used as a PROBIOTIC. It is also used for the treatment and prevention of BACTERIAL VAGINOSIS.

**Tree locations:**
- Lactobacillus
  - B03.353.750.450.475.238
  - B03.510.460.400.410.475.475.238

### Lactobacillus gasseri

A species of Lactobacillus that occurs in the human ORAL MUCOSA; GASTROINTESTINAL TRACT; and VAGINA. It produces BACTERIOCINS, can modulate the immune response, and is used as a PROBIOTIC.

**Tree locations:**
- Lactobacillus
  - B03.353.750.450.475.363
  - B03.510.460.400.410.475.475.363

New MeSH Headings for 2017
Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

**National Center for Complementary and Integrative Health (U.S.)**

The mission of NCCIH is to define, through rigorous scientific investigation, the usefulness and safety of complementary and integrative health interventions and their roles in improving health and health care. The Center was established in 1999 and was known as NCCAM National Center of Complementary and Alternative Medicine until 2015.

*AN: add UNITED STATES; research support by this agency is checked as RESEARCH SUPPORT, N.I.H., EXTRAMURAL or RESEARCH SUPPORT, N.I.H., INTRAMURAL; CATALOGER: Use NAF entry*

**Tree locations:**
National Institutes of Health (U.S.) N03.540.348.500.600.640.188

**Neonatal Sepsis**

Blood infection that occurs in an infant younger than 90 days old. Early-onset sepsis is seen in the first week of life and most often appears within 24 hours of birth. Late-onset occurs after 1 week and before 3 months of age.

**Tree locations:**
Infant, Newborn, Diseases C16.614.627
Sepsis C01.539.757.580
C23.550.470.790.500.470

**Neonatologists**

Physicians who specialize in providing medical care to newborn infants.

**Tree locations:**
Pediatricians M01.526.485.810.758.500
N02.360.810.758.500

Qualified medical professionals who specialize in treating KIDNEY DISEASES.

**Tree locations:**
Physicians M01.526.485.810.628
N02.360.810.628

**Network Meta-Analysis**

Meta-analysis of randomized trials in which estimates of comparative treatment effects are visualized and interpreted from a network of interventions that may or may not have been evaluated directly against each other. Common considerations in network meta-analysis include conceptual and statistical heterogeneity and incoherence.

**Tree locations:**
Meta-Analysis as Topic E05.318.780.500.500
E05.581.500.501.500
N05.715.360.780.515.500
N06.850.520.445.500.500

**Neuronal Outgrowth**

Formation of neuronal processes (AXONS; NEURITES) toward a target cell.

**Tree locations:**
Neurogenesis G04.152.912.750
G07.345.500.325.377.687.750
G08.686.784.170.450.500.750
G11.561.620.750

**NF-KappaB Inhibitor alpha**

An I-kappa B protein that inhibits the activity of dimeric NF-KAPPA B P50-REL complexes, sequesters transcription factor NF-kappaB as an inactive complex in the cytoplasm; and prevents NF-kappaB nuclear translocation and DNA binding.

**Tree locations:**
I-kappa B Proteins D12.644.360.378.500
D12.776.260.420.500
D12.776.476.381.500
D12.776.930.326.500
**NIMA-Interacting Peptidylprolyl Isomerase**
A highly-conserved peptidyl-prolyl cis/trans isomerase (PPIase) that binds to and isomerizes specific phosphorylated SERINE- or THREONINE-PROLINE (pSer/Thr-Pro) motifs and causes conformational changes in certain proteins associated with the CELL CYCLE. It displays a preference for an acidic residue N-terminal to the isomerized proline bond and regulates MITOSIS, possibly by attenuating the mitosis-promoting activity of NIMA-RELATED KINASE 1.

**Tree locations:**
Peptidylprolyl Isomerase  D08.811.399.325.500.700

---

**NIMA-Related Kinases**
A highly-conserved family of protein serine-threonine kinases that regulate the CELL CYCLE; MITOSIS; and the response to DNA DAMAGE. They are also involved in the assembly and function of microtubule-based structures such as CILIA and CENTRIOLES.

**Tree locations:**
Cell Cycle Proteins  D12.776.167.457
Protein-Serine-Threonine Kinases  D08.811.913.696.620.682.700.581.500

---

**Nipple Discharge**
Fluid that seeps out of one or both nipples of the breast.

**Tree locations:**
Body Fluids  A12.207.824

---

**Nitrogen-Fixing Bacteria**
Bacteria that are capable of NITROGEN FIXATION.

**Tree locations:**
Bacteria  B03.585

---

**NLR Family, Pyrin Domain-Containing 3 Protein**
An NLR protein that contains an N-terminal PYRIN DOMAIN and ATP-binding site and 9 C-terminal LEUCINE-rich repeats; it is expressed primarily by MACROPHAGES. It is a core component of the INFLAMMASOME and directs its assembly in response to pathogen infection and damage-associated stimuli. Mutations in the NLRP3 gene are associated with FAMILIAL COLD AUTOINFLAMMATORY SYNDROME.

**Tree locations:**
NLR Proteins  D12.644.360.539.250

---

**NLR Proteins**
Intracellular signaling proteins that are defined by the presence of a NUCLEOTIDE-binding region and LEUCINE-rich repeats. Their general structure consists of any of a variety of effector domains at their N-termini such as a caspase recruitment domain (CARD), a central nucleotide-binding domain, and a variable number of C-terminal leucine-rich repeats. They are important for pathogen recognition in the INNATE IMMUNE RESPONSE of animals and plants. Members of the NLR protein family include the NOD SIGNALING ADAPTOR PROTEINS.

**Tree locations:**
Intracellular Signaling Peptides and Proteins  D12.644.360.539

---

**Nogo Proteins**
Myelin proteins that are expressed as three isoforms: Nogo-A, Nogo-B, and Nogo-C. These share a C-terminal reticulon homology domain (RHD), consisting of two hydrophobic membrane domains flanking a 66 amino acid (Nogo-66) hydrophilic region. A long transmembrane region allows conformations that either span the entire membrane or fold into a hairpin conformation. Nogo inhibits NEURITE outgrowth and modulates wiring and the restriction of SYNAPTIC PLASTICITY in the adult central nervous system. It also regulates neurite fasciculation, branching, and extension in the developing nervous system.

**Tree locations:**
Myelin Proteins  D12.776.543.620.738
D12.776.631.580.738

---

**NIMA-Related Kinase 1**
A NIMA-related kinase that functions in CELL CYCLE regulation, the control of CILIA assembly, and CENTROSOME duplication. It is activated at G2 PHASE CELL CYCLE CHECKPOINTS in response to DNA DAMAGE.

**Tree locations:**
NIMA-Related  D08.811.913.696.620.682.700.581.500
Kinas  D12.776.167.457.500
**Nogo Receptor 1**

A high affinity receptor for myelin-associated inhibitors (MAIs) that include NOGO-A PROTEIN; OLIGODENDROCYTE MYELIN GLYCOPROTEIN; and MYELIN-ASSOCIATED GLYCOPROTEIN. It is expressed primarily by neurons in the brain and OLFACTORY BULBS. During embryonic development, it is expressed in the PERIPHERAL NERVOUS SYSTEM. It localizes to GROWTH CONES and may inhibit neurite outgrowth following SPINAL INJURY.

**Tree locations:**
- Nogo Receptors
  - D12.776.395.550.448.738.500
  - D12.776.543.484.500.738.500
  - D12.776.543.550.418.738.500
  - D12.776.543.750.600.500
  - D12.776.631.651.500

**Nogo Receptor 2**

A Nogo receptor that binds to MYELIN-ASSOCIATED GLYCOPROTEIN. It localizes to the GROWTH CONES of neurons in the THALAMUS; CORTEX: AMYGDALA; OLFACTORY BULBS; and HYPOTHALAMUS.

**Tree locations:**
- Nogo Receptors
  - D12.776.395.550.448.738.250
  - D12.776.543.484.500.738.250
  - D12.776.543.550.418.738.250
  - D12.776.543.750.600.250
  - D12.776.631.651.250

**GPI-linked proteins**

GPI-linked proteins consisting of eight elongated leucine-rich repeats at their N-termini that are connected to the GPI by a "stalk" region rich in prolines, serines and threonines. They bind to NOGO PROTEIN; however, some Nogo receptors also bind MYELIN ASSOCIATED GLYCOPROTEIN and other cell surface glycoproteins. Interactions between nogo receptors and their ligands modulate nerve growth and NEURONAL PLASTICITY.

**Tree locations:**
- GPI-Linked Proteins
  - D12.776.395.550.448.738
- Nerve Tissue Proteins
  - D12.776.631.651
- Receptors, Cell Surface
  - D12.776.543.750.600

**Non-Medical Public and Private Facilities**

Spaces and needed equipment provided for a specific, non-medical function or service used by the public or specific group of persons.

**AN:** used for searching; **INDEXER:** Do not use; **CATALOGER:** Do not use

**Tree locations:**
- No Data Available

**Non-Neuronal Cholinergic System**

The system of ACETYLCHOLINE-synthesizing enzymes, transporters, receptors and degrading enzymes that characterize non-neuronal cholinergic cells such as airway and skin EPITHELIAL CELLS.

**Tree locations:**
- Metabolic Networks and Pathways
  - G03.493.628
- Signal Transduction
  - G02.111.820.690
  - G04.835.690

**Non-ST Elevated Myocardial Infarction**

A myocardial infarction that does not produce elevations in the ST segments of the ELECTROCARDIOGRAM. ST segment elevation of the ECG is often used in determining the treatment protocol (see also ST Elevation Myocardial Infarction).

**Tree locations:**
- Myocardial Infarction
  - C14.280.647.500.469
  - C14.907.585.500.656

**Nuclear Pharmacy**

An application of PHARMACY involving the preparation and dispensing of radioactive materials for use in medications.

**Tree locations:**
- Pharmacy
  - H02.646.250

**Nucleons**

Subatomic particles that are either protons or neutrons.

**Tree locations:**
- Elementary Particles
  - G01.249.660
## New MeSH Headings for 2017

**Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations**

### Nucleus Pulposus

- **Fibrocartilage inner core of the intervertebral disc.** Prolapsed or bulged nucleus pulposus leads to **INTERVERTEBRAL DISC DISPLACEMENT** while proliferation of cells in the nucleus pulposus is associated with **INTERVERTEBRAL DISC DEGENERATION.**
- **Tree locations:**
  - Intervertebral Disc: A02.165.308.410.500
  - A02.835.232.834.432.500
  - A10.165.382.350.050.500

### Nurse Specialists

- **Nursing professionals whose practice is limited to a particular area or discipline of medicine.**
- **Tree locations:**
  - Nurses: M01.526.485.650.648
  - N02.360.650.648

### Nurses, Neonatal

- **Qualified nursing professionals specializing in care of newborn infants.**
- **Tree locations:**
  - Nurses, Pediatric: M01.526.485.650.648.940.500
  - N02.360.650.648.940.500

### Occupational Therapists

- **Professionals trained to help individuals develop or regain skills needed to achieve independence in their lives.**
- **Tree locations:**
  - Health Personnel: M01.526.485.710
  - N02.360.710

### Oncologists

- **Physicians specializing in MEDICAL ONCOLOGY or its subspecialties of RADIATION ONCOLOGY or SURGICAL ONCOLOGY.**
- **Tree locations:**
  - Physicians: M01.526.485.810.699
  - N02.360.810.699

### Ocimum sanctum

- **A plant species of the genus OCIMUM, family LAMIACEAE that has been used in TRADITIONAL MEDICINE.**
- **Tree locations:**
  - Ocimum: B01.650.940.800.575.100.583.520.647.750

### Oogonial Stem Cells

- **Primordial germ cells found in embryonic OOGONIA and postnatal OVARIES.**
- **Tree locations:**
  - Stem Cells: A11.872.677

### Open Fracture Reduction

- **Restoration of normal alignment of a fractured bone via an OPERATIVE SURGICAL PROCEDURE.**
- **Tree locations:**
  - Fracture Fixation: E04.555.300.690

### Ophthalmologists

- **Qualified medical professionals specializing in medical and surgical treatment of defects and diseases of the eye.**
- **Tree locations:**
  - Physicians: M01.526.485.810.705
  - N02.360.810.705
## Optometrists
Qualified professionals trained in primary eye and vision care, including measurement of visual abilities, diagnosing disorders of the visual system and provision of treatment such as prescriptions for correction of visual defects with lenses or glasses and vision therapy.

### Tree locations:
- **Health Personnel** M01.526.485.725
- **N02.360.725**

## ORAI1 Protein
The pore-forming subunit of calcium release activated calcium channels. It is activated by STROMAL INTERACTION MOLECULE 1 upon intracellular calcium depletion.

### Tree locations:
- **Calcium Release** D12.776.157.530.400.150.740.500
- **Activated Calcium** D12.776.543.550.450.150.740.500
- **Channels** D12.776.543.585.400.150.740.500

## ORAI2 Protein
A calcium release-activated calcium-like (CRAC-like) channel subunit which functions with STROMAL INTERACTION MOLECULE 1 to regulate cell calcium influx and increase (Ca2+)-selective current.

### Tree locations:
- **Calcium Release** D12.776.157.530.400.150.740.750
- **Activated Calcium** D12.776.543.550.450.150.740.750
- **Channels** D12.776.543.585.400.150.740.750

## Orientation, Spatial
Change in position or alignment in response to an external stimulus.

### Tree locations:
- **Orientation** F01.058.577.500
- **Spatial Behavior** F01.145.875.439

## Orthodontic Friction
Physical resistance to motion between dental surfaces.

### Tree locations:
- **Biomechanical Phenomena** G01.154.090.625

## Orthopedic Surgeons
Physicians specializing in medical, surgical, and physical methods used to treat and correct deformities, diseases, and injuries to the skeletal system, its articulations, and associated structures.

### Tree locations:
- **Surgeons** M01.526.485.810.910.875
- **N02.360.810.910.875**

## Otolaryngologists
Physicians specializing in the treatment of disorders of the ear, nose, and throat.

### Tree locations:

- **B03.510.460.410.645.500**
### Paenibacillus polymyxa
A species of Paenibacillus formerly classified as Bacillus polymyxa that occurs in marine sediments and soil, especially around plant roots and rhizomes where it performs nitrogen fixation. It has activity against several species of pathogenic bacteria and produces polymyxins.

**Tree locations:**
- Nitrogen-Fixing Bacteria: B03.585.860
- Paenibacillus: B03.300.390.400.645.750
- B03.353.500.645.750
- B03.510.100.645.750
- B03.510.415.400.645.750
- B03.510.460.410.645.750

### Parenchymal Tissue
The tissue that constitutes the essential or functional part of an organ (e.g., parenchyma of lung, parenchyma of liver, or parenchyma of kidney).

**AN:** human and animal; palisade parenchyma cells see mesophyll cells is available for plants

**Tree locations:**
- Tissues: A10.806

### Parkinson Disease Associated Proteins
Proteins associated with sporadic or familial cases of Parkinson disease.

**Tree locations:**
- Proteins: D12.776.637

### Patched Receptors
A family of 12-pass transmembrane proteins originally identified in Drosophila that are receptors for hedgehog proteins. They have important roles in regulating cell proliferation, cell differentiation, and body patterning and may also function as tumor suppressor proteins.

**Tree locations:**
- Receptors, Cell Surface: D12.776.543.750.058
- Tumor Suppressor Proteins: D12.776.624.776.633

### Patched-1 Receptor
A patched receptor for several hedgehog proteins that associates with the smoothened receptor to modulate hedgehog signaling. It is also a tumor suppressor protein; mutations in the patched-1 gene are associated with basal cell nevus syndrome; squamous cell carcinoma of the esophagus; trichoepitheliomas; and carcinoma, transitional cell of the urinary bladder.

**Tree locations:**
- Patched Receptors: D12.776.543.750.058.500
- D12.776.624.776.633.500

### Patched-2 Receptor
A patched receptor that may function redundantly with the patched-1 receptor to modulate hedgehog signaling. It may also play a role in epidermal development and as a tumor suppressor protein. Mutations in the patched-2 gene are associated with basal cell nevus syndrome; carcinoma, basal cell; and medulloblastoma.

**Tree locations:**
- Patched Receptors: D12.776.543.750.058.750
- D12.776.624.776.633.750

### Paternal Inheritance
A form of inheritance where the traits of the offspring are paternal in origin due to the expression of extra-nuclear genetic material such as mitochondrial DNA or Y chromosome genes. Centrioles are also paternally inherited.

**Tree locations:**
- Inheritance Patterns: G05.420.623

### Patient Comfort
Patient care intended to prevent or relieve suffering in conditions that ensure optimal quality living.

**Tree locations:**
- Patient Care: N02.421.585.683

### Pathologists
Physicians who assess changes in cellular or tissue structure and function to diagnose disease processes.

**Tree locations:**
- Physicians: M01.526.485.810.746
- N02.360.810.746

### Patient Portals
A secure online website that provides patients convenient 24-hour access to personal health information via an Internet connection.

**Tree locations:**
- Electronic Health Records: E05.318.308.940.968.249.500.500
- Health Records, Personal: E05.318.308.940.968.249.750
New MeSH Headings for 2017
Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

**Patient Reported Outcome Measures**
Assessment of the quality and effectiveness of health care as measured and directly reported by the patient.

**Tree locations:**
Health Care Surveys E05.318.308.980.344.500
N03.349.380.210.500

N04.761.559.590.399.875
N05.715.360.575.575.399.875

**PAX3 Transcription Factor**
A paired box transcription factor that functions in CELL PROLIFERATION; CELL MIGRATION; and APOPTOSIS. It also is involved in MYOGENESIS and neural development. Mutations in the PAX3 gene are associated with WAARDENBURG SYNDROME TYPE 1.

**Tree locations:**
Paired Box Transcription Factors D12.776.260.645.782
D12.776.930.700.782

**PAX6 Transcription Factor**
A paired box transcription factor that has important functions in the development of the eye, nose, central nervous system and pancreas. Mutations in the PAX6 gene are associated with ocular disorders such as ANIRIDIA.

**Tree locations:**
Paired Box Transcription Factors D12.776.260.645.813
D12.776.930.700.813

**PAX8 Transcription Factor**
A paired box transcription factor that functions in the development of THYROCYTES and the control of thyroid-specific gene expression. Mutations in the PAX8 gene are associated with THYROID DYSGENESIS and THYROID NEOPLASMS.

**Tree locations:**
Paired Box Transcription Factors D12.776.260.645.906
D12.776.930.700.906

**Pediatric Emergency Medicine**
Branch of EMERGENCY MEDICINE dealing with the emergency care of children.

**Tree locations:**
Emergency Medicine H02.403.250.500
Pediatrics H02.403.670.450

**Pediatricians**
Qualified medical professionals specializing in maintaining health and providing medical care to children from birth through adolescence.

**Tree locations:**
Physicians M01.526.485.810.758
N02.360.810.758

**Pediocins**
Bacteriocins produced by species of PEDIOCOCCUS. They range from 3.5-4.6 kDa in mass, contain a conserved YNGGVXCK motif and beta sheet at their N-terminals, and a more diverse hydrophobic or amphiphilic C-terminal alpha helical domain. They function as antimicrobial peptides against several pathogenic species of GRAM POSITIVE BACTERIA, including LISTERIA MONOCYTOGENES and are useful as FOOD PRESERVATIVES.

**Tree locations:**
Bacteriocins D12.776.097.151.743
D12.776.543.695.110.850

**Pediococcus acidilactici**
A species of Pediococcus that occurs in fermented foods where its ability to produce LACTIC ACID and PEDIOCINS makes it useful in FOOD PRESERVATION. It is also used as a PROBIOTIC.

**Tree locations:**
Pediococcus B03.353.750.450.737.500
B03.510.550.450.737.500

**Pediococcus pentosaceus**
A species of Pediococcus that occurs in fermented foods where its ability to produce LACTIC ACID and PEDIOCINS make it useful as a FOOD PRESERVATION agent. It is also used as a PROBIOTIC.

**Tree locations:**
Pediococcus B03.353.750.450.737.750
B03.510.550.450.737.750

**Peptidyl-Prolyl Cis-Trans Isomerase NIMA-Interacting 4**
A NIMA-interacting peptidylprolyl isomerase. It binds to double-stranded DNA and functions in the biogenesis of RIBOSOMES.

**Tree locations:**
DNA-Binding Proteins D12.776.260.650
Peptidylprolyl Isomerase D08.811.399.325.500.850
Perfectionism
A personality trait characterized by a person’s striving for flawlessness and setting excessively high performance standards, accompanied by overly critical self-evaluations and concerns regarding others’ evaluations.

Tree locations:
Personality F01.752.823

Perilipin-1
A lipid droplet protein that is expressed primarily by ADIPOCYTES of WHITE ADIPOSE TISSUE and BROWN ADIPOSE TISSUE. It co-localizes with MACROPHAGES and FOAM CELLS of atherosclerotic lesions and stabilizes LIPID DROPLETS by inhibiting HORMONE SENSITIVE LIPASE. It may also protect TRIGLYCERIDES against hydrolysis within the PLASMA MEMBRANE and modulate CHOLESTEROL ESTER HYDROLASE activity.

Tree locations:
Perilipins D12.776.157.464.500.500

Perilipin-2
A perilipin that is expressed by many different cell types. It binds FATTY ACIDS and CHOLESTEROL, stabilizes TRIGLYCERIDES, and localizes to both the surface and hydrophobic core of LIPID DROPLETS, as well as the ENDOPLASMIC RETICULUM and PLASMA MEMBRANE in MACROPHAGES. It also plays a central role in the biogenesis of lipid droplets and FOAM CELLS and is highly expressed by macrophages at atherosclerotic lesions in human arteries along with the INFLAMMATION markers TNF-ALPHA; MCP-1 RECEPTOR; and IL-6.

Tree locations:
Perilipins D12.776.157.464.500.750

Perilipin-3
A perilipin that localizes to LIPID DROPLETS; CYTOPLASM; ENDOPLASMIC RETICULUM; and PLASMA MEMBRANE, especially in MACROPHAGES. It functions as a transporter of free fatty acids to lipid droplets and promotes their biogenesis and growth. It is also required for the transport of the MANNOSE-6-PHOSPHATE RECEPTOR from endosomes to the TRANS-GOLGI NETWORK. Its structure consists of four helix bundles that interact with the hydrophobic lipid droplet surface.

Tree locations:
Perilipins D12.776.157.464.500.875

Perilipin-4
A perilipin protein characterized by an extensive 11-mer repeat region, which forms five adjacent alpha-helices. It is expressed primarily in WHITE ADIPOSE TISSUE and differentiating ADIPOCYTES, as well as skeletal muscle and heart. It is soluble in the cytoplasm but re-localizes to the surface of LIPID DROPLETS under high lipid conditions.

Tree locations:
Perilipins D12.776.157.464.500.906

Perilipins
A family of vertebrate and insect lipid droplet associated proteins. They consist of a conserved N-terminal PAT domain (an alpha-helical region of about 110 amino acids), an 11-mer repeat region, and lipid-binding hydrophobic regions or 4-helix bundles near their C-termini. Perilipins transiently or constitutively localize to LIPID DROPLETS in ADIPOCYTES and FOAM CELLS, especially in regions adjacent to the PLASMA MEMBRANE and ENDOPLASMIC RETICULUM. They are critical for lipid droplet synthesis and homeostasis as well as the regulation of lipid metabolism. Genetic variations in perilipins are associated with ATHEROSCLEROSIS; OBESITY; and DIABETES MELLITUS.

Tree locations:
Lipid Droplet Associated Proteins D12.776.157.464.500

Perilipin-5
A perilipin that functions in LIPOGENESIS; LIPOLYSIS; and fatty acid oxidation in BROWN ADIPOSE TISSUE; heart, liver, and skeletal muscle. It recruits MITOCHONDRIA to the surface of LIPID DROPLETS where it functions in both the storage of fatty acids as TRIGLYCERIDES, and their release for mitochondrial fatty acid oxidation in response to metabolic needs.

Tree locations:
Perilipins D12.776.157.464.500.937

Peripheral Blood Stem Cells
Hematopoietic stem cells found in peripheral blood circulation.

Tree locations:
Hematopoietic Stem Cells A11.872.378.795
### Perirhinal Cortex
An area in the temporal lobe that is important for memory encoding and retrieval. It is bordered caudally by the parahippocampal cortex (see HIPPOCAMPUS) and ventrally and medially by the ENTORHINAL CORTEX.

**Tree locations:**
Temporal Lobe  A08.186.211.730.885.287.500.863.574

### Peroxisome Proliferator-Activated Receptor Gamma Coactivator 1-alpha
A transcriptional co-activator for NUCLEAR RECEPTORS. It is characterized by an N-terminal LxxLL sequence, a region that interacts with PPAR GAMMA, and a C-terminal RNA RECOGNITION MOTIF. It increases expression of MITOCHONDRIAL UNCOUPLING PROTEIN to regulate genes involved in metabolic reprogramming in response to dietary restriction and the integration of CIRCADIAN RHYTHMS with ENERGY METABOLISM.

**Tree locations:**

### Phage Therapy
Therapeutic use of BACTERIOPHAGES to treat diseases.

**Tree locations:**
Biological Therapy  E02.095.841

### Pharmaceutical Research
RESEARCH activity focused on pharmaceutical products and services.

**AN:** pharmaceutical research as a field or the progress or status of pharmaceutical research; do not add routinely for specific pharmaceutical research studies; do not confuse with PHARMACY RESEARCH

**Tree locations:**
Biomedical Research  H01.770.644.145.442

### Pharmacogenomic Testing
The detection of genetic variability (e.g., PHARMACOGENOMIC VARIANTS) relevant to PHARMACOGENETICS and PRECISION MEDICINE. The purpose of such genetic testing is to help determine the most effective treatment options and their optimum dosages with least potential risks for DRUG-RELATED SIDE EFFECTS AND ADVERSE REACTIONS.

**Tree locations:**
Genetic Testing  E01.370.225.562.500  E05.200.562.500  E05.393.438.500  N02.421.308.430.500  N02.421.726.233.221.500

### Pharmacogenomic Variants
Naturally occurring genetic variations associated with drug response (e.g., dosage, extent and rate of metabolic processes). While these variants are not markers for GENETIC PREDISPOSITION TO DISEASE they influence PHARMACOKINETICS and pharmacodynamics and often occur on genes encoding drug metabolism enzymes and transporters (e.g., ANGIOTENSIN CONVERTING ENZYME; CYTOCHROME P-450 CYP2D6).

**Tree locations:**
Polymorphism, Genetic  G05.365.795.446

### Pharmacy Research
RESEARCH activity focused on PHARMACY.

**AN:** pharmacy research as a field or the progress or status of pharmacy research; do not add routinely for specific pharmacy research studies; do not confuse with PHARMACEUTICAL RESEARCH

**Tree locations:**
Biomedical Research  H01.770.644.145.452  Pharmacy  H02.646.375

### Phobia, Social
Anxiety disorder characterized by the persistent and irrational fear, anxiety, or avoidance of social or performance situations.

**Tree locations:**
Phobic Disorders  F03.080.725.500

- **Phosphatidylinositol-3,4,5-Trisphosphate 5-Phosphatases**
  - Phosphoinositide phosphatases that catalyze the dephosphorylation (hydrolysis) of phosphatidylinositol-3,4,5-trisphosphate (PtdIns(3,4,5)P(3)) to produce PtdIns(3,4)P(2), which negatively regulates the PI3K (3-PHOSPHOINOSITIDE-DEPENDENT PROTEIN KINASES) pathways. They contain an SH2 DOMAIN and STERILE ALPHA MOTIF and have important functions in regulating the immune response and other cellular processes in vertebrates.
  - **Tree locations:** Phosphoinositide D08.811.277.352.650.624.750

- **Phototaxis**
  - A behavioral change that results in an organism moving or orienting toward or away from the light source.
  - **Tree locations:** Taxis Response F01.145.113.780.875, F01.145.875.439.500.875, G07.568.500.590.875, G11.427.410.568.850.875

- **Physiatrists**
  - Physicians specializing in treating physical disorders and injuries affecting the brain, spinal cord, nerves, bones, joints, ligaments, muscles, and tendons.
  - **Tree locations:** Physicians M01.526.485.810.764, N02.360.810.764

- **Place Cells**
  - Pyramidal neurons in the HIPPOCAMPUS that play a role in cognitive representation of a specific location within a space.
  - **Tree locations:** Pyramidal Cells A08.675.790.500, A11.671.790.500

- **Placenta Growth Factor**
  - An angiogenic protein belonging to the Vascular Endothelial Growth Factor family of growth factors originally isolated and cloned from human placental cDNA library. There are four isoforms of PLGF 1-4 which result from alternative splicing. Placenta Growth Factor is secreted as a glycosylated homodimer which acts as a mitogen for endothelial cells, and its expression is markedly upregulated during hypoxia and in tissue inflammation and cancer.
  - **Tree locations:** Pregnancy Proteins D12.776.780.551, Vascular Endothelial Growth Factors D12.644.276.100.800.100

- **Pleckstrin Homology Domains**
  - Protein domains of approximately 120 amino acids that form two perpendicular anti-parallel beta sheets connected by a loop of variable length and a C-terminal amphipathic helix. PH domains occur in many INTRACELLULAR SIGNALING PROTEINS and CYTOSKELETAL PROTEINS where they bind PHOSPHATIDYLINOSITOLS within the CELL MEMBRANE and INTRACELLULAR MEMBRANES, as well as proteins that include the Betagamma-subunits of HETEROTRIMERIC GTP-BINDING PROTEINS, and PROTEIN KINASE C. These interactions allow the targeting of proteins to different cellular compartments and SIGNAL TRANSDUCTION PATHWAYS.
  - **Tree locations:** Protein Domains G02.111.570.820.709.275.750.469

- **Pneumonia, Necrotizing**
  - Severe complication of pneumonia characterized by liquefaction of lung tissue.
  - **Tree locations:** Pneumonia C08.381.677.608, C08.730.610.608

- **Pogostemon**
  - Genus in the Lamiaceae family. VOLATILE OILS from several species of Pogostemon are used in PERFUME; INSECT REPELLENTS; and ALTERNATIVE THERAPIES.
  - **Tree locations:** Lamiaceae B01.650.940.800.575.100.583.520.754

---

**Protein Deglycase DJ-1**

A protein deglycase that repairs methylglyoxal- and glyoxal-glycated amino acids and proteins, releasing repaired proteins and lactate or glycolate. It deglycates CYSTEINE, ARGININE and LYSINE residues to reactivate proteins by reversing glycation and prevent the formation of ADVANCED GLYcation END PRODUCTS. It protects cells against OXIDATIVE STRESS and CELL DEATH by functioning as an oxidative stress sensor and redox-sensitive MOLECULAR CHAPERONE and PROTEASE. Mutations in the PARK7 gene are associated with autosomal-recessive, early-onset PARKINSON DISEASE.

**Tree locations:**
Hydrolases D08.811.277.785
Parkinson Disease Associated Proteins D12.776.637.875

---

**Protein Domains**

Discrete protein structural units that may fold independently of the rest of the protein and have their own functions.

**Tree locations:**
Protein Structural Elements  G02.111.570.820.709.275.750
Protein Structure, Tertiary  G02.111.570.820.709.610.500

---

**Protein Phosphatase 2C**

One of four major classes of mammalian serine/threonine specific protein phosphatases. Protein phosphatase 2C is a monomeric enzyme about 42 kDa in size. It shows broad substrate specificity dependent on divalent cations (mainly manganese and magnesium). Three isoforms are known in mammals: PP2C -alpha, -beta and -gamma. In yeast, there are four PP2C homologues: phosphatase PTC1 that have weak tyrosine phosphatase activity, phosphatase PTC2, phosphatase PTC3, and PTC4. Isozymes of PP2C also occur in Arabidopsis thaliana where the kinase-associated protein phosphatase (KAPP) containing a C-terminal PP2C domain, dephosphorylates Ser/Thr receptor-like kinase RLK5.

**Tree locations:**
Phosphoprotein D08.811.277.352.650.625.716
Phosphatases

---

**Proteogenomics**

The systematic study of annotated genomic information to global protein expression in order to determine the relationship between genomic sequences and both expressed proteins and predicted protein sequences.

**Tree locations:**
Proteomics H01.158.201.843.500
H01.158.273.180.350.700.500

**Psacalium**

A genus of the Asteraceae family. Several of its species are used in TRADITIONAL MEDICINE.

**Tree locations:**
Asteraceae  B01.650.940.800.575.100.100.605
New MeSH Headings for 2017
Listed in alphabetical order with Heading, Scope Note, Annotation (AN), and Tree Locations

**Pseudoautosomal Regions**
Homologous chromosomal regions at either end of the X CHROMOSOME or Y CHROMOSOME. These two regions pair regularly at male MEIOSIS and undergo RECOMBINATION. Pseudoautosomal region 1 (PAR1) is located at the tip of the short 'p' arms (Xp22 and Yp11) and Pseudoautosomal region 2 (PAR2) is located at the tip of the long 'q' arms (Xq28 and Yq12).

**Tree locations:**
- Genetic Loci: G05.360.340.024.380.906
- Sex Chromosomes: A11.284.187.865.400, G05.360.162.865.400

**Pseudomonas chlororaphis**
A non-pathogenic species of Pseudomonas that occurs in soil, especially in the RHIZOSPHERE surrounding plant roots, as well as on the leaves of plants. It has anti-fungal and anti-nematode activities and is used in agriculture as a biocontrol agent.

**Tree locations:**
- Pseudomonas: B03.440.400.425.625.625.223
- B03.660.250.580.590.140

**Psychosocial Support Systems**
Organized efforts to address ongoing psychological and social problems of individuals, their partners, families and caregivers.

**Tree locations:**
- Social Support: I01.880.853.500.600.500

**Public Health Systems Research**
A field of study that examines the organization, financing, and delivery of public health services within communities, and the impact of these services on public health.

**Tree locations:**
- Health Care Quality, Access, and Evaluation Research: N05.632

**Punctal Plugs**
Small devices that are inserted into the tear ducts (NASOLACRIMAL DUCTS). They are used to block the drainage of TEARS for the treatment of DRY EYE SYNDROMES.

**Tree locations:**
- Prostheses and Implants: E07.695.698

**PTB-Associated Splicing Factor**
An RNA splicing factor that also binds DNA. It is essential for premRNA splicing in the formation of early SPliceosomes and catalytic step II. It binds specifically to polypurine tract in INTRONS and is involved in the regulation of ALTERNATIVE SPlicing by SIGNAL TRANSDUCTION PATHWAYS.

**Tree locations:**
- DNA-Binding Proteins: D12.776.260.693

**Pulmonologists**
Physicians who specialize in treating disorders of the RESPIRATORY SYSTEM, especially diagnosing and treating diseases and defects of the lungs and bronchial tree.

**Tree locations:**
- Physicians: M01.526.485.810.865, N02.360.810.865

**Pyrin**
A tripartite motif protein that consists of an N-terminal pyrin domain, a central coiled-coil region and B-box type ZIPC FINGER, and C-terminal regions that mediate homotrimmerization and interactions with other proteins (the B30.2/SPRY DOMAIN). It is expressed primarily by mature GRANULOCYTES and associates with the cytoskeleton in the perinuclear area as well as AUTOPHAGOSOMES, where it co-ordinates the assembly of AUTOPHAGY-RELATED PROTEINS and degradation of INFLAMMASOME components. It functions in INNATE IMMUNITY and INFLAMMATION; mutations in the Pyrin protein (MEFV) gene are associated with FAMILIAL MEDITERRANEAN FEVER.

**Tree locations:**
- Cytoskeletal Proteins: D12.776.220.909
- Tripartite Motif Proteins: D12.776.934.750
### Pyrin Domain
A protein interaction domain of the death domain superfamily. It is characterized by a 6-helix bundle similar to those that occur in DEATH DOMAIN RECEPTORS. Pyrin domains are present in a variety of proteins, especially those that function in INFAMMASOMES; AUTOPHAGY; and APOPTOSIS. They form homodimers or heterodimers with death domain proteins to facilitate the assembly of signaling complexes.

**Tree locations:**
- Death Domain
- Superfamily

---

### Radiation Dosimeters
Devices that measure exposure to IONIZING RADIATION.

**Tree locations:**
- Radiation Equipment and Supplies
  - E07.710.725

---

### Radiation Oncologists
Physicians specializing in the treatment of cancer by RADIOTHERAPY.

**Tree locations:**
- Oncologists
  - M01.526.485.810.699.500
  - N02.360.810.699.500
- Radiologists
  - M01.526.485.810.877.500
  - N02.360.810.877.500

---

### Radiologic and Imaging Nursing
A nursing specialty that deals specifically with the care of patients undergoing diagnostic, neurological, cardiovascular, interventional, ultrasonography, computerized tomography, nuclear medicine, magnetic resonance, radiation oncology or other related procedures.

**Tree locations:**
- Specialties, Nursing
  - H02.478.676.772

---

### Receptor, Notch3
A notch receptor characterized by a large extracellular domain containing 34 EPIDERMAL GROWTH FACTOR-like repeats. It functions to regulate CELL DIFFERENTIATION, APOPTOSIS, and CELL PROLIFERATION. Mutations in the EGF repeats of Notch-3 are associated with CADASIL.

**Tree locations:**
- Receptors, Notch
  - D12.776.543.750.725.875
  - D12.776.930.775.250

---

### Regulatory Factor X Transcription Factors
A family of eukaryotic transcription factors that recognize and bind to a highly-conserved cis-regulatory sequence (X-box) within the promoter region of MHC CLASS II GENES. They contain a conserved winged-helix DNA binding domain and function as homo or heterodimers.

**Tree locations:**
- Winged-Helix Transcription Factors
  - D12.776.260.950.624
  - D12.776.930.977.624

---

### Regulatory Factor X1
A regulatory factor X transcription factor that is required for the expression of MHC CLASS II GENES. It also binds to inverted repeats of HEPATITIS B VIRUS DNA and is required for viral gene expression. RFX1 functions as a monomer or heterodimer with other RFX transcription factors.

**Tree locations:**
- Regulatory Factor X Transcription Factors
  - D12.776.260.950.624.500
  - D12.776.930.977.624.500

---

### Retinoic Acid 4-Hydroxylase
A cytochrome P450 enzyme that resides in the ENDOPLASMIC RETICULUM. It catalyzes the conversion of trans-RETINOIC ACID to 4-hydroxyretinoic acid.

**Tree locations:**
- Cytochrome P450 Family
  - D08.244.453.498.500
  - D08.811.682.690.708.170.485.500
  - D12.776.422.220.453.498.500

---

### Retinoic Acid Receptor alpha
A nuclear receptor protein which in humans is encoded by the RARA gene. It belongs to a family of transcription regulators of ligand-responsive regulatory proteins which include steroid hormone receptors. In addition to a C-terminal ligand-binding domain, these nuclear receptors contain a highly-conserved N-terminal zinc-finger domain that mediates binding ligand-responsive elements.

**Tree locations:**
- Receptors, Retinoic Acid
  - D12.776.826.701.250
  - D12.776.930.775.250

Signaling Lymphocytic Activation Molecule Family

Type-I membrane glycoproteins that are expressed primarily on the surface of CD4 or CD8-positive T-CELLS; NATURAL KILLER CELLS; and some populations of B CELLS. They are characterized by an N-terminal, extracellular IMMUNOGLOBULIN-LIKE DOMAIN and a membrane-proximal IMMUNOGLOBULIN C2-SET DOMAIN. SLAMF receptors typically signal through homophilic interactions and are important for mediating the immune response and immune cell differentiation.

Signaling Lymphocytic Activation Molecule Family Member 1

A 70-kDa SLAM family receptor that consists of an extracellular IMMUNOGLOBULIN-LIKE DOMAIN and an IMMUNOGLOBULIN C2-SET DOMAIN. It is expressed primarily by THYMOCYTES and activated T-LYMPHOCYTES, as well as by MACROPHAGES and DENDRITIC CELLS. It binds SLAMF1 receptors on other cells to mediate T-cell maturation and proliferation. It is also a receptor for the MEASLES VIRUS.

### Small Fiber Neuropathy

Disorder of the peripheral nerves that primarily impair small nerve fibers. The affected small nerve fibers include myelinated A-delta fibers (see A FIBERS) and unmyelinated C FIBERS. Because these small fibers innervate skin and help control autonomic function, their neuropathy presents with neuropathic pain, reduced thermal and pain sensitivity, and autonomic dysfunction (e.g., abnormal sweating or facial flushing). Small fiber neuropathy can be idiopathic or associated with underlying diseases (e.g., AMYLOIDOSIS; DIABETES MELLITUS; SARCOIDOSIS; or VASCULITIS).

**Tree locations:**
- Peripheral Nervous System Diseases C10.668.829.860

### Small Leucine-Rich Proteoglycans

A proteoglycan family (SLRPs) that is defined by a central domain which consists of a variable number of repeats of the motif LXXLxLXXXnL, where L may be LEUCINE; Isoleucine; VALINE; or other hydrophobic amino acids. The N-terminal contains four conserved CYSTEINE residues and may be modified depending on function. SLRPs provide structural support to the EXTRACELLULAR MATRIX and are critical for regulating its assembly and dynamics at CELL-MATRIX JUNCTIONS.

**Tree locations:**
- Extracellular Matrix Proteins D12.776.860.300.806
- Proteoglycans D09.698.735.700
- D12.776.395.650.875

### SMARCB1 Protein

A component of the SWI-SNF CHROMATIN REMODELING complex that functions as a PROTEIN PHOSPHATASE 1 regulator and to stabilize CHROMATIN at PROMOTER REGIONS. It is important for regulating CELL PROLIFERATION and CELL DIFFERENTIATION. Mutations in the SMARCB1 gene are associated with malignant RHABDOID TUMORS.

**Tree locations:**
- Chromosomal Proteins, Non-Histone D12.776.660.235.650
- D12.776.664.235.900
- DNA-Binding Proteins D12.776.260.716
- Transcription Factors D12.776.930.809

### Smoothened Receptor

A frizzled-like, G-protein-coupled receptor that associates with PATCHED RECEPTORS to transduce signals from HEDGEHOG PROTEINS and initiate hedgehog signaling to ZINC FINGER PROTEIN GLI1. It may normally inhibit signaling in the absence of SONIC HEDGEHOG PROTEIN binding to PATCHED RECEPTOR-1.

**Tree locations:**
- Frizzled Receptors D12.776.543.750.695.017.500
- D12.776.543.750.850.500.500

### Snail Family Transcription Factors

A transcription factor family characterized by the presence of several C-terminal CY2-HIS2 ZINC FINGERS. They function in many developmental processes including the induction of the EPITHELIAL-MESENCHYMAL TRANSITION; maintenance of embryonic MESODERM; growth arrest, CELL SURVIVAL; and CELL MIGRATION.

**Tree locations:**
- Transcription Factors D12.776.930.815

### Social Segregation

Barriers based on group membership.

**Tree locations:**
- Social Problems I01.880.735.820

### Soluble Guanylyl Cyclase

A mammalian enzyme composed of a heterodimer of alpha and beta subunits. Each subunit consists of four domains; N-terminal HNOX domain, PAS-like domain, a coiled-coil domain, and a C-terminal catalytic domain. All four domains are homologous proteins with a similar conformation of functional domains. Soluble guanylate cyclase catalyzes the formation of cyclic GMP from GTP, and is a key enzyme of the nitric oxide signaling pathway involved in the regulation of a variety of biological and physiological processes in mammals.

**Tree locations:**
- Guanylate Cyclase D08.811.520.650.600.750
- D12.644.360.350.500
- D12.776.476.350.500

### Solute Carrier Proteins

A large diverse group of membrane transport proteins whose families are generally classified according to function. Most SLCs localize to the CELL MEMBRANE; however, some families such as SLC25, localize to MITOCHONDRIAL MEMBRANES or other ORGANELLES.

**Tree locations:**
- Membrane Transport Proteins D12.776.157.530.937
- D12.776.543.585.937

### Streptococcus salivarius
A species of Streptococcus that occurs in the human oral cavity and upper respiratory tract. It is a constituent of DENTAL PLAQUE and some strains may be pathogenic if they enter the bloodstream. However, other strains such as Streptococcus salivarius K12 produce BACTERIOCINS and are used as PROBIOTICS.

**Tree locations:**
- **Streptococcus**: B03.353.750.737.872.663
- B03.510.400.800.872.663
- B03.510.550.737.872.663

### Stroke Rehabilitation
Restoration of functions to the maximum degree possible in a person or persons suffering from a stroke.

**Tree locations:**
- **Neurological Rehabilitation**: E02.760.169.063.500.477.500
- E02.831.477.500
- H02.403.680.600.750.500
- N02.421.784.511.500

### Stromal Interaction Molecule 1
A stromal interaction molecule that functions in the regulation of calcium influx following depletion of intracellular calcium in the ENDOPLASMIC RETICULUM. It translocates to the plasma membrane upon calcium depletion where it activates the CALCIUM RELEASE ACTIVATED CALCIUM CHANNEL ORAI1.

**Tree locations:**
- **Stromal Interaction Molecules**: D12.776.157.125.806.500
- D12.776.543.875.500

### Stromal Interaction Molecule 2
A stromal interaction molecule that functions as a highly sensitive calcium sensor in the ENDOPLASMIC RETICULUM and CYTOSOL. It can regulate CALCIUM RELEASE ACTIVATED CALCIUM CHANNELS in response to minor variations in intracellular calcium.

**Tree locations:**
- **Stromal Interaction Molecules**: D12.776.157.125.806.750
- D12.776.543.875.750

### Stromal Interaction Molecules
Membrane-associated calcium-binding proteins that are characterized by N-terminal EF HAND MOTIFS and a STERILE ALPHA MOTIF. They function as sensors of ENDOPLASMIC RETICULUM calcium levels and translocate from the ER to the plasma membrane to activate CALCIUM CHANNELS in response to intracellular calcium depletion.

**Tree locations:**
- **Calcium-Binding Proteins**: D12.776.157.125.806
- D12.776.543.875

### Struvite
The mineral magnesium ammonium phosphate with the formula NH4MgPO4. It is associated with urea-splitting organisms in a high magnesium, high phosphate, alkaline environment. Accumulation of crystallized struvite is found in the urinary tract as struvite CALCULI and as scale on sewage system equipment and wastewater pipes.

**Tree locations:**
- **Magnesium Compounds**: D01.524.775
- **Phosphates**: D01.029.260.700.675.374.887
- D01.695.625.675.650.887

### Student Run Clinic
Healthcare setting managed by medical personnel in training.

**Tree locations:**
- **Health Facilities**: N02.278.912

### Study Guide
Tool used to help facilitate learning and comprehension of a topic or to help prepare for an examination.

**AN:** This heading is used as a Publication Type. Study guides as a subject are indexed under the main heading STUDY GUIDE AS TOPIC. INDEXER: Do not use

**Tree locations:**
- **Publication Formats**: V02.928

### Study Guide as Topic
Works about use of aids to help facilitate learning and comprehension of a topic or to help prepare for an examination.

**AN:** do not confuse with Publication Type STUDY GUIDE

**Tree locations:**
- **Teaching**: I02.903.923

### Superconductivity
The ability of an element or metallic alloy to allow the passage of ELECTRONS without ELECTRICAL RESISTANCE and expel MAGNETIC FIELDS below a certain threshold temperature called superconducting transition temperature.

**Tree locations:**
- **Electromagnetic Phenomena**: G01.358.500.875
### Superoxide Dismutase-1
A superoxide dismutase (SOD1) that requires copper and zinc ions for its activity to destroy SUPEROXIDE FREE RADICALS within the CYTOPLASM. Mutations in the SOD1 gene are associated with AMYOTROPHIC LATERAL SCLEROSIS-1.

**Tree locations:**
- Superoxide Dismutase  D08.811.682.881.500

### Suppressor of Cytokine Signaling 1 Protein
A suppressor of cytokine signaling protein that consists of an N-terminal kinase-inhibitory region, a central SH2 DOMAIN, a characteristic C-terminal SOCS box (a 40-amino acid motif, which functions to recruit E3 UBIQUITIN-PROTEIN LIGASE COMPLEXES). SOCS1 functions as a negative regulator of CYTOKINES that signal through the JANUS KINASES-STAT 3 TRANSCRIPTION FACTOR (JAK/STAT3) pathway by inhibiting the activity of JANUS KINASES.

**Tree locations:**
- Suppressor of Cytokine Signaling  D12.644.360.024.374.500
- Proteins  D12.776.157.057.249.500
- D12.776.476.024.437.500

### Suppressor of Cytokine Signaling 3 Protein
A suppressor of cytokine signaling protein that consists of an N-terminal kinase-inhibitory region, a central SH2 DOMAIN, a characteristic C-terminal SOCS box (a 40-amino acid motif, which functions to recruit E3 UBIQUITIN-PROTEIN LIGASE COMPLEXES). SOCS3 inhibits cytokine signaling by binding to RECEPTOR PROTEIN- TYROSINE KINASES as well as CYTOKINE RECEPTOR GP130; ERYTHROPOIETIN RECEPTORS; INSULIN RECEPTOR; and the LEPTIN RECEPTOR. Its functions include suppression of ERYTHROPOIESIS in the fetal liver.

**Tree locations:**
- Suppressor of Cytokine Signaling  D12.644.360.024.374.750
- Proteins  D12.776.157.057.249.750
- D12.776.476.024.437.750

### Surgical Oncology
A surgical specialty concerned with management of cancer.

**Tree locations:**
- Medical Oncology  H02.403.429.515.750
- Specialties, Surgical  H02.403.810.796

### Surgical Wound
An incision made during a surgical procedure.

**Tree locations:**
- Wounds and Injuries  C26.859

### Sutureless Surgical Procedures
Surgical techniques in which SUTURES are not applied to surgical wounds.

**Tree locations:**
- Wound Closure Techniques  E04.987.887

### Sustained Virologic Response
The continuous, long-term suppression of VIRAL LOAD, generally to undetectable levels, as the result of treatment with ANTIVIRAL AGENTS.

**Tree locations:**
- Treatment Outcome  E01.789.800.570
- N04.761.559.590.800.665
- N05.715.360.575.575.800.665

### Syk Kinase
An SH2 domain-containing non-receptor tyrosine kinase that regulates signal transduction downstream of a variety of receptors including B-CELL ANTIGEN RECEPTORS. It functions in both INNATE IMMUNITY and ADAPTIVE IMMUNITY and also mediates signaling in CELL ADHESION; OSTEOGENESIS; PLATELET ACTIVATION; and vascular development.

**Tree locations:**
- Intracellular Signaling  D12.644.360.900
- Peptides and Proteins  D12.776.476.913
- Protein-Tyrosine Kinases  D08.811.913.696.620.682.725.650

</table>
**Transcription Activator-Like Effector Nucleases**

Artificial nucleases that cleave DNA at a defined distance from specific DNA sequences recognized by TRANSCRIPTION ACTIVATOR-LIKE EFFECTORS. They are composed of an endodeoxyribonuclease fused to DNA-binding domains of the transcription activator-like effectors.

**Tree locations:**
Endodeoxyribonucleases D08.811.277.352.335.350.850

---

**Transcription Activator-Like Effectors**

Virulence factors of pathogenic plant bacteria, such as XANTHOMONAS species, that bind to specific sequences in the PROMOTER REGIONS of host DNA to induce transcription of specific host genes. Variations in the DNA binding domain of TALE family members account for the variations in DNA specificity. The TALE DNA-binding domains are used in various GENETIC TECHNIQUES by fusing them with various DNA modifying enzymes to detect and manipulate sequence-specific targeted DNA sites.

**Tree locations:**
Bacterial Proteins D12.776.097.890
Trans-Activators D12.776.260.755.700
D12.776.930.900.550
Virulence Factors D23.946.896.490

---

**Transcription Factor HES-1**

A basic-helix-loop-helix transcription factor that functions as a transcriptional repressor for genes transcribed by bHLH proteins. For example, it may negatively regulate MYOGENESIS by inhibiting MyoD1 and ASH1 proteins. It is also required for the stability of FAANCONI ANEMIA COMPLEMENTATION GROUP PROTEINS and their localization to the cell nucleus in response to DNA DAMAGE.

**Tree locations:**
Basic Helix-Loop-Helix Transcription Factors D12.776.260.103.844
D12.776.930.125.844

---

**Transcriptional Regulator ERG**

A trans-activator and member of the erythroblast transformation-specific family of transcriptions factors that contain a characteristic ETS MOTIF. It is required for PLATELET CELL ADHESION to the subendothelium and associates with CHIMERIC ONCOGENE PROTEINS in PROSTATE CANCER; EWING'S SARCOMA; and ACUTE MYELOID LEUKEMIA.

**Tree locations:**
Trans-Activators D12.776.260.755.100
D12.776.930.900.625

---

**Transportation Facilities**

Places such as AIRPORTS, bus stations, and train stations that are used for managing arriving and departing transport vehicles, and included facilities for handling passengers.

**Tree locations:**
Non-Medical Public and Private Facilities J03.970

---

**Trefoil Factor-1**

A 60 amino acid (6.5 kDa) trefoil factor that contains a single trefoil domain. It is expressed primarily by surface EPITHELIAL CELLS of the GASTRIC MUCOSA, where it associates with MUCIN 5AC.

**Tree locations:**
Trefoil Factors D12.644.937.500

---

**Trefoil Factor-2**

A 106 amino acid (12 kDa) trefoil factor that contains two trefoil domains and associates with MUCIN-6. It is expressed in the GASTROINTESTINAL TRACT by cells of BRUNNER GLANDS; PYLORIC GLANDS and mucous neck cells. It inhibits GASTROINTESTINAL MOTILITY and GASTRIC ACID secretion and may help maintain the structural integrity of gastric mucus.

**Tree locations:**
Trefoil Factors D12.644.937.750

---

**Trefoil Factor-3**

A 59 amino acid (6.6 kDa) trefoil factor that contains a single trefoil domain. It is expressed in all tissues with MUCOUS MEMBRANES, including GOBLET CELLS of the SMALL INTESTINE and LARGE INTESTINE. It associates with MUCIN-2 in the small intestine and may regulate epithelial CELL MIGRATION and WOUND HEALING.

**Tree locations:**
Trefoil Factors D12.644.937.875

<tr>
<td><strong>Trefoil Factors</strong></td>
<td>A family of small peptides expressed primarily by MUCOUS MEMBRANE EPITHELIAL CELLS in vertebrates. Their structure is highly conserved and is defined by a three-leaved (trefoil) domain of 42 or 43 amino acids; it includes six cysteines that create the trefoil structure through disulfide bridges. Trefoil peptides may form dimers with each other, or associate with MUCINS and other factors. They are important for maintaining epithelial integrity and for protection from noxious agents.</td>

**Trichodesmium**

A nitrogen-fixing genus of filamentous cyanobacteria that occurs in tropical and subtropical oceans.

**Tree locations:**
- Cyanobacteria B03.280.875
- Nitrogen-Fixing Bacteria B03.585.950

**Tudor Domain**

A conserved, approximately 50 amino acid, protein sequence that adopts a characteristic strongly bent, five stranded anti-parallel beta-sheet barrel-like fold. The Tudor domain recognizes dimethylated ARGinine through its negatively-charged surface and occurs in many proteins that co-localize with RNA; RIBONUCLEOPROTEINS or SINGLE-STRANDED DNA complexes in the CELL NUCLEUS; MITOCHONDRIA; or KINETOCHORES.

### Vaping
The act of inhaling and exhaling vapors produced from ELECTRONIC CIGARETTES.

**Tree locations:**
- Behavior F01.145.979
- Tobacco Use Cessation F01.145.488.750.850

### Vigna
Plant genus in the pea family (Fabaceae).

**Tree locations:**
- Fabaceae B01.650.940.800.575.100.401.976

### Virophages
Circular, double-stranded DNA viruses that invade giant DNA viruses (GIANT VIRUSES) which infect eukaryotes.

**Tree locations:**
- DNA Viruses B04.280.950

### Walk Test
A measure of endurance tests that show how far and fast an individual can walk without stopping within a certain period of time.

**Tree locations:**
- Exercise Test E01.370.370.380.250.500

### Walking Speed
The rate at which steps are made while walking.

**Tree locations:**
- Gait E01.370.600.250.500
  - G11.427.410.568.900.750.500

### WD40 Repeats
Protein interaction motifs of approximately 40 amino acids that usually terminate in TRYPTOPHANE and ASPARTIC ACID. They form characteristic beta-propeller structures and occur in many eukaryotic proteins that function in a variety of cellular processes. Proteins that contain WD40 repeats often function as assembly platforms for MULTIPROTEIN COMPLEXES.

**Tree locations:**
- Amino Acid Motifs G02.111.570.820.709.275.500.927

  - G02.111.570.820.709.275.875.515

### Werner Syndrome Helicase
A DNA-dependent helicase and 3'-5' exonuclease. It has 3'-5' exonuclease activity towards double-stranded DNA with a 5' overhang and binds preferentially to DNA substrates containing alternate secondary structures, such as replication forks and HOLLIDAY JUNCTIONS. Mutations in the WRN gene are associated with WERNER SYNDROME.

**Tree locations:**
- Exodeoxyribonucleases D08.811.277.352.335.375.875
  - D08.811.277.352.365.290.500
- RecQ Helicases D08.811.277.040.025.159.249.500
  - D08.811.399.340.249.500

### Wolfiporia
A genus of wood-decaying, edible fungi in the Polyporaceae family. Its type species is Wolfiporia extensa.

**Tree locations:**
- Polyporaceae B01.300.179.120.760.845

### Wnt-5a Protein
A Wnt protein and ligand for FRIZZLED RECEPTORS that may function as an inhibitor or activator of the WNT SIGNALING PATHWAY. For example, it activates signaling in the presence of Frizzled-4 but is inhibitory when coupled with ROR2 TYROSINE KINASE. It is required for axis formation during EMBRYOGENESIS and inhibits the proliferation, migration, and invasiveness of cancer cells.

**Tree locations:**
- Proto-Oncogene Proteins D12.776.624.664.700.962
  - Wnt Proteins D12.776.467.984.050
  - D23.529.984.050

### Work-Life Balance
The optimal arrangement of an individual’s on-the-job and private time to facilitate health and personal satisfaction without negatively impacting productivity and professional success.

**Tree locations:**
- Social Sciences I01.940
  - Work I03.946.950

### X-Box Binding Protein 1
A basic leucine zipper transcription factor that regulates expression of MHC CLASS II GENES through its binding to a conserved X-box DNA sequence in the promoter region. It regulates the expression of genes involved in the UNFOLDED PROTEIN RESPONSE.

**Tree locations:**
- Basic-Leucine Zipper Transcription: D12.776.260.108.937
- Factors: D12.776.930.127.937

### Xanthorrhoeaceae
A family of flowering plants in the order Asparagales.

**Tree locations:**
- Asparagales: B01.650.940.800.575.100.099.970

### Zinc Finger E-box-Binding Homeobox 1
A transcription factor characterized by N-terminal and C-terminal CYS2-HIS2 ZINC FINGERS separated by a homeobox. It represses the expression of E-CADHERIN to induce the EPITHELIAL-MESENCHYMAL TRANSITION. It also represses PROTO-ONCOGENE PROTEINS C-BCL-6; regulates the cell type-specific expression of SODIUM-POTASSIUM-EXCHANGING ATPASE; and promotes neuronal differentiation.

**Tree locations:**
- Homeodomain Proteins: D12.776.260.400.906
- Repressor Proteins: D12.776.260.703.800
- D12.776.930.780.945

### Zinc Finger Protein GLI1
A transcriptional activator and oncogene protein that contains two CYS2-HIS2 ZINC FINGERS. Two isoforms are expressed; both regulate the expression of specific genes during development of craniofacial features, digits, the CENTRAL NERVOUS SYSTEM; and the GASTROINTESTINAL TRACT. They also regulate SONIC HEDGEHOG PROTEIN signaling and cell proliferation.

**Tree locations:**
- Proto-Oncogene Proteins: D12.776.624.664.700.989
- Trans-Activators: D12.776.260.755.850
- D12.776.930.900.700

### Zona Pellucida Glycoproteins
Membrane glycoproteins that constitute the ZONA PELLUCIDA in mammals and function in the recognition and binding of SPERMATOZOA.

**Tree locations:**
- Egg Proteins: D12.776.290.906
- Membrane Glycoproteins: D12.776.395.550.995
- D12.776.543.550.995
- Receptors, Cell Surface: D12.776.543.750.981
